FOREWORD

Increase in agricultural production is one of the main objectives of our agricultural planning. It is only by the exploitation of scientific methods of agriculture that we can hope to increase our agricultural production to the level needed for maintaining a reasonable standard of living to the country's population. The technical worth of improvement measures is best judged from carefully conducted field experiments. While it is true that a large number of agricultural field experiments are conducted in the country, the results of these experiments have not been brought together in an integrated manner for the use of research workers. The absence of such a unified account has often led to duplication of work and delay in the utilisation of results for practical farming. The Institute of Agricultural Research Statistics has rendered a very valuable service by preparing a compendium of agricultural field experiments conducted in the country. The first series of compendium containing the results of all agricultural field experiments during the period 1948-53 have already been published by the Institute.

The present compendium is the second in the series covering the period 1954-59. As in the earlier compendium, the present series also contains critical summaries of results of experiments bearing on important agronomic factors, such as the response of crops to fertilizers and manures, inter-relationship of fertilizers, varieties and cultivation practices and other information of value for giving sound advice to farmers in different regions. Judging from the demand for the first series of the compendium, I am sure that the present series will also prove equally useful.

A Standing Committee consisting of the Agricultural Commissioner with the Government of India, the Director, Indian Agricultural Research Institute, and the Statistical Adviser, Indian Council of Agricultural Research, has been set up to provide general guidance to the work under this scheme. I congratulate the members of this Committee and, in particular, the Statistical Adviser and his associates at the Institute of Agricultural Research Statistics for bringing out this compendium. The preparation of this compendium has been made possible only by the wholehearted co-operation of the States and other organisations in making available the results of their experimental researches for this purpose. My thanks are due to the officers of the State Departments of Agriculture and other institutions for participating in this work. I hope that the present series will be followed by periodical publications of similar compendia for later years, in order that the availability, in a consolidated form, of results of scientific experiments in agriculture in India may be maintained up-to-date.

NEW DELHI,
March 26, 1965.

A. D. PANDIT
Vice-President,
Indian Council of Agricultural Research.

PREFACE

The present set of volumes form Part II in the series of compendia of Agricultural Field Experiments being published by the Indian Council of Agricultural Research under the project for National Index of Field Experiments and contains a unified record of experiments conducted at agricultural research stations and institutes all over the country. Volumes in Part I in this series were published in 1962 and contained results of some 7,500 experiments conducted during the period 1948-53. The present set of volumes includes results of experiments conducted during the next period that is 1954-59. After the period, covered by Part I of the series, agricultural research and experimentation has expanded so much that for the period 1954-59, to which the present volumes refer, results of more than 15,000 experiments are available.

The present compendium is prepared on the same pattern as the previous one and is divided into 15 volumes one each for (1) Andhra Pradesh, (2) Assam, Manipur and Tripura, (3) Bihar, (4) Gujarat, (5) Kerala, (6) Madhya Pradesh, (7) Madras, (8) Maharashtra, (9) Mysore, (10) Orissa, (11) Punjab, Jammu and Kashmir and Himachal Pradesh, (12) Rajasthan, (13) Uttar Pradesh (14) West Bengal and (15) All Central Institutes. In each volume, background information of the respective state regarding its division into different soils and agro-climatic regions, rainfall and cropping pattern followed in each region and agricultural production and area under different crops in the State is given. The experiments reported in each volume have been arranged crop-wise for each State. All the experiments belonging to a particular crop at various research stations are Grouped together. For a particular crop, experiments are arranged according to the following classification :

Manurial (M), Cultural (C), Irrigational (I), Diseases, pests and chemicals other than fertilizers (D), Rotational (R), Mixed cropping (X) and combinations of these wherever they occur (*e.g.* CM as Cultural-cum-Manurial). Experiments in which crop varieties also form a factor are denoted by adding V to their symbol and are grouped together (*e.g.* MV as Manurial-cum-Varietal).

This publication owes its origin to the guidance and help of Dr. D.J. Finney, F.R.S., Professor of Statistics, Aberdeen University, Scotland, in formulating the project during his stay at the Institute of Agricultural Research Statistics as an F.A.O. expert in 1952-53.

At the Institute of Agricultural Research Statistics the work under the scheme was carried out under the supervision of Shri. T.P. Abraham, Assistant Statistical Adviser. The actual working of the scheme was conducted by Shri G.A. Kulkarni, Statistician till he left the Institute in July, 1964. The work was subsequently taken over by Shri O.P. Kathuria, Assistant Statistician. Messrs. L.B.S. Somayazulu, P.P. Rao, M.L. Sahni, Harbhajan Singh, A.L. Punhani, M.K. Joshi, N.K. Worrier, H.C. Jain and J.K. Kapoor of the statistical staff of the Institute deserve special mention for careful and painstaking work in editing and scrutiny of the manuscript as well as proofs of the compendium.

The burden of collecting the data from the various research stations and the analysis of a large number of experiments once again fell on the regional staff of the Council placed in different States. They deserve to be congratulated for the hard work they have put in.

Thanks are due to the State Departments of Agriculture, the Central Institutes and the Commodity Committees who made the data of the experiments conducted under their jurisdiction readily available to the staff of the Institute. The present publication has become possible only through their unstinted co-operation. The Institute is also thankful to the various

ABBREVIATIONS COMMON TO EXPERIMENTS ON ANNUAL AND PERENNIAL CROPS AND EXPERIMENTS ON CULTIVATORS' FIELDS.

Crops :- In the top left corner is given the name of the crop on which the experiment is conducted. Within brackets along side the crop is mentioned the season wherever the information is available.

Ref :- Against the sub-title 'reference' is mentioned the name of the State, the year in which the experiment is conducted and the serial number of the experiment for that year given in brackets.

Abbreviations adopted for States are as follows :—

- | | |
|---------------------------|------------------------|
| 1. A.P.—Andhra Pradesh | 9. M.—Madras |
| 2. As.—Assam | 10. Mh.—Maharashtra |
| 3. Bh.—Bihar | 11. Ms.—Mysore |
| 4. GJ.—Gujarat | 12. Or.—Orissa |
| 5. H.P.—Himachal Pradesh | 13. Pb.—Punjab |
| 6. J.K.—Jammu and Kashmir | 14. Rj.—Rajasthan |
| 7. K.—Kerala | 15. U.P.—Uttar Pradesh |
| 8. M.P.—Madhya Pradesh | 16. W.B.—West Bengal |

For the experiments conducted under the schemes sponsored by the Indian Council of Agricultural Research like the Model Agronomic Experiments or the Simple Fertilizer Trials scheme no serial numbers have been given at the source as the data of these experiments were collected at the Headquarters (New Delhi). In such cases the abbreviations MAE, SFT or TCM are given in the brackets against the year in which the experiment is conducted.

Site :—Name of the Research Station is mentioned alongwith the place where it is located, e.g. Agri. Res. Stn. for Agricultural Research Station.

For Central Institutes, the corresponding standard abbreviations have been adopted e.g. I.A.R.I. for the Indian Agricultural Research Institute.

In case of the experiments conducted on cultivators' fields whether under an Indian Council of Agricultural Research scheme or by the State Government, the abbreviation (c.f.) is given along with the site or centre as, for example, Cuttack (c.f.).

Type :- Abbreviations used against this item are one or more than one of the following :—

C—Cultural ; D—Control of Diseases and Pests ; I—Irrigational ; M—Manurial ; R—Rotational ; V—Varietal and X—Mixed cropping. e.g. CM is to be read as Cultural-cum-manurial.

Object :- A statement of the objective of the experiment is given indicating the main crop and type of the experiment. In case of M.A.E., S.F.T. and T.C.M. experiments, the type to which the experiment corresponds is also given, e.g. Type V, Type A or B or C etc.

Results :- Information under this heading should be read against the following items :—

(i) General mean. (ii) S.E. per plot. (iii) Results of test of significance. (iv) Summary table(s) with S.E. of comparison(s).

Other abbreviations used in the text of experiments :

- | | |
|----------------------------------|-----------------------|
| Nitro. Phos.—Nitro. Phosphate | A/N—Ammonium Nitrate |
| Ammo. Phos.—Ammonium Phosphate | A/C—Ammonium Chloride |
| A/S—Ammonium Sulphate | C/N—Chilean Nitrate |
| A/S/N.—Ammonium Sulphate Nitrate | N—Nitrogen |
| C/A/N—Calcium Ammonium Nitrate | P—Phosphate |

MAP OF MADHYA PRADESH SHOWING AGRO-CLIMATIC REGIONS AND AGRICULTURAL RESEARCH STATIONS ETC.

MADHYA PRADESH

1. General :

Madhya Pradesh State comprises of vast stretches of land in the middle of India, having the States of Uttar Pradesh in the north, Andhra Pradesh in the south, Maharashtra and Gujarat in the west and Orissa in the east, with an area of about 171 lakh sq. miles. It extends between 17° 45' to 26° 52' North latitude and 74° 2' to 84° 24' East longitude. The land utilization statistics of the State are given in table 1 below :

TABLE 1
Land utilization statistics of Madhya Pradesh (1963—64)
(Area in '000 acres)

1. Total area as per village papers	109,204
2. Forests	36,027
3. Land put to non-agricultural uses	4,952
4. Barren and unculturable land	5,304
5. Permanent pastures and other grazing lands	10,124
6. Land under miscellaneous tree crops	905
7. Culturable waste	6,021
8. Fallows other than current fallows	2,293
9. Current fallows	1,850
10. Net area sown	40,826
11. Total cropped area	46,316
12. Area sown more than once	5,490

2. Topography :

The state can be divided into the following broad physical regions :

(a) Gird Region : It is a low lying region covering about 18,370 sq. miles and includes areas north and north-east of Gwalior extending over greater part of Bundelkhand and upto Kaimun hills in Baghelkhand.

(b) Malwa Plateau : It is a wide table land with a mean elevation of about 1,600 ft. above the sea level. It covers an area of about 34,600 sq. miles and is situated between Vindhyan Barrier and points just south of Gwalior.

(c) Satpura Ridge : This ridge stretches across the state from Maikala range in the east towards Nimar in the west with an average elevation of about 2,000 ft. above the sea level. It forms the water shed of the plains lying northwards of the ridge.

(d) Narmada Valley : This is a long and narrow strip of about 200 miles with a width of about 20 miles, lying between Vindhyan and Satpura ranges.

(e) Chhatisgarh Plains : These lie towards east of Satpura range and are fairly level except for a few undulations of Hazaribagh range and Korea Hills.

The Vindhyan range lying north-east, south-west almost runs in the middle of the state. The important rivers towards north of this range are the Chambal, the Betwa and the Sone and towards south the Narmada, the Mahanadi and the Indravati.

3. Soil :

The main soil types found in Madhya Pradesh are alluvial, deep black, medium. black, shallow or light black, mixed red black, mixed red and yellow and skeletal or gravelly

The fertile alluvial soil, well supplied with potash and lime but poor in phosphoric acid, nitrogen and humus, is capable of growing a variety of crops such as rice, wheat and sugarcane. It is found in Morena, Bhind and Gwalior. The soil of Sheopur (Morena district) is black in colour, clayey in texture, low in soluble salts, neutral in reaction and have a layer of calcium carbonate at a depth of two to four feet. The soil of Jora (Morena district) is yellowish brown and less clayey while that of Bhind is yellow in colour and lighter in texture. In Gohad (Bhind district) saline and alkaline patches have developed due to improper drainage.

The black soil occupies almost half of the state and mainly covers the area of Malwa plateau, Narmada valley and Satpura ridge. It varies in depth from a couple of feet to several feet and is usually loamy to clayey in texture. Lime concretion zone and free calcium carbonate are invariably present at different depths. Cracks develop in summer season and in deep clayey soil, they are even three to four feet deep. This soil is usually ill supplied with phosphate, nitrogen and organic matter but is generally sufficient in potash and lime and is suitable for cotton cultivation though other crops like *jowar*, wheat, sugarcane, groundnut etc., also grow well. This soil has three sub-types (a) deep black soil (b) medium black soil and (c) shallow black soil.

(a) The deep black soil covers a major part of Narmada valley and open and level portions of Vindhya and Satpura plateau especially the areas of Hoshangabad and Narsimhapur districts. This soil has been further sub-divided as black, dark brown, coarse brown, mixed and sandy. The black soil is very good for wheat and a variety of other crops, while others are somewhat poor. The clay percentage in these soils varies from 20 to 60.

(b) Medium black soil is the largest in the group of black soils and covers the major portion of Malwa plateau including districts of Sidhi, Shahdol, Jabalpur, Damoh, Sagar, East Nimar, Raisen and Sehore and southern part of Shivpuri district. This soil is not very deep and is suitable for most of the crops especially wheat, cotton, sugarcane, *jowar* groundnut, etc. The soil of Jabalpur, Sagar, Mandsaur and Shajapur districts contain 20 to 40 per cent clay while in Bhilsa, Guna, Dhar, Ujjain and Dewas districts the percentage of clay varies from 30 to 55.

(c) Shallow black soil is primarily spread over the region of Satpura ridge and covers Seoni, Chhindwara and Betul districts. It consists of shallow loams having clay percentage of 15 to 30. The important types found are dark brown, clay and loamy soil, black soil and poor light hilly soil.

Mixed red and black soil is prevalent in eastern part of the Gird region and Rewa, Satna, Panna, Chhatarpur, Tikamgarh and Datia districts and a part of Shivpuri district. The major characteristics of the red soil are light texture, absence of lime concretions and free carbonates. The commonest form of this soil is sandy clay and it differs greatly in depth and fertility and produces large varieties of crops under irrigation. It is generally deficient in nitrogen, phosphoric acid, organic matter and lime.

Red and yellow soil is found in the Chhatisgarh plains and includes the Balaghat district and part of Raigarh, Surguja and Bastar districts. Mixed red and yellow soil occurs in this area, which is mostly suited for rice crop. The soil is generally light and sandy, though the medium and heavy varieties are also found. Calcium is usually present in the exchangeable form and it is poor in phosphoric acid, humus and nitrogen.

In Durg, Bilaspur and Balaghat districts, deep clay soil with lime stones, yellow sandy soil and mixture of these two with a medium texture predominates. In Raipur district red and stony poor soil is also found, while in Balaghat district dark alluvium covers the area round about the rivers.

skeletal or gravelly soil consists of stony uplands of the Vindhya and Satpura ranges and covers part of Shahdol, Mandla, Surguja, Raigarh, Bastar and Jhabua districts. It usually grows inferior millets and oilseeds. Generally it is poor, though some patches of good black soil are also found where crops like rice, wheat etc. are grown.

4. Climate and rainfall :

The climate of the state is dry, cool in winter and hot in summer in the north, cool and breezy in the Malwa plateau and generally wet and humid in the eastern and southern parts with mild winters and hot summers.

A large part of Madhya Pradesh receives rainfall between 30" to 60". It is only Bastar and Surguja districts which receive rainfall more than 60 inches. The northern districts of Morena, Gwalior, Bhind and Datia form a dry zone receiving about 30 inches of rainfall. In general the rainfall decreases from south-east to north-west of the state and accordingly the crops also change from rice to wheat and cotton to *jowar*.

Based on the types of soil and the climatic and rainfall conditions obtained, the state can be divided into the agro-climatic regions given in Appendix No. 1.

5. Irrigation :

The State of Madhya Pradesh has a total irrigated area of about 2537 thousand acres which accounts for about 6.3% of the net cropped area. The extent of area irrigated through different sources is given below in table 2.

TABLE 2
Area irrigated through different sources (1963-64)
(Area in '000 acres)

Source	Acreage	% of total irrigated area
1. Government canals	1210.0	47.7
2. Private canals	2.5	0.1
3. Tanks	342.5	13.5
4. Wells	887.9	35.0
5. Other sources	93.9	3.7
	2536.8	100.0

6. Agricultural production and normal cropping pattern :

Madhya Pradesh is generally regarded to comprise of three crop zones, viz., rice zone, wheat zone and *jowar* zone, the last one also being known as the cotton-*jowar* zone, because the major *jowar* growing districts also grow cotton.

Some of the districts are, however, major with regard to more than one crop. Thus districts of Satna, Rewa, Jabalpur and Seoni are major with regard to the areas of both rice and wheat. Similarly the districts of Morena, Bhind, Gwalior, Datia, Panna, Shivpuri and Guna are major from the view point of the area of both *jowar* and wheat.

The state can be distinctly divided into the following crop zones.

Zone	Districts included
Cotton- <i>jowar</i>	Indore, Dhar, Rajgarh, Shajapur, Mandsaur, Ratlam, Ujjain, Dewas, Jhabua, Khandwa and Khargone.
Wheat	Vidisha, Raisen, Sagar, Damoh, Sehore, Hoshangabad, Narsimhapur.
Wheat- <i>jowar</i>	Morena, Gwalior, Bhind, Chhatarpur, Tikamgarh, Datia, Shivpuri, Panna, Guna, Betul and Chhindwara.
Wheat-rice	Rewa, Satna, Jabalpur, Seoni and Mandla.
Rice	Raipur, Durg, Bilaspur, Balaghat, Raigarh, Bastar, Surguja, Sidhi and Shahdol.

The table gives below the acreage under different crops, production and average yield per acre.

TABLE 3

Area, production and average yield per acre of principal crops (1963-64)

Crop	Area in '000 acres	Production in '000 tons	Av. yield in lb./ac.
Paddy	10410	3131	674
Wheat	7957	1845	519
Jowar	5170	1355	587
Bajra	469	136	649
Maize	1226	598	1092
Ragi	33	4	271
Barley	440	106	540

**Bales of 392 lb. each.

@Bales of 400 lb. each.

7. Experimentation and Agricultural Research :

In all 644 experiments conducted during the period 1954-59 were reported from this state. Besides, 201 experiments conducted under the Model Agronomic and Simple Fertilizer Trial Schemes of the Indian Council of Agricultural Research and the experiments conducted on cultivators' fields by the state are also included in the compendium for this period. Adhartal, Betul, Chhindwara, Durg, Indore, Labhandi, Nabi-bagh, Powarkheda and Reora are the major agricultural research stations of the state. About 48.3% of the experiments are purely manurial type while those with manurial treatments are about 65.4%. Maximum number of trials (35.0%) are conducted on wheat crop followed by paddy (23.7%). The crop and type-wise break up of the experiments is given in Appendix No. II.

About 77% experiments were laid out in randomised blocks and latin squares with one or more factors constituting the treatments. About 13% of the experiments were laid out in split-plots and strip-plots. Experiments with confounding arrangement of factors in randomised blocks or split-plot designs accounted for the remaining 10% of the experiments.

The number of plots per block in randomised block design varied from 2 to 64. In split-plot design the number of main-plots per replication varied from 2 to 12 and number of sub-plots per main-plot varied from 2 to 20. The number of replications in general varied from 1 to 8. The size of net plot in case of randomised block design ranged from 1/1936 of an acre to 1/10 of an acre while in the split-plot design it ranged between 1/453.75 of an acre to 1/30 of an acre.

APPENDIX No. I

Agro-climatic regions in Madhya Pradesh with details regarding climate, soil type and cropping pattern

Region	Districts	Temp. in C°		Rainfall in cms.	Soil type	Cropping pattern	
		Min.	Max.			Kharif	Rabi
Malwa Plateau	Indore, [Dhar, Rajgarh, Shajapur, Mandasaur, Ratlam, Ujjain, Dewa, Jhabua	5	44	75—100	Heavy to medium black soil	Cotton, Jowar, Groundnut	Wheat, Gram Linseed
Nimar Plateau	Khandwa, Khargone	5	46	55—95	Well drained medium black cotton soil. In Khargone light soils are also found	Cotton, Jowar, Groundnut	
Vindhya Plateau	Vidisha, Raisen, Sagar, Damoh, Sehore	8	43	100—135	Deep alluvial deposited soil	Jowar	Wheat, Gram, Linseed
Narmada Valley	Hoshangabad and Narsimhapur	10	42	115—125	Deep black	Jowar, Sesamum	Wheat, Gram
Gird Region	Morena, Bhind, Gwalior	2	46	65—75	Alluvial soil subject to erosion	Jowar, Bajra	Wheat, Gram,
Bundelkhand	Chhatarpur, Tikamgarh, Datia, Shivpuri, Panna, Guna	1	45	70—120	Mixed red and black	Jowar, Sesamum	Rape, Mustard
Satpura Plateau	Betul, Chhindwara	8	41	95—110	Shallow black soil	Jowar, Groundnut	Wheat, Gram
Kymore Plateau and Satpura hills	Rewa, Satna, Jabalpur, Seoni, Mandla	8	41	110—120	Mixed soils	Rice, Jowar	Wheat, Gram
Chhatisgarh Plains	Raipur, Durg, Bilaspur, Balaghat, Raigarh, Bastar	8	45	115—130	Light and sandy yellow soils	Groundnut	Linseed
Chhatisgarh Plateau and other adjoining areas	Sidhi, Surguja, Shahdol	7	42	115—160	Light and sandy yellow soils	Rice, Sesamum	Rape, Mustard

APPENDIX No. II

Distribution of experiments crop-wise and type-wise

Crop	M	MV	C	CV	CM	CMV	(I+IM+IC+ICMV)	D	Total

PARTICULARS OF RESEARCH STATIONS AND SOIL ANALYSIS

1. Government Agricultural Research Station, Adhartal.

A. General information :

(i) Jabalpur district, 4 miles from Jabalpur Railway Station. Plain and level land but the fields are not properly levelled. (ii) It represents rice—wheat tract. (iii) Established in 1912. (iv) The farm is having three sections (a) *Adhartal* : It is paddy growing area. A second crop in *rabi* season after paddy is taken. (b) *Kheri*—Haveli tract : *Rabi* crops are grown in the area. (c) College estate : Mainly *rabi* crops are grown. Some area having sandy soils is treated as *khariḥ* paddy area. (v) Research on different aspects of paddy and wheat crops.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
177	466	441	359	41	31	3	41	2	42	1	23	1630

(The period on which av. rainfall is based is not available).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation available for paddy and wheat crops for about 100 acres of the farm from Irrigation Department. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) *Sahara* : It is light brown, 4" deep. *Domatta* : It is brown and 6" deep. *Kabar* : It is black and 9" deep. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—28, Wheat—32, Gram—3, Mixed pulse—3, Linseed—1 and Mixed cropping—3, Total=70.

2. Government Seed and Demonstration Farm, Amlaha.

A. General information :

(i) In Ashta taluka of Sehore district, 15 miles from Sehore Railway Station. (ii) It represents medium black cotton soil. (iii) Established in 1934. (iv) *Jowar*, cotton and groundnut in *khariḥ* and wheat and gram in *rabi*. (v) Mainly varietal trials on cotton to evolve suitable varieties are conducted.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
52	227	367	447	48	8	6	2	7	8	4	3	1177

(Av. rainfall is based on four year data for the period 1960 to 1963).

C. Irrigation and drainage facilities :

(i) (a) Irrigation through wells. (b) Indegenous *moat* upto 1963 and oil engine pump set afterwards. (ii) No proper drainge system exists.

D. Soil type and soil analysis :

(i) Black soil, clayey in structure upto 1½' to 2'. (ii) Chemical analysis : pH varies from 7.3 to 7.6, N from 64 to 118 lb./ac., P from 10.4 to 38.4. lb./ac., available K is medium,

organic carbon from 0.32% to 0.59% and available soluble salts are normal. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—5, *Jowar*—1, Cotton—2. Total=8.

3. Regional Research Station, Bagwai.

A. General Information :

(i) District Gwalior, the farm is at a distance of 15 miles from Darba Railway Station. The experimental area is comprised of well levelled small size fields with small bunds. (ii) The research station represents Harsi tract of north-west, M.P. with extreme temperatures both in summer and winter (iii) The farm was established in 1940. (iv) Paddy, wheat and sugarcane are the three main crops grown on the station. G.M. (*sanai*),—Sugarcane—*ratoon*—Paddy—wheat or gram is the cropping pattern followed. (v) Conducting varietal, cultural and manurial trials on sugarcane.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
214	270	320	102	51	52	25	—	—	—	—	—	1034

(The period on which av. rainfall is based is not available).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation by canal is available since 1936. (ii) *Kachcha* drainage have been constructed on the lower side of every field mostly opposite to the irrigation channels.

D. Soil type and soil analysis :

(i) (a) Clayey and clay-loam with good percentage of silt and sandy clay. There are deep soils extending generally up to the depth of 10 ft. to 15ft. They are mostly dark brown or black in colour. The soils are extremely cohesive and form hard clods with a slight neglect in handling them. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—3. Total=3.

4. Government Agricultural Farm, Baroda.

A. General information :

(i) In the district of Morena, 14 miles from Sheopur Kalan Railway Station. Paddy experimental area is levelled and groundnut experimental area is slopy. (ii) It represents *Jowar*—wheat tract. (iii) Established in the year 1955. (iv) (a) G.M.—wheat—gram; (b) Paddy—gram—paddy. (v) Manurial cultural and irrigational trials on paddy, groundnut, wheat, gram and linseed etc.

B. Normal rainfall in mm.

June	July	Aug.	Sept.	Oct.	Nov.	Dec. to May	Total
18	178	402	91	11	6	—	706

(Period on which the av. rainfall is based is not available).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation facilities are available from 1960. (ii) There exists a proper drainage system.

D. Soil type and soil analysis :

(i) Clay loam of dark brown to dark grey colour to a depth of 6'. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—1. Total=1.

5. Government Seed and Demonstration Farm, Betul.**A. General information :**

(i) In Betul district, 7 km. from Betul Railway Station. The land is slopy from east to west. The shape of the farm is irregular. It is situated on Itarsi-Nagpur Road. (ii) It represents Satpura tract. (iii) Established in the year 1915. (iv) Fallow—wheat—G.M.—sugarcane. (v) Varietal trials on wheat are conducted.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
102	330	502	—	25	34	16	—	5	13	17	.5	1049

(Period on which av. rainfall is based is not available)

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation is done by canal and wells. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) Morand II of black colour and of granular structure to a depth of 6" to 25.33". (ii) Chemical analysis :—pH 7.3 to 7.9, Conductivity 0.01 to 0.1, % Organic Carbon 0.14 to 0.36, available N 58 to 162 lb./ac. and available P_2O_5 9.6 to 44.0. lb./ac. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—23, Gram—1, Mixed pulse—1. Total=25.

6. Government Agricultural Farm, Bhind.**A. General information :**

(i) In the district of Bhind, one mile from Bhind Railway Station. The fields are not levelled and it is difficult to irrigate all plots properly. (ii) It represents *jowar*—wheat tract. (iii) Established in 1959. (iv) Cropping pattern are *bajra* and *Jowar* in *khurif* and wheat, gram and linseed in *rabi*. (v) Manurial and varietal trials.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan to April	May	Total
72	228	235	316	—	12	4	—	2	869

(The av. rainfall is for the year 1963—64).

C. Irrigation and drainage facilities :

(i) (a) and (b) Sewage water from 1959. (ii) No drainage system exists. Being a sandy loam soil of the farm, it is already well drained and drainage problem never arises.

D. Soil type and soil analysis :

(i) Sandy loam to loam of yellowish brown colour. (ii) Chemical analysis : pH 7.5, Conductivity 0.3, Organic Carbon 0.16 %, available N 72 lb./ac. and available P 36.48 lb./ac. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—1 Total=1.

7. Government Seed and Demonstration Farm, Biora.

A. General information :

(i) In the district of Raigarh, 43 miles from Shujalpur Railway Station. Slopy and undulating land. (ii) It represents cotton—*jowar* tract. (iii) Established in the year 1942. (iv) Wheat—followed by gram. (v) Agronomic experiments on wheat, *jowar* etc.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan. to May	Total
755	2644	4211	2378	155	645	130	—	10918

(Period on which the av. rainfall is based is not available).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation facilities are available since 1956. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) Black and yellow to a depth of 2 ft. to 3 ft. of Morand structure II. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—3, *Jowar*—6, Mixed cropping—3. Total=12.

8. Government Experimental Station, Chhindwara.

A. General information :

(i) In district Chhindwara, 3 miles from Chhindwara Railway Station. The site of the farm is roughly rectangular. The land gradually slopes from north to south. There is a stream in the middle of the farm. The site is bounded by cultivated land of Chandangaon village in east and south and Chhindwara—Nagpur Road in the west. (ii) It represents Satpura plateau. (iii) Established in the year 1919. (iv) Cropping pattern is Paddy—wheat—*berseem*, groundnut—legumes—vegetable, G.M.—wheat, potato—sugarcane and maize—wheat. (v) Multiplication of seeds and agronomical experiments on different crops.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
50	114	123	121	22	8	7	20	4	5	6	6	477

(The av. rainfall is based on the data of last 5 years).

C. Irrigation and drainage facilities :

(i) (a) and (b) 3 electric motors, one oil engine, and one *rahat* fitted to well. (ii) One *nallah* in the middle of the farm works as a drainage in the rainy season.

D. Soil type and soil analysis .

(i) *Sehra* morand and *kali* of black colour and sandy and granular in structure. (ii) Chemical analysis :

	<i>Sehra</i>	Morand	<i>Kali</i>
N %	0.056	0.0399	0.0735
Available P ₂ O ₅ %	Nil	0.0026	0.0256
Available Potash %	0.024	0.041	0.028

(iii) Mechanical analysis :

Clay %	9.08	39.32	34.80
Fine silt %	6.40	13.31	15.40
Silt %	11.26	16.74	14.99
Fine sand %	24.30	11.00	11.38

Coarse sand %	46.18	9.01	12.35
Moisture %	0.74	6.12	5.07
Loss on ignition %	21.4	4.25	4.96
Calcium carbonate %	0.03	0.11	0.35

E. No. of experiments :

Wheat—16, *Jowar*—1, Kodo—1, Potato—8, Cabbage—1, Gram—2, Mixed pulse—1, Ginger—9, Total—39.

9. Government Seed and Demonstration Farm, Damoh.

A. General information :

(i) In the district of Damoh, $3\frac{1}{2}$ km. from Damoh Railway Station. Slightly slopy.
(ii) It represents wheat tract. (iii) Established in the year 1918. (iv) Cropping pattern Wheat—fallow—wheat. (v) Varietal trials on wheat.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
26	167	120	114	—	13	13	2	5	21	—	1	482

(Period on which av. rainfall is based is not available).

C. Irrigation and drainage facilities :

(i) (a) and (b) Nil. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) Black clay structure to a depth of 5'. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Mixed pulse—3. Total=3.

10. Government Seed and Demonstration Farm, Durg.

A. General information :

(i) District Durg, the farm is at a distance of 3 miles from Durg Railway Station. Paddy block area comprises of 55 ac. is four furlongs away from the farm building. (ii) Rice tract. (iii) The farm established in 1917. (iv) (1) Paddy after paddy. (2) Paddy followed by wheat and gram. (v) (1) To produce foundation seed for multiplication in development blocks. (2) To demonstrate improved method of cultivation.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
140	354	300	258	92	21	1	5	15	18	13	—	1217

[The period on which av. rainfall is based is from 1949 to 1963 (both inclusive).]

C. Irrigation and drainage facilities :

(i) (a) and (b) Canal irrigation facilities exist. (ii) There are open drainage channels in paddy area.

D. Soil type and soil analysis :

(i) Marshy soil with sandy loam structure and yellowish in colour, *kankar* soil with sticky structure and black colour and *dorsa* soil with black colour and slightly sticky structure. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—26, Gram—1, Linseed—1. Total=28.

11. Central Research Farm, Gwalior.

A. General information :

(i) District Gwalior, the farm is at a distance of one mile from Central Railway Station, Gwalior. More or less levelled and laid out plots of one acre and two acres in size. (ii) *Jowar*—wheat tract. (iii) The farm was established in 1916. (iv) *Jowar*—fallow—wheat, moong—wheat, G.M.-potato, fallow—gram—*berseem* are the crop rotations followed on the farm. (v) Agronomical, entomological and other types of experiments on different crops.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
82	253	252	163	30	4	8	17	7	9	3	7	835

Av. rainfall is based on 40 years rainfall from 1921 to 1960.

C. Irrigation and drainage facilities :

(i) (a) and (b) Two wells (deep bored) fitted with electric motor pumps. The facilities are available from 1956. (ii) Fields are well levelled. There is no need of any special drainage system. In some fields a side drainage channel is laid down.

D. Soil type and soil analysis :

(i) Loam at the depth of 3' with yellowish brown colour. (ii) Chemical analysis : The soil needs the application of 20 lb./ac. of N and 20 lb./ac. of P_2O_5 every year. Details are not available. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Jowar—1. Total=1.

12. Agriculture College Farm, Gwalior.

A. General information :

(i) District Gwalior, the farm is situated at a distance of one mile from Gwalior Railway Station. Land located near the college is levelled. The new farm has got undulating land. (ii) It represents *jowar*—wheat tract. (iii) Established in the year 1918. (iv) Cropping pattern : N.A. (v) Research work is carried out by postgraduate students.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
445	2200	860	1983	Nil	Nil	20	81	15	31	58	18	5711

(The av. rainfall is based on the rainfall for the year 1962-63.)

C. Irrigation and drainage facilities :

(i) (a) and (b) About 10 acres are irrigated from two wells since 1918. (ii) Proper drainage exists in college farm, while no drainage system in the new farm.

D. Soil type and soil analysis :

(i) Loamy and yellowish brown in colour. (ii) Chemical analysis and (iii) Mechanical analysis —N.A.

E. No. of experiments :

Wheat—6, *Jowar*—2, Gram—2, Tur—1, *Moong*—1, Linseed—2, *Berseem*—9, Mixed cropping—2. Total=25.

13. Regional Agricultural Research Institute, Institute of Plant Industry, Indore.

A. General information :

(i) District Indore, the farm is situated at a distance of $2\frac{1}{2}$ miles from Indore Railway Station. It is situated on the Malwa plateau about 1800 feet high above sea level. (ii) It

represents black cotton soil tract. (iii) The farm was established in 1924. (iv) (1) *Jowar*, cotton and wheat and (2) *Jowar*, groundnut, cotton and wheat is the cropping pattern. (v) Different types of studies on cotton, *jowar*, groundnut, gram and linseed.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
92	281	281	321	59	10	4	15	—	2	1	12	1079

(The av. rainfall is based on the rainfall of 10 years from 1953 to 1962).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation facility through wells is available. (ii) There is no proper drainage system.

D. Soil type and soil analysis :

(i) Clayey soil, black in colour. (ii) Chemical analysis : Total N % 0.073, total K_2O % 0.82, total CaO % 3.63 and total P_2O_5 % 0.07. Available P_2O_5 0.013 and available K_2O 0.005 per 100 gms. of soil. Cat-ion exchange capacity 64 ml./100 gms. of soil. pH 8 to 8.5. (iii) Mechanical analysis : Sand 25.5 %, silt 20.0 % and clay 53.8 %.

E. No. of experiments :

Paddy—1, Wheat—11, *Jowar*—12, Sugarcane—2, Cotton—16, Groundnut—2, Mixed cropping—4, Rotational—8. Total=56.

14. Government Seed and Demonstration Farm, Jagdalpur.

A. General information to D. Soil type and soil analysis :

Details—N.A.

E. No. of experiments :

Paddy—5. Total=5.

15. Government Agricultural Research Station, Jhabua.

A. General information :

(i) In the district of Jhabua, 11 miles from Meghnagar Railway Station. Undulating sandy land. (ii) It represents cotton—*jowar* tract. (iii) Established in the year 1956. (iv) Cropping pattern is maize—gram and maize—castor. (v) To conduct varietal and cultural trials on different crops sown in the area.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov. to May	Total
62	219	254	110	52	—	696

(The av. rainfall is based on rainfall of 1963—64.)

C. Irrigation and drainage facilities :

(i) (a) and (b) No irrigation facilities. (ii) No drainage system exists.

D. Soil type and soil analysis :

(i) Sandy and undulating to a depth of 0 to 9" and of grey and slight red colour. (ii) Chemical analysis : % of total P_2O_5 0.65, % of total N 0.08, % of available N 0.017, pH value 7.5. (iii) Mechanical analysis : Sand 65 to 70 %, silt 13 to 45 % and clay 15 to 20 %.

E. No. of experiments :

Paddy—1, Maize—2, Gram—5, *Lobia*—1, *Moong*—1, Groundnut—3, Castor—1 and Mixed cropping—4. Total=19.

16. Government Research Farm, Khandwa.

A. General information :

(i) In the district of Khandwa, the farm is situated at a distance of 3 miles from Khandwa Railway Station. Land is uniform. (ii) *Kharif* tract. (iii) The farm was established in 1925. (iv) Cropping pattern is cotton—*jowar* and groundnut. It was a multiplication farm prior to 1962. After that research on cotton and groundnut crops has been started.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
47	110	82	73	14	12	3	3	1	1	1	4	353

(Av. rainfall is based on the period 1935 to 1962.)

C. Irrigation and drainage facilities :

(i) (a) and (b) There is one *nala* and two wells for irrigation from 1953. (ii) There does not exist any proper drainage system.

D. Soil type and soil analysis :

(i) Sandy loam to clay with *kankar* layer and free calcium upto a depth of 6' and of light black colour. (ii) Chemical analysis : pH value 7.78, Carbon % 0.31, N 141 lb./ac., P_2O_5 62.12 lb./ac. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Jowar—1, Cotton—15. Total=16.

17. Regional Research Station, Khargone.

A. General information :

(i) In the district of Khargone (West Nimar), the farm is situated at a distance of 44 miles from Sanawad Railway Station. (ii) Type of tract is black cotton soil. (iii) Year of establishment is N.A. (iv) Important crops grown are groundnut, cotton and *jowar*. (v) Breeding trials on different crops.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
147	149	201	153	46	7	—	13	—	3	3	21	743

(Period on which the av. rainfall is based is not available.)

C. Irrigation and drainage facilities :

(i) (a) and (b) There does not exist any irrigation facility. (ii) There is no proper drainage system.

D. Soil type and soil analysis :

(i) Black cotton soil. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Jowar—5, Gram—5, Cotton—6, Groundnut—6, Linseed—4. Total=26.

18. Agricultural Research Farm, Kuthulia.

A. General information :

(i) In Rewa district, 35 miles from Satna Railway Station. Mostly uniform and levelled. (ii) It represents wheat and paddy tract. (iii) Established in the year 1952. (iv) Double cropping, mostly wheat and paddy. (v) Manurial, varietal and cultural trials on wheat and paddy.

B. Normal rainfall in mm :

N.A.

C. Irrigation and drainage facilities :

(i) Irrigation is available through river since 1955. (ii) In the north side of the farm, there exists proper drainage system, but not in the south side where it needs improvement.

D. Soil type and soil analysis :

(i) Clay and clay loam to a depth of 6" to 9" and of light black to brown colour and granular structure. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—4, Wheat—6, Gram—1, Tur—2, Linseed—1. Total=14.

19. Government Research Farm, Labhandi.

A. General information :

(i) In the district of Raipur, 5½ miles from Raipur Railway Station. The slope of the land is from east to west and from south to north. (ii) It represents rice tract. (iii) Established in the year 1903. (iv) Cropping pattern : Paddy after paddy ; paddy—wheat and pulses. (v) To conduct cultural and varietal trials on paddy in particular and other crops in general and multiplication of seeds.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
139	374	315	233	67	2	3	4	15	19	19	24	1214

(Av. rainfall is based on the period 1951 to 63).

C. Irrigation and drainage facilities :

(i) (a) and (b) Tank is the source of irrigation, which is fed by *chheri khedi* tank under Public Works Department. (ii) There are open drainage channels specially for the paddy field.

D. Soil type and soil analysis :

(i) *Matasi*, *karhar* and *dorsa* with sandy loam, clayey loam and loam structure and yellowish, blackish and grey colour. (ii) Chemical analysis :

	<i>Matasi</i>	<i>Karhar</i>	<i>Dorsa</i>
pH	7.3	6.6	7.4
Soluble salts	0.1	0.25	0.10
Organic carbon	0.6	0.50	0.40
Available P ₂ O ₅ in lb./ac.	12.0	21.60	28.00
Available K ₂ O in lb./ac.	160.0	200.00	176.00

(iii) Mechanical analysis—N.A.

E. No. of experiments :

Paddy—37, Wheat—2. Total=39.

20. Government Seed and Demonstration Farm, Mahagarh.

A. General information :

(i) In the district of Mansawe, 19 miles from Pipliya Railway Station. (ii) It represents cotton—*jowar* tract. (iii) Established in the year 1954. (iv) Cropping pattern 60 acres under *rabi* crops—wheat, gram and linseed and 40 acres under *kharif* crops—*jowar*, cotton, *tur*, *moong*, *urad*, maize and sugarcane. (v) It is a seed multiplication farm.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
10	326	242	133	48	2	Nil	4	—	4	—	2	773

(The av. rainfall is based on the period 1952 to 61).

C. Irrigation and drainage facilities :

(i) (a) and (b) There are two wells and two pump sets. The wells are available since the inception of the farm. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) Black cotton soil and light soil to a depth of 10'' to 2' and of clay structure.

(ii) Chemical analysis : pH value 7.4 to 8.1, Conductivity 0.02 to 0.31, Organic Carbon % 0.18 to 0.42, available N 81 to 189 lb./ac. and available P_2O_5 2.28 to 30.78 lb./ac.

(iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—4, Jowar—3, Cotton—2, Groundnut—5, Linseed—1, Mixed cropping—3.
Total=18.

21. Government Seed and Demonstration Farm, Nabibagh.**A. General information :**

(i) In Sehore district, 7 km. from Bhopal Railway Station. Fields are plain. (ii) It represents wheat tract. (iii) Established in the year 1920. (iv) Cropping pattern : Green manuring—wheat, gram—wheat. (v) Programme of research : Wheat varietal trials, fodder research and weed control research.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
54.2	373.4	361.7	337.2	77.4	11.1	2.5	29.0	11.2	8.4	4.2	9.7	1280.0

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation through wells for the last 20 years in an area of 30 acres. (ii) There exists a proper drainage system.

D. Soil type and soil analysis :

(i) Black soil to a depth of 6'. (ii) Chemical analysis and (ii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—23, Jowar—1, Gram—5, Linseed—2. Total=31.

22. Government Seed and Demonstration Farm, Nowgong.**A. General information :**

(i) In the district of Chhatanpur, 19 miles from Herpalpur Railway Station. The land is plain. (ii) It represents millet tract. (iii) Established in the year 1948. (iv) Cropping pattern is double cropping. (v) Varietal trials on different crops.

B. Normal rainfall in mm. :

N.A.

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation is available through wells. Since beginning, lift irrigation is available. (ii) Proper drainage system exists.

D. Soil type and soil analysis :

(i) Sandy soil to a depth of 4' and of granular structure and blackish brown colour. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

*F. No. of experiments :*Wheat—2, *Jowar*—3, Total=5.**23. Government Seed and Demonstration Farm, Obedullaganj.***A. General information :*

(i) In the district of Raissen, 2 furlongs from Obedullaganj Railway Station. In general, the fields are levelled with slight slope from east to south. (ii) It represents wheat tract. (iii) Established in the year 1952. (iv) Cropping pattern : Fallow—wheat and G.M.—wheat. (v) Varietal, manurial and cultural trials on wheat.

B. Normal rainfall in mm. :

N.A.

C. Irrigation and drainage facilities :

(i) and (ii) N.A.

D. Soil type and soil analysis :

(i) Deep black to a depth of 5'. (ii) Chemical analysis : pH 7.4 to 8.3, Conductivity 0.05 to 0.2, Organic carbon % 0.12 to 0.38, available N 45 to 171 lb./ac. and available P_2O_5 2.28 to 36.94 lb./ac. (iii) Mechanical analysis —N.A.

E. No. of experiments :

Wheat—1. Total=1.

24. Government Soil Conservation Research Farm, Phanda.*A. General information :*

(i) District Sehore, the farm is at a distance of one furlong from Railway Station, Phanda. The land is slopy. (ii) Type of tract is black cotton soil. (iii) The farm was established in 1953. (iv) Cropping pattern is wheat—gram, *jowar*—gram. (v) Research on soil conservation.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
63	343	417	356	69	6	3	10	10	—	1	2	1281

(The period on which av. rainfall is based is from 1959 to 64).

C. Irrigation and drainage facilities :

(i) (a) and (b) There is one well for irrigation. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) Very deep black in colour and granular in structure. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—12, *Jowar*—4, Gram—4, *Urid*—1, *T'eora*—4, *Masur*—4, Groundnut—3, *Sannhemp*—1, Mixed cropping—1. Total=34.

25. Government Wheat Research Farm, Powarkheda.*A. General information :*

(i) In the district of Hoshangabad, 2 miles from Powarkheda Railway Station. The

30. Government Research Farm, Seoni.*A. General information :*

(i) In the District of Seoni, one furlong from Seoni Railway Station. The land is gradually sloping towards south and east. (ii) It represents Satpura plateau (non—Haveli) tract. (iii) Established in the year 1918. (iv) Cropping pattern : Wheat, gram, sugarcane ; paddy—wheat or *berseem* and G.M.—wheat. (v) Research on fodder and fibre and multiplication and distribution of improved seeds.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
74	132	108	82	15	19	82	19	3	6	5	7	.552

(The av. rainfall is based on the period 1953 to 1963).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation is done by wells being fitted with 3 electric motors and one oil engine. (ii) Partial drainage system exists.

D. Soil type and soil analysis :

(i) Morand I and morand II of black colour and sticky structure. (ii) Chemical analysis : pH 5.8 to 7.2, Organic Carbon 0.21 to 0.40%, N 67 to 109 lb./ac. and P_2O_5 6 to 88 lb./ac. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—2. Total=2.

31. Government Vegetable Research Station, Silary.*A. General information :*

(i) In Hoshangabad district, one mile from Pipariya Railway Station. Level land with gradual slope. It represents Narmada tract. (iii) Established in 1950. (iv) Double cropping pattern followed. (v) Varietal and manural trials on different vegetable crops.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
91	264	346	289	1	5	18	1	8	2	1	—	1026

(Av. is based on 2 years rainfall).

C. Irrigation and drainage facilities :

(i) (a) and (b) Irrigation by oil engine fitted in the wells since 1957. (ii) Only ground level drainage exist.

D. Soil type and soil analysis :

(i) Sandy loam to a depth of 9", brownish in colour and granular in structure. (ii) Chemical analysis : pH 8.1 to 9.0, Conductivity 0.04 to 0.25, Organic Carbon 0.37 to 0.57 %, N 120 to 232 srs./ac. and P_2O_5 44 to 105 srs./ac. (iii) Mechanical analysis—N.A.

E. No. of experiments :

Tomato—6, Cluster beam—2, Chillies—4. Total=12.

32. Central Research Farm, Ujjain.*A. General information :*

(i) In the district of Ujjain, 3 miles from Ujjain Railway Station. The land is unlevelled. (ii) It represents Malwa tract. (iii) The farm was established in 1916. (iv) Crops in *rabi* and *kharif* both are grown. (v) Agronomic experiments on different crops.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
55	130	140	70	19	4	3	4	9	1	—	4	439

(The period on which the av. rainfall is based is from 1941 to 61).

C. Irrigation and drainage facilities :

(i) (a) and (b) Canal irrigation facilities are available. (ii) No proper drainage system exists.

D. Soil type and soil analysis :

(i) Heavy black cotton soil with 10 to 12 ft. depth in *rabi* fields and *murum* with 5 to 6 ft. depth in *kharif* fields. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No. of experiments :

Wheat—1, *Jowar*—1, Cotton—1, Linseed—1. Total=4.

33. Government Experimental Farm, Vidisha.**A. General information :**

(i) In the District of Vidisha, 3 km. from Vidisha Railway Station. Fields are bunded but are slopy. (ii) Type of tract is black heavy clay soil. (iii) The farm established in 1943. (iv) Normal cropping pattern is paddy, *jowar* in *kharif*, and gram and linseed in *rabi*. (v) To conduct agronomical trials on wheat.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
18	82	135	116	11	7	—	6	1	1	7	2	382

(The period on which av. rainfall is based is not available).

C. Irrigation and drainage facilities :

(a) There is one existing well since the inception of the farm. (b) There does not exist any proper drainage system.

D. Soil type and soil analysis :

(a) Black soil of 7 to 8 ft. depth and compact in structure. (ii) Chemical analysis and (iii) Mechanical analysis—N.A.

E. No of experiments :

Paddy—1, Wheat—11, *Jowar*—4, Gram—2, Groundnut—2, Linseed—2, Mixed cropping—3. Total=25.

34. Government Reserch Farm, Waraseoni.**A. General information :**

(i) In the district of Balaghat, 2 miles from Waraseoni Railway Station. Most of the cultivated land is well levelled with slightly slopy from west to east. (ii) Rice tract. (iii) The farm established in 1917. (iv) Paddy after paddy and paddy followed by wheat and linseed etc. (v) To conduct Agronomic and manurial experiments on paddy and to produce foundation seed of paddy.

B. Normal rainfall in mm. :

June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Jan.	Feb.	March	April	May	Total
157	446	422	237	72	3	28	15	11	21	8	5	1425

[The period on which av. rainfall is based is from 1949 to 1962].

C. Irrigation and drainage facilities :

(i) (a) and (b) Total cultivated area is under the command of government tank Pathari, 2 miles away from the farm. (ii) As this is paddy tract, field to field drainage is available by cutting open bunds when water is not required.

D. Soil type and soil analysis :

(i) Morand of grey colour and sandy loam structure and *sehara* of yellowish colour and clayey loam structure. (ii) Chemical analysis :

	Morand	Sehara
pH	6.9	7.3
Soluble salt	0.45	0.90
Organic matter	0.74	0.97
Available N in lb./ac.	148.0	194.0
Available P ₂ O ₅ in lb./ac.	80.0	20.00

(iii) Mechanical analysis —N.A.

E. No. of experiments :

Paddy—18 Total=18.

Crop :- Paddy.**Ref :- M.P. 54(55).****Site :- Govt. Agri. Res. Stn., Adhartal.****Type :- 'M'.**

Object :—To study the effect of different methods of application of N and P fertilizers on Paddy.

1. BASAL CONDITIONS:

(i) (a) Nil. (b) and (c) N.A. (ii) (a) *Sehra*. (b) N.A. (iii) N.A./3 and 4.8.1954. (iv) *Malwa* ploughing
 (b) Transplanting. (c) 40 lb./ac. (d) 4" between plants. (e) N.A. (v) 40 lb./ac. of N as F.Y.M. (vi) Paddy
 no. 17. (vii) Irrigated. (viii) 2 weedings. (ix) 57.67". (x) 9 to 11.11.1954.

2. TREATMENTS :

4 methods of application of manures : M_0 =Control, M_1 =N+ P_2O_5 at transplanting, M_2 =N+ P_2O_5 mixed
 with earth and applied as balls and M_3 =Roots dipped in N and
 P_2O_5 solution before transplanting.

N applied at 20 lb./ac. as A/S and P_2O_5 at 20 lb./ac. as Super.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 5. (iv) (a) and (b) $51' \times 23\frac{1}{2}'$. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) N.A. (iii) Yield of grain and straw. (iv) (a) 1954—contd. (b) and (c) N.A. (v) (a)
 Raipur and Waraseoni. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 1554 lb./ac. (ii) 246.5 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain
 in lb./ac.

Treatment	M_0	M_1	M_2	M_3
Av. yield	1669	1453	1522	1572

S.E./mean = 110.2 lb./ac.

Crop :- Paddy.**Ref :- M.P. 55(34).****Site :- Govt. Agri. Res. Stn., Adhartal.****Type :- 'M'.**

Object :—To study the effect of different methods of application of N and P fertilizers on Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) As per treatments. (ii) (a) *Sehra*. (b) N.A. (iii) N.A./13 and 16.8.1955.
 (iv) (a) to (e) N.A. (v) 40 lb./ac. of N as F.Y.M. before transplanting. (vi) Paddy no. 17. (vii) Irrigated.
 (viii) 2 weedings. (ix) 64.38". (x) 15.11.1955.

2. TREATMENTS :

Same as in expt. no. 54(55) above.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 5. (iv) and (v) N.A. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) Nil. (iii) Yield of grain and straw. (iv) (a) 1954—contd. (b) Yes. (c) Nil. (v) (a) and
 (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 16.06 lb./ac. (ii) 328.8 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain
 in lb./ac.

Treatment	M_0	M_1	M_2	M_3
Av. yield	1256	1795	1801	1570

S.E./mean = 147.0 lb./ac.

2. TREATMENTS :

4 G.M. treatments : M_0 = Control, M_1 = 2 tons/ac. of G.L. before sowing + N at *Biassi*, M_2 = 2 tons/ac. of G.L. + N at *Biassi* and M_3 = 2 tons/ac. of Sannhemp + N at *Biassi*.
N applied at 5 lb./ac. as A/S.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 4. (iv) (a) $26' \times 53\frac{1}{2}'$. (b) $22' \times 49\frac{1}{2}'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) Grain yield. (iv) (a) 1957—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 15555 lb./ac. (ii) 86.2 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	M_0	M_1	M_2	M_3
Av. yield	1490	1713	1580	1439

S.E./mean = 43.1 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 58(71).

Site :- Govt. Seed and Demons. Farm, Durg.

Type :- 'M'.

Object :—To study the effect of G.L. and A/S as manures on Paddy.

1. BASAL CONDITIONS :

(i) Nil. (b) Paddy. (c) As per treatments. (ii) (a) *Matasi*. (b) N.A. (iii) 10.7.1958./N.A. (iv) (a) Two ploughings by *desi* plough. (b) Transplanting (c) 80 lb./ac. (d) and (e) N.A. (v) Nil. (vi) *Luchai* × *Gurmatia* × *Burma*. (vii) Irrigated. (viii) 2 weedings and *Biassi*. (ix) 43.79°. (x) 18.12.1958.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 57(65) on page 19.

4. GENERAL :

(i) Not satisfactory. (b) N.A. (iii) Grain yield. (iv) (a) 1957—1958. (b) Yes. (c) Nil. (v) N.A. (vi) Heavy rains in the 2nd week of July. (vii) Nil.

5. RESULTS :

(i) 1891 lb./ac. (ii) 3 0.5 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	M_0	M_1	M_2	M_3
Av. yield	1650	2095	1840	1980

S.E./mean = 155.2 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 54(122).

Site :- Instt. of Plant Industry, Indore.

Type :- 'M'.

Object :—To study the effect of sources and levels of N in combination with P_2O_5 on Paddy.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Cotton. (c) Nil. (ii) (a) Black cotton soil. (b) Refer soil analysis, Indore. (iii) 6.7.1954.
 (iv) (a) One bakharing. (b) Transplanting. (c) to (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated.
 (viii) 1 weeding and one 1 interculture. (ix) 52.23". (x) 11 and 15.10.1954.

2. TREATMENT :

All combination of (1), (2) and (3) :

- (1) 2 sources of N : $S_1 = A/S$ and $S_2 = G.N.C.$
 (2) 4 levels of N : $N_0 = 0$, $N_1 = 20$, $N_2 = 40$ and $N_3 = 60$ lb./ac.
 (3) 3 levels of P_2O_5 : $P_0 = 0$, $P_1 = 15$ and $P_2 = 30$ lb./ac. of P_2O_5 .

3. DESIGN :

- (i) Fact. in R.B.D. (ii) (a) 24. (b) N.A. (iii) 3. (iv) (a) $45' \times 9.33'$. (b) $40' \times 4.66'$ (v) $2.5' \times 2.33'$.
 (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) 1952—1954. (b) No. (c) Nil. (v) N.A. (vi)
 Heavy rains in September. (vii) N.A.

5. RESULTS :

- (i) 861 lb./ac. (ii) 183.8 lb./ac. (iii) Main effects of N and S and the interaction $N \times S$ are significant.
 Others are not significant. (iv) Av. yield of grain in lb./ac.

$$N_0P_0 = 615, N_0P_1 = 632, N_0P_2 = 656 \text{ lb./ac.}$$

	N_1	N_2	N_3	P_0	P_1	P_2	Mean

2. TREATMENTS :

Main-plot treatments :

4 G.M. treatments : T₀=Control T₁=G.L. at 2 tons/ac. before sowing, T₂=Sann hemp seed at 20 lb./ac. sown mixed with Paddy and T₃=*Dhaincha* seed at 10 lb./ac. sown mixed with Paddy.

Sub-plot treatments

2 levels of N as A/S : $N_0=0$ and $N_1=5$ lb./ac.

3. DESIGN :

(i) Split-plot. (ii) (a) 4 main-plots/block, 2 sub-plots/main-plot. (b) N.A. (iii) 8. (iv) (a) $14' \times 28'$, (b) $12' \times 27'$ (v) $1' \times \frac{1}{2}'$. (vi) Yes.

4. GENERAL :

(i) Good. (ii) N.A. (iii) Grain and straw yield. (iv) (a) 1959—1962. (b) No. (c) Nil. (v) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 2067 lb./ac. (ii) (a) 372.0 lb./ac. (b) 63.5 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb ac.

	T_0	T_1	T_2	T_3	Mean
N_0	2239	2054	1976	1943	2053
N_1	2264	2063	2016	1981	2081
Mean	2252	2058	1996	1962	2067

S.E. of difference of two

1. T marginal means = 131.5 lb./ac.
2. N marginal means = 15.9 lb./ac.
3. N means at the same level of T = 31.7 lb./ac.
4. T means at the same level of N = 133.4 lb./ac.

Crop :- Paddy.

Ref :- M.P. 55(7).

Site :- State Mechanised Farm, Reora.

Type :- 'M'.

Object :- To study the effect of the application of different levels and sources of N on Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Gram. (b) Gram. (c) Nil. (ii) (a) Mixed red and black soil. (b) N.A. (iii) N.A./15.8.1955. (iv) (a) 2 ploughings. (b) Transplanting. (c) N.A. (d) $10''$ between rows. (e) N.A. (v) 20 lb./ac. of P_2O_5 as Triple Super broadcasted. (vi) T—136 (early). (vii) Unirrigated. (viii) 1 weeding. (ix) $20.50''$. (x) 29 and 30.10.1955.

2. TREATMENTS :

All combinations of (1) and (2) + a control.

- (1) 3 sources of N : $S_1=A/S$, $S_2=A/N$ and S_3 =Nitro chalk.
- (2) 3 levels of N : $N_1=20$, $N_2=40$ and $N_3=60$ lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 10. (b) N.A. (iii) 3. (iv) (a) $40' \times 24'$. (b) $36' \times 20'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Mild attack of bug. (iii) Biometric observations and yield of grain. (iv) (a) and (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 1065 lb./ac. (ii) 337.0 lb./ac. (iii) No effect is significant. (iv) Av. yield of grain in lb./ac.

Control = 751 lb./ac.

	N ₁	N ₂	N ₃	Mean
S ₁	1019	1141	1387	1182
S ₂	852	1100	1137	1030
S ₃	1016	1115	1129	1087
Mean	962	1119	1218	1100

S.E. of any marginal mean = 112.3 lb./ac.

S.E. of body of table or control mean = 194.6 lb./ac.

Crop :- Paddy.**Ref :- M.P. 54(5)****Site :- State Mechanised Farm, Reora,****Type :- 'M'.**

Object :—To study the effect of N obtained from two sources applied at different times on Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Gram. (b) Gram. (c) Nil. (ii) (a) Mixed red and black soil. (b) N.A. (iii) 16.8.1954. (iv) (a) N.A. (b) Transplanting. (c)—. (d) 10"×10". (e) N.A. (v) Triple Super at 20 lb./ac. of P₂O₅ applied before transplanting. (vi) T—43 (medium-late). (vii) Unirrigated. (viii) 2 weedings. (ix) 23.20". (x) 10.10.1954.

2. TREATMENTS :

All combinations of (1) and (2)+a control.

(1) 2 sources of N : S₁=A/S and S₂=Urea.

(2) 7 times of application of N : T₁=30 lb./ac. of N before planting, T₂=30 lb./ac. of N at planting, T₃=30 lb./ac. of N at tillering, T₄=15 lb./ac. of N before planting+15 lb./ac. of N at tillering, T₅=15 lb./ac. of N at planting+15 lb./ac. of N at tillering, T₆=10 lb./ac. of N before planting+10 lb./ac. of N at tillering+10 lb./ac. of N a week before flowering and T₇=10 lb./ac. of N at planting+10 lb./ac. of N at tillering+10 lb./ac. of N a week before flowering.

3. DESIGN :

(i) R.B.D. (ii) (a) 15. (b) N.A. (iii) 3. (iv) (a) 40'×24'. (b) 36'×20'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) Good. No lodging. (ii) Slight attack of gundhi bug. Hexidol 5% used at 8 lb./ac. to check the pest. (iii) Biometric observations and yield of grain. (iv) (a) 1954—contd. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) Yield for treatment S₂ T₆ in one replication was missing. Data analysed by missing-plot technique.

5. RESULTS :

(i) 986 lb./ac. (ii) 284.9 lb./ac. (iii) Main effect of S and 'control vs. others' are significant. (iv) Av. yield of grain in lb./ac.

Control = 592.0 lb./ac.

	T ₁	T ₂	T ₃	T ₄	T ₅	T ₆	T ₇	Mean

= 140.7 lb./ac.

Crop :- Paddy.

Ref :- M.P. 54(41).

Site :- Govt. Agri. Res. Farm, Sarkhanda.

Type :- 'M'.

Object :—To study the comparative effects of C/N and A/S with and without lime on Paddy.

1. BASAL CONDITIONS :

- (i) (a) Nil. (b) Sugarcane ratoon. (c) Nil. (ii) (a) Sandy loam. (b) N.A. (iii) 23.6.1954./24.9.1954. (iv) (a) 2 ploughings 2 *clatari* and one *koper*. (b) Transplanting. (c) 30 lb./ac. (d) 3" to 5" between rows. (e) 1. (a) Nil. (vi) *Gurmatia* (medium) (vii) Irrigated. (viii) 2 hand weedings. (ix) 45.18". (x) 10.11.1954.

2. TREATMENTS :

All combinations of (1), (2) and (3)+2 extra treatments :

(1) 2 sources of N : S₁=A/S and S₂= Sodium Nitrate :

(2) 2 levels of N : N₁=20 and N₂=40 lb./ac.

(3) 2 levels of lime : L₀=0 and L₁=200 lb./ac.

Extra treatments : T₀=Control and T₁=200 lb./ac. of lime.

3. DESIGN :

- (i) R.B.D. (ii) (a) 10. (b) N.A. (iii) 6. (iv) (a) 72'×22½'. (b) 66'×16½'. (v) 3'×3'. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Nil. (iii) Height, yield of grain and straw. (iv) (a) and (b) No. (c) Nil. (v) (a) N.A. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

- (i) 2919 lb./ac. (ii) 758.8 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

$$T_0 = 3415 \text{ lb./ac., } T_1 = 3408 \text{ lb./ac.}$$

S.E. of any marginal mean = 154.9 lb./ac.
S.E. of body of any table = 219.0 lb./ac.

Crop :- Paddy.

Ref :- M.P. 54(18).

Site :- Govt. Agri. Res. Farm, Sarkhanda.

Type :- 'M'.

Object :—To study the effect of different methods of application of N and P fertilizers on Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) Nil. (ii) (a) Sandy loam. (b) N.A. (iii) 24.6.1954./26.7.1954. (iv) (a) 3 ploughings, 2 *clatari* and 1 *koper*. (b) Transplanting. (c) 30 lb./ac. (d) 4" to 5" between plants. (e) 2. (v) Nil. (vi) *Luchai* × *Gurmatia*. (late). (vii) Irrigated. (viii) 2 hand weedings. (ix) 45.18". (x) 9.12.1954.

2. TREATMENTS :

4 methods of application of manures : B_0 =Control, B_1 =M applied at transplanting, B_2 =M mixed with earth and applied as balls and B_3 =Roots dipped in solution of M before transplanting.

M=20 lb./ac. of N as A/S+20 lb./ac. of P_2O_5 as Super.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 5. (iv) (a) $66' \times 16\frac{1}{2}'$. (b) $60' \times 10\frac{1}{2}'$. (v) $3' \times 3'$. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Yield of grain and straw. (iv) (a) 1954—contd. (b) No. (c) Nil. (v) (a) and (b) Nil. (vi) Nil. (vii) Expt. failed in 1957.

5. RESULTS :

(i) 5999 lb./ac. (ii) 699.0 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	B_0	B_1	B_2	B_3
Av. yield	5822	6306	6002	5864

S.E./mean = 312.6 lb./ac.

Crop :- Paddy.**Ref :- M.P. 54(14).****Site :- Govt. Expt. Farm, Vidisha.****Type :- 'M'.**

Object :- To study the effect of micro-nutrients on Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Heavy clay. (b) N.A. (iii) 12.7.1954/N.A. (iv) (a) N.A. (b) Seeds drilled. (c) 20 lb./ac. (d) 12" between rows. (e) N.A. (v) 10 C.L./ac. of T.C. (vi) *Bhilsa of Ujjain Desi*. (vii) Unirrigated. (viii) Hand weeding and interculturing with hoe. (ix) and (x) N.A.

2. TREATMENTS :

3 levels each of Borax and CuSO₄ + a control : T₀=Control, T₁=8, T₂=16 and T₃=32 ozs./ac. of Borax, T₄=4, T₅=8 and T₆=16 ozs./ac. of CuSO₄.

Treatments applied on 6.7.1954.

3. DESIGN :

(i) R.B.D. (ii) (a) 7. (b) N.A. (iii) 4. (iv) (a) and (b) 20'×6'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Yield of grain and straw. (iv) (a) No. (b) and (c) —. (v) to (vii) Nil.

5. RESULTS:

(i) 1967 lb./ac. (ii) 315.0 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb /ac.

Treatment	T ₀	T ₁	T ₂	T ₃	T ₄	T ₅	T ₆
Av. yield	2036	1912	1958	1991	1845	2076	1952

S.E/mean = 157.5 lb./ac.

Crop :- Paddy (Kharif).**Ref :- M.P. 54(90).****Site :- Govt. Res. Farm, Waraseoni.****Type :- 'M'.**

Object :- To study the effect of different methods of applying N and P fertilisers on Paddy,

1. BASAL CONDITIONS :

(i) (a) N.A. (b) Paddy. (c) N.A. (ii) (a) Sandy loam. (b) Refer soil analysis, Waraseoni. (iii) N.A./15.7.1954. (iv) 2 ploughings. (b) Transplanting. (c) to (e) N.A. (v) 40 lb./ac. of N as F.Y.M. (vi) *Luchai*×*Badhia Baku* (late). (vii) Irrigated. (viii) N.A. (ix) 34.42" (x) N.A.

2. TREATMENTS :

Same as in expt. no. 54(18) on page 50.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 5. (iv) (a) and (b) 1/40 ac. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Satisfactory. Patchy growth in treatments B₃. (ii) N.A. (iii) Av. height, no of tillers and yield of grain and straw. (iv) (a) 1954. (b) N.A. (c) Nil. (v) (a) Labhandi and Durg. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 2612 lb./ac. (ii) 223.7 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	B ₀	B ₁	B ₂	B ₃
Av. yield	2770	2827	2408	2442

S.E./mean = 100.0 lb./ac.

Crop :- Paddy (Kharif).

Ref :- M.P. 55(64).

Crop :- Paddy (Kharif).

Ref :- 57(MAE).

Site :- M.A.E. Farm, Bagwai.

Type :- 'M'.

Object :—Type IV—To study the effect of application of P to legumes on the succeeding Paddy Crop.

1. BASAL CONDITIONS :

(i) (a) Legumes—Paddy. (b) Legumes. (c) As per treatments. (ii) (a) Medium black soil. (b) N.A. (iii) 4th. week of June 1957/end of July 1957. (iv) (a) 1 *bakhering*, 2 ploughings, interculture by Japanese hoe and 3–4 spadings. (b) and (c) N.A. (d) 9°×9°. (e) 3. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) Weeding. (ix) 34°. (x) 3rd week of Nov. 1957.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1) and (2) + a control (no G.M.)

(1) 2 legumes preceding paddy : L₁=Gram and L₂=Peas.

(2) 3 levels of P₂O₅ applied to legumes : P₀=0, P₁=40 and P₂=80 lb./ac.

Sub-plot treatments :

3 levels of N as A/S : N₀=0, N₁=15 and N₂=30 lb./ac.

N applied to paddy at puddling. Legumes ploughed in *situ*.

3. DESIGN :

(i) Split-plot. (ii) (a) 7 main-plots/block ; 3 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) N.A. (b) (b) 33'×13'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Grain yield. (iv) (a) 1957—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 789 lb./ac. (ii) (a) 286.3 lb./ac. (b) 147.0 lb./ac. (iii) Main effect of N alone is highly significant. (iv) Av. yield of grain in lb./ac.

	L ₀ P ₀	L ₁ P ₀	L ₁ P ₁	L ₁ P ₂	L ₂ P ₀	L ₂ P ₁	L ₂ P ₂	Mean
N ₀	683	716	420	601	395	716	543	582
N ₁	765	872	848	897	658	979	773	827
N ₂	930	856	1061	889	749	1143	1069	957
Mean	793	815	776	796	601	946	795	789

S.E. of difference of two

1. LP marginal means = 134.9 lb./ac.
2. N marginal means = 45.4 lb./ac.
3. N means at the same level of LP = 120.0 lb./ac.
4. LP means at the same level of N = 166.8 lb./ac.

Crop :- Paddy (Kharif).

Ref :- 56(MAE).

Site :- M.A.E. Farm, Bagwai.

Type :- 'M'.

Object :-Type VI—To study the effect of different types and levels of phosphate along with different methods of placement.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Medium black soil. (b) N.A. (iii) Last week of July, 1956. (iv) (a) to (c) N.A. (d) 9'×9'. (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) and (ix) N.A. (x) Middle of Dec. 1956.

2. TREATMENTS :

All combinations of (1), (2) and (3)+1 control in each block.

(1) 3 sources of P₂O₅ : S₁=Ammono. Phos., S₂=Super and S₃=Dicalcium phosphate.

(2) 2 levels of P₂O₅ : P₁=20 and P₂=40 lb./ac.

(3) 3 methods of applications of P₂O₅ : M₁=Broadcast at puddling, M₂=Dipping the seedling in mud-slush mixed with fertilizer before transplanting and M₃=Placement in pellet form near the roots at planting:

N equalised to 30 lb./ac. by applying A/S.

3. DESIGN :

(i) 2×3² fact. confd. +1 control in each block. (ii) (a) 7 plots/block ; 3 blocks/replication. (b) N.A. (iii) 4. (iv) (a) 34'×16'. (b) 32'×14'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Grain yield. (iv) (a) 1956—contd. (b) N.A. (c) Nil. (v) Labhandi. (vi) Nil. (vii) Mean and standard errors for M×S table have been adjusted for block effects.

5. RESULTS :

(i) 2455 lb./ac. (ii) 430.6 lb./ac. (iii) Main effect of P is significant. (iv) Av. yield of grain in lb./ac.

Control = 1690 lb./ac.

	M ₁	M ₂	M ₃	Mean	S ₁	S ₂	S ₃

S.E. of marginal mean of S or P	= 17.7 lb./ac.
S.E. of marginal mean of M	= 21.6 lb./ac.
S.E. of body of S×M or P×M table	= 30.6 lb./ac.
S.E. of body of S×P table	= 25.0 lb./ac.

Crop :- Paddy (Kharif).

Ref :- M.P. 56(MAE).

Site :- M.A.E. Farm, Bagwai.

Type :- 'M'.

Object :—Type VI (TCM)—To find out the residual effect of P on the yield of Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Paddy. (b) Paddy. (c) As per treatments. (ii) (a) Medium black soil. (b) N.A. (iii) Last week of July, 1956. (iv) (a) to (c) N.A. (d) $9'' \times 9''$. (e) 3. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) and (ix) N.A. (x) Middle of December, 1956.

2. TREATMENTS :

Treatment	1	2	3	4	5	6	7	8	9	10	11	12
First year	0	C	C	p ₁	p ₂	0	0	0	0	p _{1/2}	p ₁	p ₂
Second year	0	C	C	0	0	p ₁	p ₂	0	0	p _{1/2}	p ₁	p ₂
Third year	0	C	C	0	0	0	0	p ₁	p ₂	p _{1/2}	p ₁	p ₂

Treatments are three-course rotation with 11 distinct treatments. Plots under treatment 1 do not receive any fertilizer. Plots under other ten treatments receive a basal application of N as 5000 lb./ac. of F.Y.M. One of the ten treatments consists of the application of basal dose of N only. This treatment which serves as control is applied in two plots in each block.

Various symbols denote : p_{1/2}=10, p₁=20 and p₂=40 lb./ac. of P₂O₅.

3. DESIGN :

(i) R.B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) (a) $45' \times 24'$. (b) $40' \times 18'$. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Grain yield. (iv) (a) 1954—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 1555 lb./ac. (ii) 312.8 lb./ac. (iii) 'Treated vs control' is highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	(2, 3)	4	5	6	7	8	9	10	11	12

Object :—Type II—To study the manurial requirements of Paddy.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Red loam. (b) N.A. (iii) N.A./4th week of July to 2nd week of August, 1958. (iv) (a) 1 ploughing. (b) N.A. (c) 40 lb./ac. (d) 4"×4". (e) 3. (v) Nil. (vi) *Luchai*×*Gurmatia* no. 18 (late). (vii) Irrigated. (viii) Weeding. (ix) 66". (x) 4th week of November, 1958.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 57(MAE) type II on page 64 (Direct, residual and cumulative effects studied).

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) 1956—contd. (b) N.A. (c) Nil. (v) Bagwai. (vi) and (vii) Nil.

5. RESULTS :

Cumulative Effect

(i) 2037 lb./ac. (ii) 341.2 lb./ac. (iii) Main effects of N and P alone are highly significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	K ₀	K ₁	K ₂	F ₀	F ₁	Mean
P ₀	1598	1795	2064	1755	1890	1812	1631	2007	1819
P ₁	1646	2457	2551	2272	2078	2304	2102	2334	2218

S.E. of body of N×F, P×F or K×F table	= 100.8 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 58(MAE).

Site :- M.A.E. Farm, Raipur.

Type :- 'M'.

Object :—Type IV—To study the effect of application of P to legumes on the succeeding Paddy crop.

1. BASAL CONDITIONS :

(i) (a) Legumes—Paddy. (b) Legumes. (c) As per treatments. (ii) (a) Red loam. (b) N.A. (iii) N.A./4th week of July to 2nd week of August, 1958. (iv) (a) 1 ploughing. (b) N.A. (c) 40 lb./ac. (d) 4"×4". (e) N.A. (v) 5000 lb./ac. of F.Y.M. (vi) *Luchai*×*Gurmatia* no. 18 (late). (vii) Irrigated. (viii) Weeding. (ix) 66". (x) 4th week of November, 1958.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1) and (2)+a control (no G.M.).

(1) 2 legumes preceding paddy : L₁=*Moong* and L₂=*Lakh*.

(2) 3 levels of P₂O₅ applied to legumes : P₀=0, P₁=40 and P₂=80 lb./ac.

Sub-plot treatments :

3 levels of N as A/S : N₀=0, N₁=15 and N₂=30 lb./ac.

N applied to paddy at puddling. Legumes ploughed *in situ*.

3. DESIGN :

(i) Split-plot. (ii) (a) 7 main-plots/block ; 3 sub-plots/main-plot. (b) N.A. (iii) 3. (iv) (a) 34'×16'. (b) 32'×14'. (v) 1'×1'. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Grain yield. (iv) (a) 1957—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 1521 lb./ac. (ii) (a) 353.4 lb./ac. (b) 236.8 lb./ac. (iii) Main effect of N is highly significant and control vs. others is significant. (iv) Av. yield of grain in lb./ac.

	L ₀ P ₀	L ₁ P ₀	L ₁ P ₁	L ₁ P ₂	L ₂ P ₀	L ₂ P ₁	L ₂ P ₂	Mean
N ₀	1056	1231	1218	1694	1642	1535	1325	1386
N ₁	1396	1442	1555	1646	1646	1649	1370	1529
N ₂	1331	1545	1457	1749	1817	2037	1604	1649
Mean	1261	1406	1410	1696	1702	1740	1433	1521

S.E. of difference of two

1. LP marginal means = 166.6 lb./ac.
2. N marginal means = 73.1 lb./ac.
3. N means at the same level of LP = 193.3 lb./ac.
4. LP means at the same level of N = 229.5 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 59(MAE).

Site :- M.A.E. Farm, Raipur.

Type :- 'M'.

Object : Type IV—To study the effect of application of P to legumes on the succeeding Paddy crop.

1. BASAL CONDITIONS :

(i) (a) Paddy—Legumes. (b) Legumes. (c) As per treatments. (ii) (a) Red loam soil. (b) N.A. (iii) N A./1st and 3rd week of August, 1959. (iv) (a) Ploughing. (b) N.A. (c) 40 lb./ac. (d) 4"×4". (e) 3. (v) Nil. (vi) *Luchai*×*Budiabalus* no. 4 (late); (vii) Irrigated. (viii) Weeding. (ix) 42". (x) 3rd week of November, 1959.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 58(MAE) type IV on page 74.

5. RESULTS :

(i) 1780 lb./ac. (ii) (a) 487.4 lb./ac. (b) 293.0 lb./ac. (iii) Main effect of N alone is highly significant. (iv) Av. yield of grain in lb./ac.

	L ₀ P ₀	L ₁ P ₀	L ₁ P ₁	L ₁ P ₂	L ₂ P ₀	L ₂ P ₁	L ₂ P ₂	Mean
N ₀	1448	1506	1572	1399	1506	1580	1753	1538
N ₁	1753	1753	2049	1802	1572	1794	2049	1825

= 170.6 lb./ac.
= 295.5 lb./ac.

Crop :- Paddy (Kharif).

Site :- M.A.E. Farm, Bagwai.

Ref :- M.P. 55(TCM).

Type :- 'M'.

Object :—Type X—To study the effect of different sources and levels of N on Paddy

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Medium black loam. (b) N.A. (iii) N.A./June—July. (iv) to (vi) N.A. (vii) Irrigated. (viii) and (ix) N.A. (x) November—December.

2. TREATMENTS :

All combinations of (1) and (2)+a control

(1) 3 sources of N : $S_1=A/S$, $S_2=$ Nitro chalk and $S_3=$ Ammono. chloride.

(2) 3 levels of N : $N_1=20$, $N_2=40$ and $N_3=60$ lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 10. (b) N.A. (ii) 4. (iv) and (v) N.A. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Slight attack of rice bug. (iii) Grain yield. (iv) 1955—1956. (b) and (c) N.A. (v) to (vii) Nil.

5. RESULTS :

(i) 2187 lb./ac. (ii) 227.1 lb./ac. (iii) Main effects of N, S and control vs. others are highly significant. (iv) Av. yield of grain in lb./ac.

Control = 1479 lb./ac.

	S ₁	S ₂	S ₃	Mean
N ₁	2180	2042	1851	2024
N ₂	2520	2250	2105	2292
N ₃	2613	2719	2116	2483
Mean	2438	2337	2024	2266

S.E. of any marginal mean = 65.6 lb./ac.

S.E. of body of table or control mean = 113.6 lb./ac.

Crop :- Paddy (Kharif).**Ref :- M.P. 54(TCM).****Site :- M.A.E. Farm, Reora.****Type :- 'M'.**

Object :—Type II—To study the effect of time of application of N to Paddy.

1. BASAL CONDITIONS :(i) (a) to (c) N.A. (ii) (a) Mixed red and black soil. (b) N.A. (iii) N.A./Last week of July. (iv) (a) to (c) N.A. (v) 20 lb./ac. of P₂O₅. (vi) N.A. (vii) Unirrigated. (viii) N.A. (ix) 32°. (x) October.**2. TREATMENTS :**

Same as in expt. no. 56 (MAE) type V on page 75.

3. DESIGN :

Crop :- Paddy (Kharif).

Ref :- M.P. 55(TCM).

Site :- M.A.E. Farm, Reora.

Type :- 'M'.

Object :—Type VI—To find out the residual effect of P on the yield of Paddy.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Mixed red and black soil. (b) N.A. (iii) N.A./16.8.1955. (iv) and (v) N.A. (vi) T-43. (vii) Unirrigated. (viii) and (ix) N.A. (x) November-December.

2. TREATMENTS :

Same as in expt. no. 56 (MAE) type VI (TCM) on page 67.

3. DESIGN :

(i) R B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) and (v) N.A. (vi) Yes.

4. GENERAL :

(i) Below normal. (ii) Nil. (iii) Grain yield. (iv) (a) 1954—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 475 lb./ac. (ii) 82.3 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	1	(2, 3, 8, 9)	4	5	6	7	10	11	12
Av. yield	312	403	393	376	491	608	548	560	797

S.E./mean except (2, 3, 8, 9) = 41.2 lb./ac.

S.E./mean for (2, 3, 8, 9) = 20.6 lb./ac.

Crop :- Paddy.

Ref :- M.P. 55(TCM).

Site :- M.A.E. Farm, Reora.

Type :- 'M'.

Object :—Type IX—To study the effects of N, P and F.Y.M. on the yield of Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Gram. (c) 5 C.L./ac. of F.Y.M. (ii) (a) Mixed black and red soil. (b) N.A. (iii) 9.7.1955. (iv) (a) N.A. (b) Transplanting. (c) 65 lb./ac. (d) and (e) N.A. (v) Nil. (vi) N—22 (early). (vii) Un-irrigated. (viii) 2 weedings. (ix) 20.50°. (x) 12.10.1955.

2. TREATMENTS :

All combinations of (1), (2) and (3) :

(1) 3 levels of N as A/S : $N_0=0$, $N_1=20$ and $N_2=40$ lb./ac. of N as A/S.

(2) 3 levels of P_2O_5 as Triple Super : $P_0=0$, $P_1=20$ and $P_2=40$ lb./ac.

(3) 3 levels of F.Y.M. : $F_0=0$, $F_1=60$ and $F_2=120$ mds./ac.

3. DESIGN :

(i) 3^3 confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 1. (iv) (a) $40' \times 27'$. (b) $36' \times 23'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Biometric observations and yield of grain. (iv) (a) 1954—1955. (b) No. (c) Nil. (v) (a) Bagwai. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 891.1 lb./ac. (ii) 254.1 lb./ac. (iii) No effect is significant. (iv) Av. yield of grain in lb./ac.

Crop :- Paddy (Kharif).

Ref :- M.P. 55(TCM).

Site :- M.A.E. Farm, Bagwai.

Type :- 'MV'

Object :- VIII—To study the effect of N and P on different varieties of Paddy.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Medium black loam. (b) N.A. (iii) N.A./June—July. (iv) to (vi) N.A. (vii) Irrigated. (viii) and (ix) N.A. (x) November—December.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 3 varieties : V₁=Local, V₂ and V₃=Improved.

(2) 3 levels of N : N₀=0, N₁=20 and N₂=40 lb./ac.

(3) 3 levels of P₂O₅ : P₀=0, P₁=20 and P₂=40 lb./ac.

Fertilizers applied just before puddling.

3. DESIGN :

(i) 3³ confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 1. (iv) and (v) N.A. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) N.A. (iii) Grain yield. (iv) (a) 1955—1956. (b) and (c) —. (v) to (vii) Nil.

5. RESULTS :

(i) 1845 lb./ac. (ii) 121.0 lb./ac. (iii) Main effects of V, N and P and interaction N×P are highly significant. Interaction V×P is significant. (iv) Av. yield of grain in lb./ac.

Object :- To compare different methods of Paddy cultivation.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) N.A. (ii) (a) *Kanhar*. (b) Refer soil analysis, Labhandi. (iii) 21.6.1956. (iv) (a) 2 ploughings by *desi* plough. (b) to (e) As per treatments. (v) F.Y.M. at 40 lb./ac. (vi) *Gurmatia*. (vii) Irrigated. (viii) *Biassi* operation in T_1 1 weeding by hand. (ix) 39.94". (x) 11.11.1956.

2. TREATMENTS :

T_1 =Paddy sown by broadcasting at 100 lb./ac. and *biassi*.

T_2 =Paddy drilled in lines at 50 lb./ac.

T_3 =Seedlings transplanted ($9'' \times 9''$ spacing and 4 seedlings/hole).

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 6. (iv) (a) N.A. (b) 1/40 ac. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) Grain and straw yield. (iv) (a) 1952—1956. (b) N.A. (c) Nil. (v) (a) Durg and Waraseoni. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 1491 lb./ac. (ii) 129.0 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃
Av. yield	1413	1427	1633
S.E./mean = 52.7 lb./ac.			

Crop :- Paddy (Kharif).

Ref :- M.P. 58(64).

Site :- State Mechanised Farm, Reora.

Type :- 'C'.

Object :- To study the effect of different methods of sowing on the yield of Paddy crop.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Mixed red and black soil. (b) N.A. (iii) As per treatments. (iv) (a) Ploughing by *desi* plough. (b) As per treatments. (c) N.A. (d) Row to row 10". (e) N.A. (v) 112 lb./ac. of Super+56 lb./ac. of A/S. (vi) T-43. (vii) Unirrigated. (viii) 2 weedings and *biassi* on 4.9.1958. (ix) and (x) N.A.

2. TREATMENTS :

4 sowing methods : T₁=Broadcasting on 5.8.1958, T₂=Sowing germinated seed on 5.8.1958, T₃=Transplanting on 11.8.1959 and T₄=*Biassi* on 5.8.1958.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) (a) 26'×17'. (b) 24'×15'. (v) 1'×1'. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Grain yield. (iv) (a) to (c) N.A. (v) (a) and (b) N.A. (vi) and (vi) Nil.

5. RESULTS :

(i) 1053 lb./ac. (ii) 177.4 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄
Av. yield	938	968	1391	915

S.E./mean = 72.4 lb./ac.

Crop :- Paddy (Kharif).

Ref :- M.P. 59(144).

Site :- State Mechanised Farm, Reora.

Type :- 'C'.

Object :- To study the effect of different cultural practices at the time of sowing of Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Gram. (b) Gram. (c) N.A. (ii) (a) Medium black soil. (b) N.A. (iii) 28, 29.7.1959. (iv) (a) 2 ploughings. (b) As per treatments. (c) 70 lb./ac. (d) 8" between rows. (e) N.A. (v) Nil. (vi) EB-17. (vii) Unirrigated. (viii) 2 weedings. (ix) 55.2". (x) 27.10.1959.

2. TREATMENTS :

6 methods of sowing : C₁=Sowing in lines dry, C₂=Transplanting, C₃=(Puddling) *lau* broadcasting, C₄=(Puddling) *lau* in line, C₅=*Biassi* and C₆=Sowing broadcast.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 6. (iv) (a) and (b) 33'×16½'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) to (c) N.A. (v) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 590 lb./ac. (ii) 257.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	C ₁	C ₂	C ₃	C ₄	C ₅	C ₆
Av. yield	480	657	790	480	597	537

S.E./mean = 105.0 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 59(145).

Site :- State Mechanised Farm, Reora.

Type :- 'C'.

Object :—To study the effect of different seed rates on Paddy.

1. BASAL CONDITIONS :

(i) (a) Paddy—Gram. (b) Gram. (c) N.A. (ii) (a) Medium black soil. (b) N.A. (iii) 25.7.1959. (iv) (a) 3 ploughings. (b) Broadcasting. (c) 70 lb./ac. (d) and (e) N.A. (v) Nil. (vi) N—22. (vii) Unirrigated. (viii) 2 weedings. (ix) 55.2". (x) 7.10.1963.

2. TREATMENTS :

4 seed rates : S₁=10, S₂=20, S₃=30 and S₄=40 lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) (a) 38'×18'. (b) 36'×16'. (v) 1'×1'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) to (c) N.A. (v) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 751 lb./ac. (ii) 194.3 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatments	S ₁	S ₂	S ₃	S ₄
Av. yield	573	885	825	721

S.E./mean = 79.3 lb./ac.

Crop :- Paddy.

Ref :- M.P. 59(N.A.).

Site :- State Mechanised Farm, Reora.

Type :- 'C'.

Object :—To study the effect of different cultural practices on Paddy crop.

1. BASAL CONDITIONS :

(i) (a) Paddy—Gram (b) Gram. (c) N.A. (ii) (a) Medium black soil. (b) N.A. (iii) 27.7.1959. (iv) (a) 3 ploughing. (b) Broadcasting. (c) 70 lb./ac. (d) 8" between rows. (e) N.A. (v) Nil. (vi) N—22. (vii) Unirrigated. (viii) Two weedings. (ix) N.A. (x) 25.10.1959.

2. TREATMENTS :

5 cultural treatments : T₁=No cultivation immediately after harvest, T₂=Cultivation immediately after harvest by *desi* plough once, T₃=Cultivation immediately after harvest by *desi* plough twice (cross), T₄=Cultivation immediately after harvest by light iron plough (once) and T₅=Cultivation immediately after harvest by light iron plough twice (cross).

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 8. (iv) (a) and (b) 14'×60'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) to (vii) N.A.

5. RESULTS :

(i) 587 lb./ac. (ii) 60.4 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅
Av. yield	518	570	603	622	622

S.E./mean = 21.4 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 54(91).

Site :- Govt. Res. Farm, Waraseoni.

Type :- 'C'.

Object :—To compare the effect of different methods of Paddy sowing.

1. BASAL CONDITIONS :

(i) (a) N.A. (b) Paddy. (c) N.A. (ii) (a) Two types of soils. Sandy loam and loamy. (b) N.A. (iii) 26.6.1954. (iv) (a) Land was pulverised and levelled. (b) to (e) As per treatments. (v) N.A. (vi) *Luchai* × *Gurmatia* (late) (vii) Irrigated. (viii) N.A. (ix) 34.42". (x) 15.11.1954.

2. TREATMENTS :

T₁=Broadcasting at 100 lb./ac. on 26.6 1954.

T₂=Line sowing ie. hand dibbling at 70 lb./ac. on 26.6.1954.

T₃=Transplantation by Japanese method with spacing 9"×9" on 25.7.1954.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 6. (iv) (a) and (b) 1/40 ac. (v) Nil. (vi) Yes,

4. GENERAL :

(i) and (ii) N.A. (iii) Height, tillering, weight of grain and straw. (iv) (a) 1954—N.A. (b) N.A. (c) Nil. (v) (a) Labhandi and Durg. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 1212 lb./ac. (ii) 278.3 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃
Av. yield	969	732	1936

S.E./mean = 113.6 lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 59(74)

Site :- Govt. Res. Farm, Waraseoni.

Type :- 'C'.

Object :—To compare different methods of Paddy cultivation.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) N.A. (ii) (a) *Morand*. (b) N.A. (iii) N.A. (iv) (a) Ploughing and cross ploughing (b) Transplanted. (c) 80 lb./ac. (d) and (e) As per treatments. (v) N.A. (vi) *Bud Bako* × *Burma*. (vii) Irrigated. (viii) One hand weeding and digging. (ix) 49.46". (x) N.A.

2. TREATMENTS :

T₁=Local method of Paddy cultivation : spacing 4"×4" and one seedling/hole

T₂=Japanese method of Paddy cultivation : spacing 9"×9" and 4 seedling/hole.

T₃=Chainese methods of Paddy cultivation : spacing 6"×6" and 2 seedlings/hole.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 2. (iv) (a) T₁=28½'×28½'; T₂=26½'×26½' and T₃=28'×28'. (b) T₁=1/53 ac., T₂=1/60.6 ac. and T₃=1/55.6 ac. (b) N.A. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Very poor. (ii) N.A. (iii) Grain yield. (iv) (a) to (c) No. (v) (a) and (b) N.A. (vi) Nil. (vii) Results taken from annual report.

5. RESULTS :

(i) 1071 lb./ac. (ii) 108.6 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃
Av. yield	821	1697	695

S.E./mean = 76.8 lb./ac.

Crop :- Paddy (Kharif).

Ref :- M.P. 54(127).

Site :- Govt. Res. Farm, Labhandi.

Type :- 'CV'.

Object :- To study the economics of growing late Paddy alone against medium Paddy followed by Utera crops.

1. BASAL CONDITIONS :

(i) (a) and (b) N.A. (c) Nil. (ii) (a) *Dorsa*. (b) N.A. (iii) Paddy 8, 11, 6.1954/7.8.1954 and Utera crops : 4.11.1954. (iv) (a) 2 ploughings by meston plough, puddling by wooden *datari* and levelling (b) transplanting. (c) Paddy 70 lb./ac. and utera crops N.A. (d) 4"×5". (e) N.A. (v) 40 lb./ac. of N as F.Y.M. (vi) As per treatments. (vii) Irrigated. (viii) N.A. (ix) 40.19". (x) 25.11.1954.

5. TREATMENTS :

4 treatments : T₁=Paddy cross no. 116 followed by lakh, T₂=Paddy cross no. 116 followed by urid, T₃=Paddy cross no. 116 followed by linseed and T₄=Paddy *Luchai*×*Gurmaia*×*Burma* no. 2 alone.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 5. (iv) (a) and (b) 33'×33'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Not satisfactory. (ii) Nil. (iii) Grain and straw yield. (iv) (a) 1954—contd. (b) No. (c) Nil. (v) (a) N.A. (b) Nil. (vi) N.A. (vii) As the other crops failed yield analysis of Paddy is given.

5. RESULTS :

(i) 1020 lb./ac. (ii) 109.54 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄
Av. yield	1008	992	1080	1000

S.E./mean = 48.99 lb./ac.

Crop :- Paddy

Ref :- M.P. 58(75).

Site :- Govt. Res. Farm, Labhandi.

Type :- 'CV'.

Object :- To find out the economics of growing late Paddy alone, against medium Paddy followed by Utera crops.

1. BASAL CONDITIONS :

(i) (a) Utera crops—Paddy. (b) As per treatments. (c) 40 lb./ac. of N as F.Y.M. (ii) (a) *Matasi*. (b) N.A. (iii) 4.8.1958. (iv) 2 ploughings by *desi* plough. (b) Transplanting. (c) 80 lb./ac. (d) 4"×4". (e) 1 to 2 seeds/hole. (v) 40 lb./ac. of N as F.Y.M. (vi) As per treatments. (vii) Irrigated. (viii) 1 hand weeding. (ix) 61.51". (x) 10.12.1958.

2. TREATMENTS :

4 treatments : T_1 =Paddy cross no. 116 (medium) followed by *lakh*, T_2 =Paddy cross no. 116 (medium) followed by urid, T_3 =Paddy cross no. 116 (medium) followed by linseed ana T_4 =Paddy *Luchai* × *Gurmatia* × *Burma* no. 2 (late) alone.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 5. (iv) (a) $33' \times 33'$. (b) $31' \times 31'$. (v) $1' \times 1'$. (vi) Yes.

4. GENERAL :

Crop :- Paddy.

Ref :- M.P. 54(60).

Site :- Govt. Agri. Res. Stn., Adhartal.

Type :- 'CM'.

Object:—To find out a suitable manurial dose for Paddy sown with different spacings and no. of seedlings/hole.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) As per treatments. (ii) (a) *Sehra*. (b) N.A. (iii) 5 to 12.8.1954. (iv) (a) Ploughing and preparing of land. (b) Transplanting. (c) N.A. (d) and (e) As per treatments. (v) F.Y.M. or compost at 10 C.L./ac. (vi) *Luchai* × *Gurmaia* × *Burma* (late). (vii) Irrigated. (viii) N.A. (ix) 57.67". (x) 29 to 31.12.1954.

2. TREATMENTS :

Main-plot treatments :

M_1 40 lb./ac. of N+40 lb./ac. of P_2O_5 applied at the time of transplanting, M_2 =40 lb./ac. of N+40 lb./ac. of P_2O_5 , M_3 =60 lb./ac. of N+60 lb./ac. of P_2O_5 and M_4 =80 lb./ac. of N+80 lb./ac. of P_2O_5 .

N applied as A/S and P_2O_5 as Super. Treatments M_2 , M_3 and M_4 applied in two doses half at transplanting and half one month after.

Sub-plot treatments :

All combinations of (1) and (2)+an extra treatment $D_0S_0=4" \times 4"$ with 1 seedling/hole.

(1) 2 spacings : $D_1=9" \times 6"$ and $D_2=9" \times 9"$.

(2) seedlings/hole : $S_1=2$ and $S_2=4$.

3. DESIGN :

(i) Split-plot. (ii) (a) 4 main-plots/replication ; 5 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 1/50 ac. (b) 1/80 ac. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) N.A. (iii) Height, tillers, weight of grain and straw. (iv) (a) 1953—1958. (b) Yes. (c) N.A. (v) (a) Labhandi. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 2213 lb./ac. (ii) (a) 1770.8 lb./ac. (b) 414.4 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	M_1	M_2	M_3	M_4	Mean
D_0S_0	2080	2720	2120	2340	2315

Crop :- Paddy (Kharif).

Ref :- M.P. 56(MAE).

Site :- M.A.E. Farm, Raipur.

Type :- 'CM'.

Object :-Type VII—To study the effect of cultural practices and manuring on the yield of Paddy.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) As per treatments. (iv) (a) and (b) N.A. (c) 40 lb./ac. (d) and (e) As per treatments. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) and (ix) N.A. (x) Second to third week of December, 1956.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1), (2) and (3)

(1) 3 dates of planting : $D_1=15.7.1956$, $D_2=1.8.1956$ and $D_3=15.8.1956$.

(2) 3 spacings : $S_1=6'' \times 6''$, $S_2=8'' \times 8''$ and $S_3=10'' \times 10''$.

(3) No. of seedlings/hole : $R_1=2$, $R_2=4$ and $R_3=6$.

Sub-plot treatments :

All combinations of (1) and (2)

(1) 2 levels of N as A/S : $N_0=0$ and $N_1=40$ lb./ac.

(2) 2 levels of P_2O_5 as Super : $P_0=0$ and $P_1=40$ lb./ac.

3. DESIGN :

- (i) Split-plot confd. (ii) 9 main-plots/block ; 3 blocks/replication ; 4 sub-plots/main-plot. (b) N.A. (iii) 1.
(iv) (a) N.A. (b) 32'×14'. (v) N.A. (vi) Yes.

4 . GENERAL :

- (i) N.A. (ii) Nil. (iii) Grain yield. (iv) (a) 1956—contd. (b) N.A. (c) Nil. (v) (a) Bagwai and Reora.
(vi) and (vii) Nil.

5. RESULTS :

- (i) 1989 lb./ac. (ii) (a) 574.2 lb./ac. (b) 317.9 lb./ac. (iii) Main effect of N is highly significant. Effect of P and interactions $P \times D$, $P \times R$ and $P \times D \times R$ are significant. (iv) Av. yield of grain in lb./ac.

Crop :- Paddy (*Kharif*).

Ref :- M.P. 59(135).

Site :- Govt. Agri. Res. Farm, Rewa.

Type :- 'D'.

Object :-To study the effect of weedicides on Paddy crop.

1. BASAL CONDITIONS :

(i) (a) Paddy—Wheat. (b) Wheat. (c) N.A. (ii) (a) Clay loam. (b) N.A. (iii) 2.7.1959. (iv) 3 ploughings. (b) Broadcasting. (c) 40 lb./ac. (d) and (e) N.A. (v) Nil. (vi) T—43. (vii) Unirrigated. (viii) Nil. (ix) 44.3". (x) 7.10.1959.

2. TREATMENTS :

9 weedicides: D₀=No weeding (control), D₁=Hand weeding, D₂= $\frac{1}{2}$ lb./ac. of 2—4—D in 100 gallons of water, D₃=1 lb./ac. of 2—4—D in 100 gallons of water, D₄= $1\frac{1}{2}$ lb./ac. of 2—4—D in 100 gallons of water, D₅= $\frac{1}{2}$ lb./ac. of 2—4—D in 2 of gallons diesel/ac., D₆=1 lb./ac. of 2—4—D in 2 gallons of diesel/ac., D₇= $1\frac{1}{2}$ lb./ac. of 2—4—D in 2 gallons of diesel/ac. and D₈= $1\frac{1}{2}$ lb./ac. 2—4—D in A/S and SO₄.

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) and (b) 35' × 12'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) to (c) N.A. (v) to (vii) Nil.

5. RESULTS :

(i) 1355 lb./ac. (ii) 259 3 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	D ₀	D ₁	D ₂	D ₃	D ₄	D ₅	D ₆	D ₇	D ₈
Av. yield	1724	1283	1115	1193	1400	1465	1232	1167	1615

S.E./mean = 129.7 lb./ac.

Crop :- Paddy (Kharif),

Ref :- M.P. 56(72).

Site :- Govt. Agri. Res. Stn., Adhartal.

Type :- 'D'.

Object :—To study the effect of insecticides against Rice stem borer on Paddy.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) N.A. (ii) (a) *Sehra*. (Sandy) (b) N.A. (iii) N.A. (iv) (a) Ploughing by Malwa plough. Puddling by *datari* and *patiya*. (b) Transplanted by Japanese method. (c) and (d) N.A. (e) 1. (v) F.Y.M. at 20 C.L./ac. Ammo. phos. at 200 lb./ac. on 10, 11.7.1956 and Ammo. phos. at 200 lb./ac. on 20, 21.7.1956. (vi) *Chhatttri*. (vii) Irrigated. (viii) 1 weeding. (ix) and (x) N.A.

2. TREATMENTS :

T₁ = Endrine 1% at 20 lb./ac.

T₂ = Dieldrine 1½% at 13½ lb./ac.

T₃ = D.D. T. 5% at 10 to 12 lb./ac.

T₄ = B.H.C. 5% at 10 to 12 lb./ac.

T₅ = Control

Insecticides were applied on 9.9.1956 and 9.10.1956.

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) (a) and (b) 1/10 ac. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Attack of stem borer. (iii) Grain yield. (iv) (a) 1956. (b) and (c) N.A. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 1405 lb./ac. (ii) 495.5 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅
Av. yield	1363	1660	1338	1120	1543

S.E./mean = 247.8 lb./ac.

Crop :- Wheat.

Ref :- M.P. 55(44).

Site :- Govt. Agri. Res. Stn., Adhartal.

Type :- 'M'.

Object :—To find the residual effect of Super applied to the previous Gram crop on Wheat.

1. BASAL CONDITIONS :

(i) (a) Gram—Wheat—Gram. (b) Gram. (c) As per treatments. (ii) (a) *Kabar II*. (b) N.A. (iii) 1.12.1955. (iv) (a) N.A. (b) Drilling. (c) 100 lb./ac. (d) and (e) N.A. (v) Nil. (vi) Hy—25 (early). (vii) Unirrigated. (viii) N.A. (ix) 64.66°. (x) 3.4.1956.

2. TREATMENTS :

5 levels of P_2O_5 as Super : $P_0=0$, $P_1=15$, $P_2=20$, $P_3=25$ and $P_4=30$ lb./ac.
Super was applied to the previous gram crop.

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) (a) and (b) $66' \times 16\frac{1}{2}'$ (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Yield of grain. (iv) (a) 1952—contd. (b) As per treatments. (c) No. (v) to (vii) Nil.

5. RESULTS :

(i) 168 lb./ac. (ii) 26.8 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	P_0	P_1	P_2	P_3	P_4
Av. yield	204	186	139	168	144

S.E./mean = 13.4 lb./ac.

Crop :- Wheat (*Rabi*).

Ref :- M.P. 56(75).

Site:- Govt. Agri. Res. Stn., Adhartal.

Type :- 'M'.

Object :—To study the effect of G.M., N and P fertilizers on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) As per treatments. (ii) (a) Sandy. (b) N.A. (iii) 27.11.1956. (iv) (a) Burying the G.M. as per treatments. (b) N.A. (c) Sannhemp : 80 lb./ac., cowpea : 40 lb./ac. and wheat : 100 lb./ac. (d) and (e) N.A. (v) Nil. (vi) Hy—65. (vii) Irrigated. (viii) N.A. (ix) Nil. (x) 10 and 11.4.1957.

2. TREATMENTS :

Main-plot treatments :

2 G.M. crops : G_1 =Sannhemp and G_2 =Cowpea.

Sub-plot treatments :

7 manurial treatments : M_0 =Only G.M., M_1 =M to wheat, M_2 =M to G.M. at sowing, M_3 =M at burying the G.M., M_4 =M' to wheat, M_5 =M' to G.M. at sowing and M_6 =M' at burying the G.M.

M=20 lb./ac. of N as A/S+20 lb./ac. of P_2O_5 as Super and M'=40 lb./ac. of N as A/S+40 lb./ac. of P_2O_5 as Super.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/replication ; 7 sub-plots/main-plot. (b) N.A. (iii) No. (iv) (a) and (b) $40' \times 18'$. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Not satisfactory. (ii) Attack of black and brown rust limited to leaves only. (iii) Grain and straw yield. (iv) (a) and (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 374 lb./ac. (ii) (a) 143.3 lb./ac. (b) 147.8 lb./ac. (iii) No effect is significant. (iv) Av. yield of grain in lb./ac.

	M ₀	M ₁	M ₂	M ₃	M ₄	M ₅	M ₆	Mean
G ₁	486	242	320	504	443	337	324	379
G ₂	392	366	396	418	435	348	285	370
Mean	439	304	333	461	439	342	304	374

Crop :- Wheat (Rabi).

Ref :- M.P. 55(58).

Site :- Govt. Seed and Demons. Farm, Amlaha.

Type :- 'M'.

Object :—To study the effect of different sources and levels of N under dry conditions on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) *Kabar*. (b) Refer soil analysis, Amlaha. (iii) 26.11.1955. (iv) (a) 5 *bakherings*. (b) Drilling. (c) 40 srs./ac. (d) and (e) N.A. (v) N.A. (vi) C—591. (vii) Unirrigated. (viii) to (x) N.A.

2. TREATMENTS :

11 manurial treatments : M_0 =Control, M_1 =50 and M_2 =100 lb./ac. of A/S, M_3 =39 and M_4 =77 lb./ac. of A/S/N, M_5 =30 and M_6 =60 lb./ac. of A/N, M_7 =65 and M_8 =130 lb./ac. of C/N, M_9 =22 and M_{10} =44 lb./ac. of Urea.

Manures drilled with seed.

3. DESIGN :

(i) R.B.D. (ii) (a) 11. (b) N.A. (iii) 4. (iv) (a) and (b) 33'×33'. (v) Nil. (vii) Yes.

4. GENERAL :

(i) N.A. (ii) Nil. (iii) Av. height and yield of grain. (iv) (a) No. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 347 lb./ac. (ii) 112.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	M_0	M_1	M_2	M_3	M_4	M_5	M_6	M_7	M_8	M_9	M_{10}
Av. yield	330	362	314	303	302	352	418	321	368	410	341

S.E./mean = 56.4 lb./ac.

Crop :- Wheat (Rabi).

Ref :- M.P. 57(31).

Site :- Govt. Seed and Demons. Farm, Amlaha.

Type :- 'M'.

Object :—To study the effect of A/s and Super on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) *Kabar*. (b) Refer soil analysis, Amlaha. (iii) 11.10.1957. (iv) (a) *Bakhering*. (b) Drilling. (c) to (e) N.A. (v) N.A. (vi) C—591. (vii) Unirrigated. (viii) Weeding and hoeing. (ix) N.A. (x) 18.3.1958.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 58(7) on page 144.

4. GENERAL :

(i) Poor. (ii) N.A. (iii) Yield of grain. (iv) (a) 1957—1958. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 213 lb./ac. (ii) 7.6 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	M_0	M_1	M_2	M_3
Av. yield	144	226	226	257

Object :—To study the response of different levels of P and N on the yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) Legume—Wheat. (b) *Lobia*—1. (c) Nil. (ii) (a) Sandy loam. (b) N.A. (iii) 21.11.1957. (iv) (a) 2 ploughings by soil turning plough, 4 times discing and planking. (b) Drilling. (c) 30 srs./ac. (d) 18". (e) N A. (v) Nil. (vi) NP—710 (medium). (vii) Irrigated. (viii) 1 weeding and 2 interculturings. (ix) Nil. (x) 25 to 28.3.1958.

2. TREATMENTS :

Same as in expt. no. 56(13) on page 162.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 16. (b) N.A. (iii) 4. (iv) (a) 30'×19'. (b) 26'×15'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain weight. (iv) (a) 1956—contd. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 1757 lb./ac. (ii) 478.0 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	P ₀	P ₁	P ₂	P ₃	Mean
N ₀	1560	1839	1742	1444	1646
N ₁	1522	1771	1775	1738	1702
N ₂	1957	1429	2041	1946	1843
N ₃	1501	1957	2273	1609	1835
Mean	1635	1749	1958	1684	1757

S.E. of any marginal mean	= 120 lb./ac.
S.E. of body of N×P table	= 239 lb./ac.

Crop :- Wheat (*Rabi*).**Ref :- M.P. 59(126).****Site :- Instt. of Plant Industry, Indore.****Type :- 'M'.**

Object :—To find out the suitable time of application of G.M. and suitable doses of P for higher yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Black cotton soil. (b) N.A. (iii) 15.10.1959. (iv) (a) 1 ploughing and 1 harrowing. (b) Drilling. (c) 65 lb./ac. (d) 14"×5". (e) N.A. (v) 30 lb./ac. of P₂O₅. (vi) C—591. (vii) Irrigated. (viii) 2 weedings. (ix) 7.9". (x) 27.3.1960.

2. TREATMENTS :

All combinations of (1) and (2)

- (1) 6 times of applying G.M : T₀=Fallow, T₁=Every year, T₂=Once in 3 years, T₃=Alternate years
T₄=G.M. in first two years only and T₅=Continuously for 3 year.
- (2) 3 levels of P₂O₅ as Super : P₀=0, P₁=40 and P₂=80 lb./ac.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 18. (b) N.A. (iii) 4. (iv) (a) 40'×21'. (b) 35'×17'. (v) 2.5'×2'. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain yield. (iv) (a) N.A. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 728 lb./ac. (ii) 93.1 lb./ac. (iii) Main effect of T is highly significant and of P is significant. (iv) Av. yield of grain in lb./ac.

	T ₀	T ₁	T ₂	T ₃	T ₄	T ₅	Mean
P ₀	628	694	661	671	717	748	686
P ₁	692	783	711	716	817	772	748
P ₂	660	860	663	647	810	854	749
Mean	660	779	678	678	781	791	728

S.E. of T marginal mean = 26.9 lb./ac.
 S.E. of P marginal mean = 19.0 lb./ac.
 S.E. of body of table = 46.6 lb./ac.

Crop :- Wheat (Rabi).

Ref :- M.P. 59(138).

Site :- Govt. Agri. Res. Farm, Kuthulia.

Type :- 'M'.

Object :—To study the effect of G.M. and P on Wheat.

1. BASAL CONDITIONS :

(i) (a) G.M.—Wheat. (b) G.M. crops. (c) N.A. (ii) (a) Clay loam. (b) N.A. (iii) 4.11.1959. (iv) (a) 4 ploughings. (b) Line sowing. (c) 80 lb./ac. (d) 9" between rows. (e) N.A. (v) Nil. (vi) C—591. (vii) Unirrigated. (viii) Nil. (ix) 1.81". (x) 28.3.1960.

2 TREATMENTS :

All combinations of (1) and (2)

(1) 5 G.M crops : G₀=No G.M, G₁=Moong, G₂=G.L., G₃=Tarota and G₄=Cowpea.

(2) 2 levels of P₂O₅ as Super : P₀=0 and P₁=20 lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 10. (b) N.A. (iii) 4. (iv) (a) 40'×12'. (b) 36'×10'. (v) 2'×1'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) N.A. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 1274 lb./ac. (ii) 152.1 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	G ₀	G ₁	G ₂	G ₃	G ₄	Mean
P ₀	1299	1361	1326	1232	1315	1307
P ₁	1216	1209	1333	1252	1201	1242
Mean	1257	1285	1329	1242	1258	1274

S.E. of G marginal mean = 53.8 lb./ac.
 S.E. of P marginal mean = 34.0 lb./ac.
 S.E. of body of table = 76.0 lb./ac.

Crop :- Wheat.**Ref :- M.P. 54(88).****Site :- Govt. Res. Farm, Labhandi.****Type :- 'M'.**

Object :—To study the effect of treating the seed before sowing on the yield of Wheat.

1. BASAL CONDITIONS:(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) *Kanhar*. (b) Refer soil analysis, Labhandi. (iii) 5.11.1959. (iv) (a) to (e) N.A. (v) N.A. (vi) A—115 (local). (vii) Irrigated. (viii) Weeding. (ix) N.A. (x) 5.3.1955.**2. TREATMENTS**3 manurial treatments : T_1 = Dry seed, T_2 = Seed soaked in pure water for 24 hours and T_3 = Seed soaked in 13.2% solution of A/S.**3. DESIGN :**

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 6. (iv) (a) and (b) 45' × 24'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Yield of grain. (iv) (a) 1953—1955. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 360 lb./ac. (ii) 84.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T_1	T_2	T_3
Av. yield	320	397	364

S.E./mean = 34.5 lb./ac.

Crop :- Wheat.**Ref :- M.P. 55(22).****Site :- Govt. Res. Farm, Labhandi.****Type :- 'M'.**

Object :—To study the effect of treating the seed before sowing on the yield of Wheat.

1. BASAL CONDITIONS :(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) *Kanhar*. (b) Refer soil analysis, Labhandi. (iii) 12.12.1955. (iv) (a) Ploughing. (b) Drilling. (c) to (e) N.A. (v) Nil. (vi) A—115 (local). (vii) Irrigated. (viii) Weeding. (ix) N.A. (x) 4.4.1956.**2. TREATMENTS to 4. GENERAL :**

Same as in expt. no. 54(88) above.

5. RESULTS :

(i) 230 lb./ac. (ii) 34.8 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	T_1	T_2	T_3
Av. yield	247	250	193

S.E./mean = 14.2 lb./ac.

Crop :- Wheat (*Rabi*).**Ref :- M.P. 58(18).****Site :- Govt. Seed and Demons. Farm, Mahagarh.****Type :- 'M'.**

Object :—To find out the most suitable manurial schedule for Wheat under local conditions.

1. BASAL CONDITIONS :(i) (a) Nil. (b) *Urid*. (c) Nil. (ii) (a) Medium black soil. (b) Refer soil analysis, Mahagarh. (iii) 21.11.1958. (iv) (a) N.A. (b) Seeds drilled. (c) to (e) N.A. (v) Nil. (vi) U. No. 6. (vii) to (ix) N.A. (x) 14.4.1959.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 levels of N : $N_0=0$, $N_1=20$ and $N_2=40$ lb./ac.(2) 3 levels of P_2O_5 : $P_0=0$, $P_1=20$ and $P_2=40$ lb./ac.**3. DESIGN :**

(i) Fact. in R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) and (b) 1/60.5 ac. (v) N.A. (vi) Yes.

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'M'.

Object :—To study the effect of treating the seed before sowing on the yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) 15 lb./ac. of N as A/S+15 lb./ac. of P₂O₅ as Super. (ii) (a) Clay loam. (b) Refer soil analysis, Powarkheda. (iii) 7.11.1954. (iv) (a) *Bakhering*. (b) Sown with *Nari*. (c) 80 lb./ac. (d) Between lines 12". (e) N.A. (v) Nil. (vi) Hy 11—Improved (medium). (vii) Unirrigated. (viii) Nil. (ix) 1.83". (x) 17.3.1955.

2. TREATMENTS :

3 seed treatments : T₁=No soaking, T₂=Soaking in pure water for 24 hours before sowing and T₃=Soaking in 13.2% solution of A/S.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 6. (iv) (a) $24' \times 45'$. (b) $18' \times 39'$. (v) $3' \times 3'$. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 340 lb./ac. (ii) 59.4 lb./ac. (iii) Treatments differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃
Av. yield	353	374	293

S.E./mean = 24.2 lb./ac.

Crop :- Wheat.

Ref :- M.P. 55(9).

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'M'.

Object :—To study the effect of treating the seed before sowing on the yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) 15 lb./ac of N+15 lb./ac. of P₂O₅. (ii) (a) Clay loam. (b) Refer soil analysis, Powarkheda. (iii) 7.11.1955. (iv) (a) *Bakhering*. (b) Sown with *Nari*. (c) 80 lb./ac (d) Between lines 12". (e) N.A. (v) No. (vi) Hy 11—Improved (medium). (vii) Unirrigated. (viii) Nil. (x) 0.93". (x) 28.4.1956.

2. TREATMENTS to 4. GENERAL :

Same as in expt no. 54(11) above.

5. RESULTS :

(i) 334 lb./ac. (ii) 42.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃
Av. yield	321	340	340
S.E./mean = 17.2 lb./ac.			

Crop :- Wheat.

Ref :- M.P. 56(3).

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'M'.

Object :—To study the effect of treating the seed before sowing on the yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) Nil. (ii) (a) Clay loam. (b) Refer soil analysis, Powarkheda. (iii) 9.11.1956. (iv) (a) *Bakhering*. (b) Sowing by *Nari* plough. (c) 80 lb./ac. (d) Between lines 12". (e) N.A. (v) Nil. (vi) Hy 11—Improved (medium). (vii) Unirrigated. (viii) Nil. (ix) 5.92". (x) 25.4.1957.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54(11) on page 177.

4. GENERAL :

(i) Good. (ii) Severe hail storm just before harvest. (iii) Grain yield. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 403 lb./ac. (ii) 76.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	T ₁	T ₂	T ₃
Av. yield	377	433	398

S.E./mean = 31.4 lb./ac.

Crop :- Wheat.

Ref :- M.P. 57(35).

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'M'.

Object :—To study the effect of different levels of N and P on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) Nil. (ii) (a) Clay loam. (b) Refer soil analysis, Powarkheda. (iii) 30, 31.10.1957. (iv) (a) *Bakhering*. (b) Sown with *Nari*. (c) 80 lb./ac. (d) Between rows 12". (e) N.A. (v) Nil. (vi) Hy 11—(medium). (vii) Unirrigated. (viii) Nil. (ix) 0.9". (x) 7.4.1958.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 levels of N as A/S : N₀=0, N₁=15 and N₂=30 lb./ac.

(2) 5 levels of P₂O₅ as Super : P₀=0, P₁=15, P₂=30, P₃=45 and P₄=60 lb./ac.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 15. (b) N.A. (iii) 3. (iv) (a) 16½'×33'. (b) 14½'×30'. (v) 1'×1½'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Yield of grain. (iv) (a) 1952—contd. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) Germination in general was poor.

5. RESULTS :

(i) 491 lb./ac. (ii) 140.8 lb./ac. (iii) Main effects of N and P are significant. (iv) Av. yield of grain in lb./ac.

	P ₀	P ₁	P ₂	P ₃	P ₄	Mean
N ₀	536	540	540	468	361	489
N ₁	643	565	634	561	438	568
N ₂	440	528	482	321	303	415
Mean	540	544	552	450	367	491

S.E. of P marginal mean = 46.9 lb./ac.

S.E. of N marginal mean = 36.3 lb./ac.

S.E. of body of N×P table = 81.3 lb./ac.

Crop :- Wheat (Rabi).

Ref :- M.P. 58(41).

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'M'.

Object :—To study the effect of different levels of N and P on Wheat.

1. BASAL CONDITIONS :

(i) (a) and (b) N.A. (c) Nil. (ii) *Morand*. (b) Refer soil analysis, Powarkheda. (iii) 8.11.1958. (iv) (a) Crossed *bakherings*. (b) Line sowing by *Nari*. (c) 80 lb./ac. (d) 12" line to line. (e) N.A. (v) Nil. (vi) Hy. 11 (mid late). (vii) Unirrigated. (viii) Nil. (ix) N.A. (x) 17.3.1959.

2. TREATMENTS :

Same as in expt. no. 57(35) on page 178.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 15. (b) N.A. (iii) 3. (iv) (a) 33'×16½'. (b) 31'×14'. (v) 1'×1¼'. (v) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain and straw yield. (iv) (a) 1956—1958. (b) No. (c) Nil. (v) to (vii) N.A.

5. RESULTS :

(i) 1151 lb./ac. (ii) 148.9 lb./ac. (iii) Main effect of N alone is highly significant. (iv) Av. yield of grain in lb./ac.

	P ₀	P ₁	P ₂	P ₃	P ₄	Mean
N ₀	956	962	1004	987	905	963
N ₁	1225	1152	1320	1309	1196	1240
N ₂	1142	1177	1282	1365	1276	1248
Mean	1108	1097	1202	1220	1126	1151

S.E. of N marginal mean = 38.4 lb./ac.

S.E. of P marginal mean = 49.6 lb./ac.

S.E. of body of table = 85.9 lb./ac.

Crop :- Wheat.**Ref :- M.P. 54(82).****Site :- Govt. Wheat Res. Farm, Powarkheda.****Type :- 'M'.****Object :—**To study the effect of nitrogenous fertilizers alone with and without lime on the yield of Wheat.**1. BASAL CONDITIONS :**

(i) (a) Nil. (b) Wheat. (c) 15 lb./ac. of N + 15 lb./ac. of P_2O_5 . (ii) (a) Clay loam. (b) Refer soil analysis, Powarkheda. (iii) 5.11.1954. (iv) (a) *Bakherings*. (b) Sown with *Nari*. S.E./mean = 37.9 lb./ac.

Crop :- Wheat (Rabi).**Ref :- M.P. 58(66).****Site :- State Mechanised Farm, Reora.****Type :- 'M'.**

Object :—To study the effect of different G.M. crops on Wheat.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Mixed red and black soil. (b) N.A. (iii) 30.11.1958. (iv) (a) Ploughing by *desi* plough. (b) Sown by *Nari*. (c) 32 srs./ac. (d) Line to line 10". (e) N.A. (v) Nil. (vi) Hy.—65. (vii) Irrigated. (viii) and (ix) N.A. (x) 23.4.1959.

2. TREATMENTS :

4 G.M. crops : G_0 =Control (no G.M.), G_1 =*Dhaincha*, G_2 =*Sanai* and G_3 =*Dhak* green leaves each at 60 mds./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 6. (iv) (a) $50' \times 15'$. (b) $43\frac{1}{2}' \times 10'$. (v) $3\frac{1}{4}' \times 2\frac{1}{2}'$. (vi) Yes.

4. GENERAL :

(i) to (iii) N.A. (iv) (a) 1958—N.A. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 1853 lb./ac. (ii) 261.3 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	G ₀	G ₁	G ₂	G ₃
Av. yield	1836	2012	1894	1669

S.E./mean = 106.7 lb./ac.

Crop :- Wheat.

Ref :- M.P. 54(7).

Site :- State Mechanised Farm, Reora.

Type :- 'M'.

Object :—To find the dose of N, P and K for Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil (b) Paddy. (c) F.Y.M. at 5 C.L./ac. (ii) (a) Mixed red and black soil. (b) N.A. (iii) 5.11.1954. (iv) (a) Two discings by tractor and two ploughings by *desi* plough. (b) *Pora* method. (c) N.A. (d) Row to row 10". (e) N.A. (v) Nil. (vi) C—591 (medium-late). (vii) Unirrigated. (viii) Nil. (ix) 3.50". (x) 26.4.1955.

2. TREATMENTS :

All combinations of (1), (2) and (3)

- (1) 3 levels of N : N₀=0, N₁=20 and N₂=40 lb./ac.
 (2) 3 levels of P₂O₅ : P₀=0, P₁=20 and P₂=40 lb./ac.
 (3) 3 levels of K₂O : K₀=0, K₁=20 and K₂=40 lb./ac.

3. DESIGN :

(i) 3³ confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 40'×27'. (b) 36'×23'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) Poor. (ii) Nil. (iii) Height, tillering, yield of grain and straw, no. of earheads, grains per earhead and weight of 1000 grains. (iv) (a) 1954—1955. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 703 lb./ac. (ii) 236.7 lb./ac. (iii) Main effect of P alone is significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	Mean	K ₀	K ₁	K ₂
P ₀	647	341	424	471	515	397	500
P ₁	670	771	744	728	706	806	673
P ₂	647	937	1150	911	817	959	958
Mean	655	683	773	703	679	721	710

K ₁	738	601	823				
K ₂	631	822	677				

S.E. of any marginal mean

= 78.9 lb./ac.

S.E. of body of table

= 136.7 lb./ac.

Crop :- Wheat.

Ref :- M.P. 54(9).

Site :- State Mechanised Farm, Reora.

Type :- 'M'.

Object :—To study the effect of dose, source and method of application of P on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) F.Y.M. at 15 C.L./ac. (ii) (a) Mixed red and black soil. (b) N.A. (iii) 16.11.1954. (iv) (a) 2 discings and 2 ploughings followed by *Nari* plough. (b) By *Nari* plough. (c) 32 srs./ac. (d) 10" between rows. (e) N.A. (v) 30 lb./ac. of N as A/S before sowing. (vi) C—591 (medium-late). (vii) Unirrigated. (viii) Nil. (ix) 3.00". (x) 25, 26.4.1955.

2. TREATMENTS :

All combinations of (1), (2) and (3)+control (2 plots in each block).

(1) 2 sources of P_2O_5 : S_1 =Triple Super and S_2 =Ammono. Phos.

(2) 2 levels of P_2O_5 : P_1 =20 and P_2 =40 lb./ac.

(3) 3 methods of application of P_2O_5 : M_1 =Broadcasting, M_2 =Band placement and M_3 = $2\frac{1}{2}$ " below the seed.

3. DESIGN :

(i) R.B.D. (ii) (a) 14. (b) N.A. (iii) 3. (iv) (a) $40' \times 24'$. (b) $36' \times 20'$. (v) 2' around the net plot. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Plant height, no. of tillers/plant, no. of grains/earhead and yield of grain. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) to (v i) Nil.

5. RESULTS :

(i) 793 lb./ac. (ii) 183.9 lb./ac. (iii) Main effect of P alone is significant. (iv) Av. yield of grain in lb./ac.

Control = 313 lb./ac.

	S_1	S_2	P_1	P_2	Mean
M_1	821	799	749	872	810
M_2	818	1001	877	942	910
M_3	854	943	768	1029	899
Mean	831	914	798	948	873
P_1	798	798			
P_2	863	1031			

S.E. of S or P marginal mean = 43.3 lb./ac.

S.E. of M marginal mean = 53.1 lb./ac.

S.E. of body of $S \times M$ or $P \times M$ table = 75.1 lb./ac.

S.E. of body of $S \times P$ table = 61.3 lb./ac.

Crop :- Wheat.

Ref :- M.P. 55(5).

Site :- State Mechanised Farm, Reora.

Type :- 'M'.

Object :-To study the effect of dose, source and method of application of P on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Paddy. (c) Nil. (ii) (a) Mixed red and black soil. (b) N.A. (iii) 21.11.1955 (iv) (a) 2 discings by tractor and 2 ploughings by *desi* plough. (b) *Pora* method. (c) 32 srs./ac. (d) and (e) N.A. (v) N as A/S at 50 lb./ac. (vi) C—591 (medium). (vii) Unirrigated. (viii) Nil. (ix) 1.6". (x) 28.4.1956.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54(9) on page 185.

4. GENERAL :

(i) Good stand. (ii) Slight attack of brown rust—early maturing plants got rid of it. (iii) Weight of grain, height and no. of tillerings, no. of grains/earhead and weight of 1000 grains. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 546 lb./ac. (ii) 117.4 lb./ac. (iii) Main effects of M and P are significant. (iv) Av. yield of grain in lb./ac.

Control = 372 lb./ac.

	S ₁	S ₂	P ₁	P ₂	Mean
M ₁	494	462	431	525	478

Object :—To find out the most suitable manurial schedule for Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) 10 C.L./ac. of F.Y.M. (ii) (a) Heavy clay. (b) N.A. (iii) 13.11.1959. (iv) (a) 3 *bakherings*. (b) Seed drilled by *doofan*. (c) 80 lb./ac. (d) Between lines 12". (e) N.A. (v) Nil. (vi) NP-718 (medium). (vii) Unirrigated. (viii) Nil. (ix) 4.48". (x) 29.3.1960.

2. TREATMENTS:

Same as in expt. no. 58(40) on page 191.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 9. (b) N.A. (iii) 6. (iv) (a) 36.3'×15'. (b) 33.3'×13'. (v) 11½'×1'. (vi) Yes.

4. GENERAL :

(i) Satisfactory and germination good. (ii) N.A. (iii) Grain and straw yield. (iv) (a) 1957—1960. (b) No. (c) N.A. (v) (a) and (b) N.A. (vi) Nil. (vii) Manures applied on 13.11.1959.

5. RESULTS :

(i) 881 lb./ac. (ii) 167.4 lb./ac. (iii) Main effect of N and P are highly significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	Mean
P ₀	643	649	750	681
P ₁	691	1043	992	909
P ₂	892	1124	1145	1054
Mean	742	938	962	881

S.E. of any marginal mean = 39.5 lb./ac.

S.E. of body of any table = 68.3 lb./ac.

Crop :- Wheat (*Rabi*).

Ref :- M.P. 59(40).

Site :- Govt. Exptl. Farm, Vidisha.

Type :- 'M'.

Object :—To study the effect of different doses and methods of application of P on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) G.M. crop *Lobia*. (c) As per treatments. (ii) (a) Heavy clay. (b) N.A. (iii) 8.11.1959. (iv) (a) 2 *bakhering*. (b) In lines by *doofan*. (c) 80 lb./ac. (d) Between lines 12". (e) N.A. (v) G.M. with *Lobia*. (vi) NP-718 (medium). (vii) Unirrigated. (viii) N.A. (ix) 4.48". (x) 2.4.1960.

2. TREATMENTS :

All combinations of (i) and (2)

(1) 4 levels of P₂O₅ as Super : P₀=0, P₁=25, P₂=50 and P₃=75 lb./ac.

(2) 4 methods of application of P₂O₅ : M₁=Full dose at sowing G.M. crop, M₂=½ dose at sowing and ½ at burrying G.M., M₃=Full dose at burrying G.M. and M₄=Full dose at sowing Wheat.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 16. (b) N.A. (iii) 4. (iv) (a) 36'×24'. (b) 30'×18'. (v) 3'×3'. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) and (iii) N.A. (iv) (a) 1959—N.A. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 629 lb./ac. (ii) 120.4 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

Control = 580 lb./ac.

	P ₁	P ₂	P ₃	Mean
M ₁	530	610	671	604
M ₂	590	572	696	619
M ₃	703	628	703	678
M ₄	701	658	686	682
Mean	631	617	689	646

S.E. of P marginal or control mean = 30.1 lb./ac.

S.E. of M marginal mean = 34.7 lb./ac.

S.E. of body of table = 60.2 lb./ac.

Crop :- Wheat (Rabi).**Ref :- M.P. 56(MAE).****Site :- M.A.E. Farm, Obedullaganj.****Type :- 'M'.**

Object :-Type V—To study the effect of different sources and time of application of N to Wheat.

1. BASAL CONDITIONS :

(i) (a) to (c) N A. (ii) (a) Medium black soil. (b) N.A. (iii) 23 to 29.10.1956. (iv) (a) 4 to 5 harrowings with *bakher*. (b) N.A. (c) 70 lb./ac. (d) 10" between rows. (e) N.A. (v) 5000 lb./ac. of compost. (vi) N.A. (vii) Irrigated. (viii) N.A. (ix) 6.75". (x) 27 to 31.3.1957.

2. TREATMENTS :

All combinations of (1), (2) and (3) + control.

(1) 3 sources of N : $S_1 = A/S$, $S_2 = A/N$ and $S_3 = \text{Urea}$.

(2) 2 levels of N : $N_1 = 20$ and $N_2 = 40$ lb./ac.

(3) 3 times of application of N : $T_1 = \text{At sowing}$, $T_2 = \text{At 1st irrigation}$ and $T_3 = \frac{1}{2}$ at sowing + $\frac{1}{2}$ at 1st irrigation

3. DESIGN :

(i) $3^2 \times 2 + 3$ confd. (ii) (a) 7 plots/block ; 3 blocks/replication. (b) N.A. (iii) 4. (iv) (a) $16' \times 34'4''$. (b) $14'4'' \times 30'3''$. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Crop lodged. (ii) Severe attack of rust but grain was not effected. (iii) Grain yield. (iv) (a) 1956—contd. (b) N.A. (c) Nil. (v) (a) Bagwai, Powerkheda and Ujjain. (b) N.A. (vi) Hail-storm and heavy rain fall damaged the crop. (viii) Means in $S \times T$ table and their corresponding S.E.'s are unadjusted for block effects.

5. RESULTS :

(i) 1580 lb./ac. (ii) 316.4 lb./ac. (iii) "Control vs. others" alone is highly significant. (iv) Av. yield of grain in lb./ac.

Control mean = 1149 lb./ac.

	T_1	T_2	T_3	Mean	S_1	S_2	S_3
N_1	1640	1552	1542	1578	1536	1538	1659
N_2	1796	1659	1724	1726	1767	1634	1778
Mean	1718	1606	1633	1652	1651	1586	1719
S_1	1749	1449	1756				
S_2	1663	1684	1412				
S_3	1743	1684	1730				

S.E. of marginal mean of S or T = 64.6 lb./ac.

S.E. of marginal mean of N = 52.7 lb./ac.

S.E. of body of $S \times N$ or $T \times N$ table or control mean = 91.3 lb./ac.

S.E. of body of $S \times T$ table = 111.9 lb./ac.

Crop :- Wheat.**Ref :- M.P. 54(TCM).****Site :- M.A.E. Farm, Bagwai.****Type :- 'M'.**

Object :—Type VI—To find out the residual effect of P on the yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Medium black soil. (b) N.A. (iii) 1, 2.12.1954. (iv) (a) to (e) N.A. (v) As per treatments. (vi) Pb—591. (vii) Irrigated. (viii) and (ix) N.A. (x) 4 to 10.4.1955.

2. TREATMENTS :

Treatment	1	2	3	4	5	6	7	8	9	10	11	12
First year :	o	c	c	p ₁	p ₂	o	o	o	o	p ₁ ¹	p ₁	p ₂
Second year :	o	c	c	o	o	p ₁	p ₂	o	o	p ₁ ¹	p ₁	p ₂
Third year :	o	c	c	o	o	o	o	p ₁	p ₂	p ₁ ¹	p ₁	p ₂

Treatments are 3 course rotations, there being 9 distinct treatment. Plots under treatment 1 do not receive any fertilizer. Plots under other treatments receive a basal application of 20 lb./ac. of N as A/S. One of the treatments consists of the application of basal dose of N only. This treatment, denoted by c, serves as control and is applied to two plots in each block. Various symbols denote—p₁¹=10, p₁=20 and p₂=40 lb./ac. of P₂O₅.

3. DESIGN :

(i) R.B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) (a) 50'×22'. (b) 45'×16'. (v) 2½'×3'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) A mild attack of loose-smut of Wheat in almost all plots. (iii) Grain and straw yield. (iv) (a) 1953—1956. (b) As per treatments. (c) N.A. (v) (a) Obedullaganj and Reora. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 1129 lb./ac. (ii) 116.8 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of grain in lb./ac.

npk =20 lb./ac. of N as A/S+20 lb./ac. of P_2O_5 as Super+20 lb./ac. of K_2O as Mur. Pot.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogenous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crops, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied in type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

4. GENERAL :

Treatment	D_1	D_2
Av. yield	1615	1503

S.E./mean = 25.6 lb./ac.

Crop :- Wheat (*Rabi*).

Ref :- M.P. 59(50).

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'C'.

Object :—To study the effect of sowing of Wheat in different directions.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) *Morand*. (b) Refer soil analysis, Powarkheda. (iii) 2.11.1959. (iv) (a) Crossed *bakhering*. (b) Line sowing by *Nari*. (c) 80 lb./ac. (d) Between rows 12". (e) N.A. (v) Nil. (vi) H.Y.—11 (mid-late). (vii) Unirrigated. (viii) Nil. (ix) N.A. (x) 25.3.1960.

2. TREATMENTS :

Sowing in two directions : D_1 =East-West and D_2 =North-South.

3. DESIGN :

(i) R.B.D. (ii) (a) 2. (b) N.A. (iii) 6. (iv) (a) $33' \times 16\frac{1}{2}'$. (b) $31' \times 14'$. (v) $1' \times 1.25'$. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Grain and straw yield. (iv) (a) 1958—1960. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 1133 lb./ac. (ii) 46.0 lb./ac. (iii). Treatment difference is significant. (iv) Av. yield of grain in lb./ac.

Treatment	D_1	D_2
Av. yield	1133	1134

S.E./mean = 17.8 lb./ac.

Crop :- Wheat (*Rabi*).

Ref :- M.P. 58(45).

Site :- Govt. Wheat Res. Farm, Powarkheda.

Type :- 'C'.

Object :—To find out suitable spacing and seeds/hole for Wheat crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) *Morand*. (b) Refer soil analysis, Powarkheda. (iii) 15.11.1958. (iv) (a) Crossed *bakherings*. (b) Dibbling. (c) N.A. (d) and (e) As per treatments. (v) N.A. (vi) H.Y.—65 (medium). (vii) Irrigated. (viii) Nil. (ix) and (x) N.A.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 spacings between rows : $S_1=6"$, $S_2=9"$ and $S_3=12"$.

(2) 3 seeds/hole : $R_1=1$, $R_2=2$ and $R_3=3$.

Spacing between hill to hill is 4".

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) $36' \times 16\frac{1}{2}'$. (b) $26.4' \times 16\frac{1}{2}'$. (v) A guard row of 4'8" along the breadth of plot. (vi) Yes.

4. GENERAL :

(i) Good. (ii) N.A. (iii) Grain and straw yield. (iv) (a) 1958—1960. (b) No. (c) Nil. (v) to (vii) N.A.

5. RESULTS :

(i) 2336 lb./ac. (ii) 271.4 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	R_1	R_2	R_3	Mean
S_1	2377	2427	1997	2268
S_2	2359	2567	2411	2446
S_3	1938	2492	2455	2295
Mean	2225	2495	2288	2336

Object :- To find out optimum spacing and seed rate for Wheat crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) Heavy clay. (b) N.A. (iii) 17.10.1957. (iv) (a) 6 *bakherings*. (b) Drilling. (c) and (d) As per treatments. (e) N.A. (v) Nil. (vi) Ujjain no. 22 (*valgare*). (vii) Un-irrigated. (viii) Weeding. (ix) 0.72". (x) 16.3.1958.

2. TREATMENTS :

Main-plot treatments :

3 spacings between rows : S₁=9", S₂=12" and S₃=18".

Sub-plot treatments :

4 seed rates : R₁=20, R₂=25, R₃=30 and R₄=40 lb./ac.

3. DESIGN :

(i) Split-plot. (ii) (a) 3 main-plots/replication ; 4 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) N.A. (b) 48'×15'. (v) 2 feet all round the plot was left fallow. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Weight of grain. (iv) (a) 1956—contd. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 580 lb./ac. (ii) (a) 183.3 lb./ac. (b) 125.2 lb./ac. (iii) Only R effect is highly significant. (iv) Av. yield of grain in lb./ac.

	R ₁	R ₂	R ₃	R ₄	Mean
S ₁	403	376	601	663	511
S ₂	486	571	708	744	627
S ₃	495	565	648	695	601
Mean	461	504	652	701	580

S.E. of difference of two

1. S marginal means = 64.8 lb./ac.

2. R marginal means = 51.1 lb./ac.

3. R means at the same level of S = 88.3 lb./ac.

4. S means at the same level of R = 100.4 lb./ac.

Crop :- Wheat (Rabi).

Ref :- M.P. 58(39).

Site :- Govt. Exptl. Farm, Vidisha.

Type :- 'C'.

Object :- To find out the most suitable seed rate and spacing for Wheat crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Peas. (c) N.A. (ii) (a) Heavy clay. (b) N.A. (iii) 9.11.1958. (iv) 2 *bakherings*. (b) Line sowing. (c) and (d) As per treatments. (e) N.A. (v) Nil. (vi) N.P.—718. (vii) Unirrigated. (viii) N.A. (ix) 3.66°. (x) 30 and 31.3.1959.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 spacings between rows : $S_1=9''$, $S_2=12''$, and $S_3=18''$.

(2) 4 seed rates : $R_1=20$, $R_2=25$, $R_3=30$ and $R_4=40$ srs./ac.

3. DESIGN:

(i) Fact. in R.B.D. (ii) (a) 12. (b) N.A. (iii) 4. (iv) (a) $40' \times 18'$ (b) $36' \times 14'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) Germination and growth satisfactory. (ii) Nil. (iii) Height of 5 random plants/plot, germination stand count per sq. yard. Weight of grain and straw. (iv) (a) 1956—1959. (b) No. (c) N.A. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 1485 lb./ac. (ii) 155.3 lb./ac. (iii) Only R effect is significant. (iv) Av. yield of grain in lb./ac.

	R_1	R_2	R_3	R_4	Mean
S_1	1391	1474	1651	1541	1514
S_2	1567	1350	1415	1454	1447
S_3	1495	1277	1579	1627	1495
Mean	1484	1367	1549	1541	1585

S.E. of marginal mean of S = 38.8 lb./ac.

S.E. of marginal mean of R = 44.8 lb./ac.

S.E. of body of table = 77.7 lb./ac.

Object :—To study the effect of different seed rate and manurial doses on different varieties of Wheat.

1. BASAL CONDITIONS :

(i) (a) N.A. (b) Wheat. (c) 40 C.L./ac. of F.Y.M. (ii) (a) *Morand II*. (b) Refer soil analysis, Betul. (iii) 14.11.1956. (iv) (a) 4 *bakherings*. (b) N.A. (c) As per treatments. (d) and (e) N.A. (v) 40 C.L./ac. of F.Y.M. (vi) As per treatments. (vii) Irrigated. (viii) to (x) N.A.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 3 seed rates : $R_1=60$, $R_2=80$ and $R_3=100$ lb./ac.(2) 3 manurial doses : $M_1=20$ lb./ac. of N+20 lb./ac. of P_2O_5 , $M_2=2 M_1$ and $M_3=3 M_1$.(3) 3 varieties : $V_1=Hy-65$ (early), $V_2=Local banri$ and $V_3=Local pitssi$.

3. DESIGN :

- (i) 3^3 Fact. confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 2. (iv) (a) $24' \times 45'$. (b) $18' \times 39'$. (v) $3' \times 3'$. (vi) Yes.

4. GENERAL :

- (i) N.A. (ii) Severe attack of black rust on local varieties. (iii) Grain yield. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) Expt. was laid out as 3^3 confounded but has been analysed as an R.B.D. because two local varieties were totally damaged by rust, and were left out. Experiments conducted during the years 1954 and 1955 may be seen under 'CMV'.

5. RESULTS :

- (i) 2397 lb./ac. (ii) 202.1 lb./ac. (iii) Only M effect is significant. (iv) Av. yield of grain in lb./ac.

	R ₁	R ₂	R ₃	Mean
M ₁	1984	2573	2077	2211
M ₂	2387	2294	2387	2356
M ₃	2635	2790	2449	2625
Mean	2335	2552	2304	2397

S.E. of any marginal mean = 82.5 lb./ac.

S.E. of body of table = 142.9 lb./ac.

Crop :- Wheat (Rabi).

Ref :- M.P. 56(87).

Site :- Govt. Exptl. Stn., Chindwara.

Type :- 'CM'.

Object :—To find out the residual effect of pulses on the yield of Wheat crop.

1. BASAL CONDITIONS :

- (i) (a) Wheat after Pulses. (b) and (c) As per treatments. (ii) (a) *Morand II*. (b) N.A. (iii) 7.11.1956. (iv) (a) *Bakhering* and ploughing. (b) Sown by *Nari*. (c) 80 lb./ac. (d) Row to row 10". (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) N.A. (ix) 2.50". (x) 9.4.1957.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1) and (2)

(1) 4 previous pulse crops : C₁=Gram, C₂=*Masoor*, C₃=Peas and C₄=Lakh.

(2) 3 levels of P₂O₅ as Super applied to previous crops : P₀=0, P₁=20 and P₂=40 lb./ac.

Sub-plot treatments :

2 levels of N as A/S : N₀=0 and N₁=20 lb./ac.

N applied at sowing of Wheat.

3. DESIGN :

- (i) Split-plot. (ii) (a) 12 main-plots/block ; 2 sub-plots/main-plot. (b) N.A. (iii) 5. (iv) (a) N.A. (b) 1/124 ac. (v) N.A. (vi) Yes.

4. GENERAL :

- (i) Satisfactory. (ii) Rust infestation on leaves was noticed. (iii) Grain yield. (iv) (a) No. (b) and (c) Nil. (v) N.A. (vi) and (vii) Nil.

5. RESULTS :

- (i) 1499 lb./ac. (ii) (a) 292.6 lb./ac. (b) 140.7 lb./ac. (iii) Main effect of N alone is significant. (iv) Av. yield of grain in lb./ac.

Crop :- Wheat.**Ref :- M.P. 54(38).****Site :- Govt. Seed and Demons. Farm, Betul.****Type :- 'CMV'.**

Object :—To study the effect of different seed rates and manurial doses on the yield of different varieties of Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) 40 C.L./ac. of F.Y.M. (ii) (a) *Morand*—2. (b) Refer soil analysis, Betul. (iii) 2.11.1954. (iv) (a) 4 *bakherings*. (b) N.A. (c) As per treatments. (d) and (e) N.A. (v) 40 C.L./ac. of F.Y.M. (vi) As per treatments. (vii) Irrigated. (viii) N.A. (ix) 42.69". (x) 23.3.1955.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 3 varieties : V_1 = Hy—65 (early), V_2 = *Bansi* (local) and V_3 = *Pissi* (local).

(2) 3 seed rates : R_1 = 60, R_2 = 80 and R_3 = 100 lb./ac.

(3) 3 manurial doses : M_1 = 20 lb./ac. of N + 20 lb./ac. of P_2O_5 , M_2 = 2 times M_1 and M_3 = 3 times M_1 .

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 27. (b) N.A. (iii) 2. (iv) (a) 24' × 45'. (b) 18' × 39'. (v) 3' × 3'. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Yield of grain. (iv) (a) 1954—1956. (b) No. (c) Nil. (v) (a) Adhartal. (b) Nil. (vi) Nil. (vii) Expt. was laid out as 3³ confd. but has been analysed as R.B.D. because of defective randomisation.

5. RESULTS :

(i) 2679 lb./ac. (ii) 288.3 lb./ac. (iii) Main effect of M is highly significant and that of V and R are significant. (iv) Av. yield of grain in lb./ac.

	R_1	R_2	R_3	Mean	M_1	M_2	M_3

Crop :- Wheat (Rabi).

Ref :- M.P. 56(MAE).

Site :- M.A.E. Farm, Powarkheda.

Type :- 'IM'.

Object :—Type I—To find the best levels of manure and irrigation for Wheat crop.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Deep black soil. (b) Refer soil analysis, Powarkheda. (iii) 10.11.1956. (iv) to (vi) N.A. (vii) As per treatments. (viii) N.A. (ix) 2.87". (x) 1st week of April, 1957.

2. TREATMENTS

Main-plot treatments :

All combinations of (1) and (2)

(1) 3 frequencies of irrigation : F₁=2, F₂=3 and F₃=4 irrigations.

(2) 3 intensities of irrigation : I₁=2", I₂=3" and I₃=4".

Sub-plot treatments :

All combinations of (3) and (4)

(3) 3 levels of N as A/S : N₀=0, N₁=30 and N₂=60 lb./ac.

(4) 3 levels of P₂O₅ as Super : P₀=0, P₁=30 and P₂=60 lb./ac.

3. DESIGN :

(i) Split-plot. (ii) (a) 9 main-plots/replication ; 9 sub-plots/main-plot. (b) N.A. (iii) 2. (iv) (a) N.A. (b) 1/96.9 ac. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Nil. (ii) Slight infection of rust. (iii) Grain and straw yield. (iv) (a) 1956—1959. (b) No. (c) N.A. (v) (a) Bagwai, Obedullaganj, and Reora. (b) N.A. (vi) Damage by hail storm. (vii) Nil.

5. RESULTS :

(i) 1463 lb./ac. (ii) (a) 270.1 lb./ac. (b) 166.2 lb./ac. (iii) Main effects of N and P and interactions N×P and F×P are highly significant. Main effect of F and interactions F×N and F×N×P are significant. (iv) Av. yield of grain in lb./ac.

	I ₁	I ₂	I ₃	F ₁	F ₂	F ₃	N ₀	N ₁	N ₂	Mean
P ₀	989	965	1049	1038	1012	953	755	1089	1160	1001

Site :- M.A.E. Farm, Obedullaganj.

Type :- 'IM'.

Object :—Type VII—To find the best levels of manure and irrigation for Wheat.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Deep black cotton soil. (b) Refer soil analysis, Obedullaganj. (iii) to (vi) N.A. (vii) As per treatments. (viii) to (x) N.A.

2. TREATMENTS to 4. GENERAL :

Same as in expt. no. 54(TCM) conducted at Obedullaganj on page 352.

5. RESULTS :

(i) 1057 lb./ac. (ii) 276.8 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	N ₀	N ₁	N ₂	Mean	I ₀	I ₁	I ₂
P ₀	910	842	1398	1050	832	1043	1275
P ₁	914	1074	769	919	791	1032	934

Crop :- Jowar (Kharif).**Ref :- M.P. 54(26).****Site :- Central Res. Farm, Gwalior.****Type :- 'M'.**

Object :—To find out suitable dose of N and P for Jowar.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) and (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 26.7.1954. (iv) (a) N.A. (b) Drilling. (c) N.A. (d) 18" between rows. (e) N.A. (v) Nil. (vi) Gwalior 12—2. (vii) Unirrigated. (viii) N.A. (ix) 28.4. (x) N.A.

2. TREATMENTS :

Strips in one direction :

5 levels of N as A/S : $N_0=0$, $N_1=10$, $N_2=20$, $N_3=30$ and $N_4=40$ lb./ac.

Strips in orthogonal direction :

3 levels of P_2O_5 as Super : $P_0=0$, $P_1=20$ and $P_2=40$ lb./ac.

A/S applied 3 weeks after sowing and Super applied before sowing.

3. DESIGN :

(i) Strip-plot. (ii) (a) 15. (b) N.A. (iii) 4. (iv) (a) $34' \times 15'$. (b) $30' \times 12'$. (v) $2' \times 1\frac{1}{2}'$. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Yield of grain and straw. (iv) (a) 1952—N.A. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 707 lb./ac. (ii) S.E. (N) = 176.4 lb./ac., S.E. (P) = 259.3 lb./ac. and S.E. (NP) = 137.0 lb./ac.

(iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	N_0	N_1	N_2	N_3	N_4	Mean
P_0	688	821	782	762	836	778
P_1	661	692	677	704	739	694
P_2	556	537	642	755	751	648
Mean	635	683	700	740	775	707

S.E. of difference of two

1. Marginal means of N = 72.0 lb./ac.
2. Marginal means of P = 82.0 lb./ac.
3. P means at the same level of N = 132.1 lb./ac.
4. N means at the same level of P = 103.0 lb./ac.

Crop :- Jowar (*Kharif*).

Ref :- M.P. 54(31).

Site :- Agri. College Farm, Gwalior.

Type :- 'M'.

Object :—To determine the optimum dose of micronutrients on Jowar.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 16.7.1954. (iv) (a) Ploughing, discing and *patela*. (b) N.A. (c) 4 srs./ac. (d) 9" between rows. (e) N.A. (v) N.A. (vi) Gwalior 12—2. (vii) N.A. (viii) Weeding and interculturaling. (ix) 28.4". (x) 28.11.1954.

2. TREATMENTS :

7 micronutrients : M_0 =Control, $M_1=8$, $M_2=16$, $M_3=32$ oz./ac. of Borax, $M_4=6$, $M_5=12$ and $M_6=24$ oz./ac. of C/S.

3. DESIGN :

(i) R.B.D. (ii) (a) 7. (b) N.A. (iii) 4. (iv) (a) $50' \times 12'$. (b) $44' \times 9'$. (v) $3' \times 1\frac{1}{2}'$. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Grain and straw yield. (iv) (a) and (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

Crop :- Jowar (*Kharif*).**Ref :- M.P. 56(MAE).****Site :- M.A.E. Farm, Ujjain.****Type :- 'M'.**

Object :—Type V—To study the effect of sources and time of application of N on Jowar.

1. BASAL CONDITIONS :

(i) (a) Cotton—Jowar—Fallow—Wheat. (b) and (c) N.A. (ii) (a) Medium black soil, clay loam in texture. (b) N.A. (iii) Third week of July, 1956. (iv) (a) and (b) N.A. (c) 5 lb./ac. (d) 18". (e) N.A. (v) Nil. (vi) Ujjain no. 6 (late). (vii) Unirrigated. (viii) and (ix) N.A. (x) First week of December, 1956.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 3 sources of N : S₁=A/S, S₂=A/N and S₃=Urea.(2) 2 levels of N : N₁=20 and N₂=40 lb./ac.(3) 3 times of application of N : T₁=At sowing, T₂=At first interculture and T₃=½ at sowing+½ at first interculture.**3. DESIGN :**

(i) 3²×2 fact. confd. (ii) (a) 3 blocks/replication ; 6 plots/block. (b) N.A. (iii) 4. (iv) (a) N.A. (b) 29'×15'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Poor. (ii) Stem-borer attack. (iii) Grain yield. (iv) (a) 1956—contd. (b) Yes. (c) N.A. (v) (a) and (b) N.A. (vi) Nil. (vii) S×T table means and the corresponding S.E. are unadjusted.

5. RESULTS :

(i) 1572 lb./ac. (ii) 228.5 lb./ac. (iii) Main effects of T and N are highly significant. (iv) Av. yield of grain in lb./ac.

	T ₁	T ₂	T ₃	Mean	S ₁	S ₂	S ₃

2. TREATMENTS :

Treatment	1	2	3	4	5	6	7	8	9	10	11	12
1st year	O	C	C	p ₁	p ₂	C	C	C	C	p _{1/2}	p ₁	p ₂
2nd year	O	C	C	C	C	p ₁	p ₂	C	C	p _{1/2}	p ₁	p ₂
3rd year	O	C	C	C	C	C	C	p ₁	p ₂	p _{1/2}	p ₁	p ₂

Treatments are three-year course rotation with 11 distinct treatments. Plots under one treatment do not receive any fertilizer. Plots under the other ten treatments receive a basal application of N. One of the ten treatments consists of the application of basal dose of N only. This treatment which serves as control is applied to two plots in each block.

Various rotations are : O=Control, C=20 lb./ac. of N ; p_{1/2}=10 lb./ac. of P₂O₅ ; p₁=20 lb./ac. of P₂O₅ ; p₂=40 lb./ac. of P₂O₅.

S ₂	1173	1087	1394	1218
S ₃	950	809	774	844
Mean	899	972	1115	995

S.E. of any marginal mean = 107.0 lb./ac.

S.E. of body of table = 185.3 lb./ac.

Crop :- Jowar (*Kharif*).

Ref :- M.P. 54(124).

Site :- Instt. of Plant Industry, Indore.

Type :- 'CM'.

Object :- To study the effect of different times of sowing and different plant spacings with different sources of N on the yield of Jowar.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Cotton. (c) Nil. (ii) (a) Black cotton soil. (b) Refer soil analysis, Indore. (iii) 18.6.1954 and 4.7.1954. (iv) (a) 1 *bakhering*. (b) Drilling. (c) 10 lb./ac. (d) 14" between rows (e) N.A. (v) Nil. (vi) I.P.I.—3. (vii) Unirrigated. (viii) 1 weeding and 1 interculture. (ix) 52.2" (x) 20.12.1954 to 3.11.1955.

2. TREATMENTS :

Main-plot treatments :

2 sowing times : D₁=Pre-monsoon and D₂=At monsoon break.

Sub-plot treatments :

All combinations of (1) and (2)

(1) 2 plant spacings : S₁=9" and S₂=18".

(2) 4 sources of N : N₀=0, N₁=10 lb./ac. of N as A/S, N₂=20 lb./ac. of N as A/S and G.N.C. in 3 : 1 ratio, N₃=20 lb./ac. of N as A/S and G.N.C. in 1 : 1 ratio.

3. DESIGN :

(i) Split-plot. (ii) (a) 2 main-plots/replication ; 8 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) 45'×11'. (b) 40'×9½'. (v) 2½'×10". (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) Grain yield. (iv) (a) 1952—1955. (b) No. (c) Nil. (v) N.A. (vi) Heavy rains in September. (vii) Nil.

5. RESULTS :

(i) 373 lb./ac. (ii) (a) 192.7 lb./ac. (b) 104.7 lb./ac. (iii) None of the effects is significant. (iv) Av. yield grain in lb./ac.

	N ₀	N ₁	N ₂	N ₃	Mean	S ₁	S ₂
D ₁	361	430	398	381	392	411	374

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogenous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crops, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied in type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

Site :- Govt. Exptl. Stn., Chhindwara.

Type :- 'D'.

Object :—To find out the effect of insecticides on the yield of Potato.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) N.A. (c) Nil. (ii) (a) Medium sandy. (b) Refer soil analysis, Chhindwara. (iii) 23.11.1959. (iv) (a) 1 ploughing. and 2 *bakherings*. (b) Planting. (c) 21 mds./ac. (d) 12'×6". (e) 1. (v) 48 lb./ac. of N+48 lb./ac. of P₂O₅. (vi) *Kufri*. (vii) Irrigated. (viii) 3 weedings. (ix) 4.7". (x) 29.4.1960.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 58(56) on page 404.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Potato yield. (iv) 1958—contd. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 2380 lb./ac. (ii) 717.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of tuber in lb./ac.

Treatment	T ₀	T ₁	T ₂	T ₃
Av. yield	2147	2178	2396	2800

S.E./mean = 358.8 lb./ac.

Crop :- Potato (*Rabi*).

Ref :- M.P. 59(108).

Site :- Govt. Exptl. Stn., Chhindwara.

Type :- 'D'.

Object :—To find out the effect of insecticides on the yield of Potato.

1. BASAL CONDITIONS :

(i) Nil. (b) *Sannhemp*. (c) N.A. (ii) (a) *Sehra*. (b) Refer soil analysis, Chhindwara. (iii) 29.10.1959. (iv) (a) 1 ploughing and 2 *bakherings*. (c) 10 mds./ac. (d) 12'×6". (e) 1. (v) 52 lb./ac. of N+52 lb./ac. of P₂O₅. (vi) *Kufri*. (vii) Irrigated. (viii) 3 weedings and earthing. (ix) Nil. (x) 11.4.1960.

2. TREATMENTS :

All combinations of (1) and (2)

- (1) 4 different fungicides : T₀=Control, T₁=Spray with cupravait 3 lbs. in 100 gallons, T₂=Spray with Bord. mixture 2 : 2 : 50, T₃=Diathane 2078 at 3 lbs. in 100 gallons.
(2) Two intervals of application of Fungicides : D₁=15 days and D₂=30 days after spray.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 8. (b) N.A. (iii) 4. (iv) (a) and (b) 28'×12'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Potato yield. (iv) (a) 1959—contd. (b) No. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 6758 lb./ac. (ii) 1475 lb./ac. (iii) None of the effects is significant (iv) Av. yield of tuber in lb./ac.

	T ₀	T ₁	T ₂	T ₃	Mean
D ₁	6133	6400	6400	7200	6533
D ₂	5733	6733	7867	7600	6983
Mean	5933	6567	7134	7400	6758

S.E. of marginal mean of T = 521 lb./ac.
S.E. of marginal mean of D = 369 lb./ac.
S.E. of body of table = 738 lb./ac.

Crop :- Gram.**Ref :- M.P. 54(45).****Site :- Govt. Agri. Res. Stn., Adhartal (Jabalpur).****Type :- 'M'.**

Object :- To see the effect of different doses of Super on Gram and to study its residual effect on the yield of Wheat.

1. BASAL CONDITIONS :

(i) (a) Gram—Wheat—Gram. (b) Wheat. (c) Nill (ii) (a) *Kabar*—2. (b) N.A. (iii) 5.11.1954. (iv) (a) *Bakhering*. (b) Drilling. (c) 60 lb./ac. (d) and (e) N.A. (v) Nil. (vi) Ad—5. (vii) Unirrigated. (viii) Kans cutting and weeding. (ix) 4.59". (x) 23, 24.3.1955.

2. TREATMENTS :

5 doses of P_2O_5 as Super : $P_0=0$, $P_1=15$, $P_2=20$, $P_3=25$ and $P_4=30$ lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) (a) 4. (b) $66' \times 16\frac{1}{2}'$. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) N.A. (iii) Yield of grain. (iv) (a) 1950—1955. (b) No. (c) N.A. (v) to (vii) N.A.

5. RESULTS :

(i) 476 lb./ac. (ii) 44.1 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P_0	P_1	P_2	P_3	P_4
Av. yield	442	431	486	495	525

S.E./mean = 22.1 lb./ac.

Crop :- Gram.**Ref :- M.P. 55(42).****Site :- Govt. Agri. Res. Stn., Adhartal (Jabalpur).****Type :- 'M'.**

Object :—To ascertain the effect of different doses of Super on Gram and to see its residual effect on Wheat.

1. BASAL CONDITIONS :

{(i) (a) Gram—Wheat—Gram. (b) and (c) N.A. (ii) (a) *Kabar* II. (b) N.A. (iii) 9.11.1955. (iv) (a) N.A. {b) Seeds drilled. (c) 60 lb./ac. (d) and (e) N.A. (v) Nil. (vi) Ad—5. (vii) Unirrigated. (viii) N.A. {ix) 64.66". (x) 24.3.1956.

2. TREATMENTS :

5 doses of P_2O_5 as Super : $P_0=0$, $P_1=15$, $P_2=30$, $P_3=45$ and $P_4=60$ lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 5. (b) N.A. (iii) 4. (iv) (a) and (b) $66' \times 16\frac{1}{2}'$. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Not satisfactory. (ii) Nil. (iii) Yield of grain. (iv) (a) 1950—1955. (b) No. (c) N.A. (v) to (vii) N.A.

5. RESULTS :

(i) 244 lb./ac. (ii) 69.6 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P_0	P_1	P_2	P_3	P_4
Av. yield	248	221	236	275	241

S.E./mean = 34.8 lb./ac.

Crop :- Gram (Rabi).**Ref :- M.P. 59(3).****Site :- Govt. Agri. Res. Stn., Adhartal (Jabalpur).****Type :- 'M'.**

Object :—To study the effect of different manurial doses on Gram crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) 10 lb./ac. of N as A/S+10 lb./ac. of P_2O_5 as Super. (ii) (a) *Kabar II*. (b) N.A. (iii) 6.11.1959. (iv) (a) *Bakhering* and Raja cutting. (b) Drilled with country *nari*. (c) 60 lb./ac. (d) Rows 12" apart. (e) N.A. (v) T.C at $9\frac{1}{2}$ C.L./ac. broadcasted. (vi) N.A. (vii) Unirrigated. (viii) Nil. (ix) 60°. (x) 13.4.1960.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 levels of P_2O_5 as Super : $P_0=0$, $P_1=7.5$ and $P_2=15$ lb./ac.(2) 2 levels of N as A/S : $N_0=0$ and $N_1=10$ lb./ac.

Manures drilled with seed on 6.11.1959.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 6. (b) N.A. (iii) 6. (iv) (a) $36' 3'' \times 15'$. (b) $33' 5'' \times 13'$. (v) $15'' \times 1'$. (vi) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Grain and straw yield. (iv) (a) to (c) N.A. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 554 lb/ac. (ii) 124.9 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	P_0	P_1	P_2	Mean
N_0	519	495	546	520
N_1	509	654	601	588

Crop :- Gram.

Ref :- M.P. 57(SFT).

Centre :- Indore (c.f.).

Type :- 'M'.

Object:—Type C—To compare the responses of leguminous crops to alternative sources and levels of phosphate

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Medium black soil. (iii) Nil. (iv) and (v) N.A. (vi) October 1957. (vii) to (ix) Nil. (x) March 1958.

2. TREATMENTS :

0 = Control (no manure).

p₁ = 30 lb./ac. of P₂O₅ as Super.

p₂ = 60 lb./ac. of P₂O₅ as Super.

p₁' = 30 lb./ac. of P₂O₅ as Dicalcium phosphate.

p₂' = 60 lb./ac. of P₂O₅ as Dicalcium phosphate.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone in the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crops, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on types C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Grain yield. (iv) (a) No. (b) —. (v) As per design. (vi) and (vii) Nil.

5. RESULTS :

Treatment	0	P ₁	P ₂	P ₁ '	P ₂ '
Av. yield	247	354	403	428	403

G.M. = 367 lb./ac. S.E. = 46.0 lb./ac. and no. of trials = 7.

Site :- Central Res. Farm, Gwalior.

Type :- 'M'.

Object :—To find out suitable manurial schedule for Moong.

1. BASAL CONDITIONS:

(i) (a) Nil. (b) Gram. (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 28.7.1957. (iv) (a) 2 ploughings. (b) Drilling. (c) 4 srs./ac. (d) Row to row 18". (e) N.A. (v) Nil. (vi) K—11. (vii) Unirrigated. (viii) 2 weedings. (ix) 57.7". (x) 21.10.1957.

2. TREATMENTS:

All combinations of (1), (2) and (3)

(1) 3 levels of N : $N_0=0$, $N_1=20$ and $N_2=40$ lb./ac.

(2) 3 levels of P_2O_5 : $P_0=0$, $P_1=30$ and $P_2=60$ lb./ac.

(3) 3 levels of K_2O : $K_0=0$, $K_1=20$ and $K_2=40$ lb./ac.

3. DESIGN:

(i) 3³ confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 2. (iv) (a) $17' \times 44'$. (b) $14' \times 40'$. (v) $1\frac{1}{2}' \times 2'$. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Grain yield. (iv) (a) No. (b) and (c) —. (v) to (vii) Nil.

5. RESULTS :

(i) 586 lb./ac. (ii) 119.7 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	P ₀	P ₁	P ₂	Mean	K ₀	K ₁	K ₂
N ₀	560	613	568	580	605	584	552
N ₁	528	622	649	600	682	534	583
N ₂	557	536	641	578	538	570	626
Mean	548	590	619	586	608	563	587
K ₀	583	604	638				
K ₁	495	549	644				
K ₂	567	617	576				

S.E. of any marginal mean = 28.2 lb./ac.

S.E. of body of any table = 48.9 lb./ac.

Crop :- Moong (*Kharif*).**Ref :- M.P. 58(24).****Site :- Govt. Agri. Res. Stn., Jhabua.****Type :- 'C'.**

Object :—To find out the optimum seed rate for Moong under local conditions.

1. BASAL CONDITIONS :

(i) to (v) N.A. (vi) Krishan—II. (vii) to (x) N.A.

2. TREATMENTS :

4 seed rates : R₁=3, R₂=5, R₃=7 and R₄=9 srs./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) N.A. (iii) 4. (iv) (a) N.A. (b) 27'×18'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Grain yield. (iv) to (vii) N.A.

5. RESULTS :

(i) 487 lb./ac. (ii) 91.4 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	R ₁	R ₂	R ₃	R ₄
Av. yield	336	493	549	571

S.E./mean = 45.7 lb./ac.

Crop :- Masoor (*Rabi*).**Ref :- M.P. 54(75).****Site :- Govt. Soil Cons. Res. Stn., Phanda.****Type :- 'C'.**

Object :—To find out suitable seed rate for Masoor.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) *Jowar*. (c) N.A. (ii) (a) Black cotton soil. (b) N.A. (iii) 3.11.1954. (iv) (a) 5 *bakherings*. (b) Drilling. (c) As per treatments. (d) and (e) N.A. (v) N.A. (vi) *Desi*. (vii) Unirrigated. (viii) Roguing. (ix) N.A. (x) 17, 18.2.1955.

2. TREATMENTS :

3 seed rates : $R_1=20$, $R_2=40$ and $R_3=80$ srs/ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) $37' \times 78'$. (iii) 4. (iv) (a) $37' \times 26'$. (b) $33' \times 22'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) N.A. (ii) Mild attack of wilt disease. (iii) Plant height, no. of branches, yield of grain and straw. (iv) (a) 1954—1955. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 605 lb./ac. (ii) 23.1 lb./ac. (iii) R effect is highly significant. (iv) Av. yield of grain in lb./ac.

Treatment	R_1	R_2	R_3
Av. yield	698	569	547

S.E./mean = 11.5 lb./ac.

Crop :- Masoor (Rabi).

Ref :- M.P. 55(79).

Site :- Govt. Soil Cons. Res. Stn., Phanda.

Type :- 'C'.

Object :—To find out optimum seed rate for Masoor.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Black cotton soil. (b) N.A. (iii) 11.11.1955. (iv) (a) and (b) N.A. (c) As per treatments. (d) and (e) N.A. (v) and (vi) N.A. (vii) Unirrigated. (viii) N.A. (ix) 0.70". (x) 27.2.1956.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54(75) on page 436.

4. GENERAL :

(i) and (ii) N.A. (iii) Plant height and grain yield. (iv) (a) 1954—1955. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 549 lb./ac. (ii) 98.0 lb./ac. (iii) Treatments are not significantly different. (iv) Av. yield of grain in lb./ac.

Treatment	R_1	R_2	R_3
Av. yield	500	581	567

S.E./mean = 49.0 lb./ac.

Crop :- Masoor (Rabi).

Ref :- M.P. 54(73).

Site :- Govt. Soil Cons. Res. Stn., Phanda.

Type :- 'C'.

Object :—To find out optimum spacing for Masoor.

1. BASAL CONDITIONS :

(i) (a) N.A. (b) *Sannhemp*. (c) N.A. (ii) (a) Malwa black cotton soil. (b) N.A. (iii) 11, 12.11.1954. (iv) (a) *Bakhering* in May and July. G.M. with *Sannhemp* in Sept. 3 *bakherings* in Sept. and Oct. (b) Dibbling. (c) N.A. (d) As per treatments. (e) N.A. (v) G.M. with *sannhemp*. (vi) *Desi*. (vii) Unirrigated. (viii) Roging. (ix) N.A. (x) 19.3.1955.

2. TREATMENTS :

3 spacings: $S_1=4'' \times 8''$, $S_2=2'' \times 4''$ and $S_3=8'' \times 16''$.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) $24' \times 45'$. (iii) 4. (iv) (a) $24' \times 15'$. (b) $20' \times 11'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) N.A. (ii) Mild attack of wilt disease. (iii) Plant height, no. of branches and grain yield. (iv) (a) 1954—1955. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 290 lb./ac. (ii) 30.1 lb./ac. (iii) Treatments are highly significantly different. (iv) Av. yield of grain in lb./ac.

Treatment	S ₁	S ₂	S ₃
Av. yield	318	342	210

S.E./mean = 15.1 lb./ac.

Crop :- Masoor (Rabi).

Ref :- M.P. 55(77).

Site :- Govt. Soil Cons. Res. Stn., Phanda.

Type :- 'C'.

Object :—To find out optimum spacing for Masoor.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Black cotton soil. (b) N.A. (iii) 22.11.1955. (iv) (a) to (c) N.A. (d) As per treatments. (e) N.A. (v) and (vi) N.A. (vii) Unirrigated. (viii) N.A. (ix) 0.70°. (x) 25.3.1956.

2. TREATMENTS :

3 spacings : S₁=4"×8", S₂=2"×4" and S₃=8"×16".

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) 49'×19'. (iii) 4. (iv) (a) 19'×15'. (b) 15'×11'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Plant height and grain yield. (iv) (a) 1954—1955. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 345 lb./ac. (ii) 63.5 lb./ac. (iii) Treatments are highly significantly different. (iv) Av. yield of grain in lb./ac.

Treatment	S ₁	S ₂	S ₃
Av. yield	390	441	204

S.E./mean = 31.8 lb./ac.

Crop :- Arhar.

Ref :- M.P. 54(27).

Site :- Centre Res. Farm, Gwalior.

Type :- 'C'.

Object :—To find out suitable seed rate and spacing for Arhar.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Sandy loam. (b) N.A. (iii) 29.7.1954. (iv) (a) N.A. (b) Drilling. (c) and (d) As per treatments. (e) N.A. (v) N.A. (vi) Gwalior—3. (vii) and (viii) N.A. (ix) 28.44°. (x) N.A.

2. TREATMENTS :

Main-plot treatments :

3 rows spacings : S₁=18", S₂=24" and S₃=30".

Sub-plot treatments :

3 seeds rates : R₁=10, R₂=15 and R₃=20 lb./ac.

3. DESIGN :

(i) Split-plot. (ii) (a) 3 main-plots/replication ; 3 sub-plots/main-plot. (b) N.A. (iii) 6. (iv) (a) S₁=33'×33', S₂=33'×34' and S₃=33'×35'. (b) 30'×30'. (v) One row on both sides and 1½' at both ends. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Yield of grain and straw. (iv) (a) 1952—1954. (b) N.A. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 430 lb./ac. (ii) (a) 120.2 lb./ac. (b) 119.7 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of grain in lb./ac.

	R ₁	R ₂	R ₃	Mean
S ₁	354	458	418	410
S ₂	384	492	511	462
S ₃	477	448	326	417
Mean	405	466	418	430

S.E. of difference of two

1. S marginal means = 40.1 lb./ac.
2. R marginal means = 39.9 lb./ac.
3. R means at the same level of S = 69.1 lb./ac.
4. S means at the same level of R = 69.2 lb./ac.

Crop :- Gram, Teoda, Masoor and Peas (Rabi).

Ref :- M.P. 54(36).

Site :- Govt. Seed and Demons. Farm, Betul.

Type :- 'X'.

Object :—To study the effect of P on different legumes and its residual effect on the succeeding Wheat crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) *Morand II*. (b) Refer soil analysis, Betul. (iii) 26.10.1954. (iv) (a) 4 *bakherings*. (b) to (e) N.A. (v) As per treatments. (vi) N.A. (vii) Unirrigated. (viii) N.A. (ix) 42.69%. (x) 12.2.1955.

2. TREATMENTS :

3 levels of P₂O₅ as Super : P₀=0, P₁=20 and P₂=40 lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) N.A. (iii) 5. (iv) (a) 24'×45'. (b) 18'×39'. (v) 3'×3'. (vi) Yes.

4. GENERAL :

(i) to (ii) N.A. (iii) Yield of grain. (iv) (a) 1955—N.A. (b) Yes. (c) Nil. (v) (a) and (b) Nil. (vi) Nil. (vii) Separate analysis was done for each crop and results presented accordingly. Residual effects on wheat not studied.

5. RESULTS :

	Av. yield in lb./ac.			Mean	Significance	S.E./plot in lb./ac.	S.E./mean in lb./ac.
	P ₀	P ₁	P ₂				
Gram	1637	1463	1339	1480	Not significant	212.7	94.9
Teoda	818	930	868	872	Not significant	221.3	99.2
Masoor	1600	1699	1736	1678	Not significant	158.7	68.2
Peas	1265	1004	1302	1190	Highly significant	121.5	51.5

Crop :- Masoor, Gram, Peas and Lakh.**Ref :- M.P. 54(37).****Site :- Govt. Seed and Demons. Farm, Damoh.****Type :- 'X'.**

Object :—To study the effect of P on different legumes and its residual effect on the succeeding Wheat crop.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) Nil. (ii) (a) *Kabar*. (b) N.A. (iii) 17 and 18.11.1954. (iv) (a) 3 *bakherings*. (b) to (e) N.A. (v) Nil. (vi) Masoor and *lakh* local; peas NP—29 and gram N.A. (vii) Unirrigated. (viii) Nil. (ix) 3.68". (x) 7 and 25.3.1960.

2. TREATMENTS and 3. DESIGN :

Same as in expt. no. 54(36) on page 439.

4. GENERAL :

(i) Nil. (ii) N.A. (iii) Yield of grain. (iv) (a) 1954—contd. (b) 1954—1956. (c) N.A. (v) (a) Betul. (b) N.A. (vi) Nil. (vii) Residual effect on wheat was not studied.

5. RESULTS :

	Av. yield in lb./ac.			Mean	Significance	S.E./plot in lb./ac.	S.E./mean in lb./ac.
	P ₀	P ₁	P ₂				
Gram	475	625	580	560	Not significant	127.0	56.8

5. RESULTS :**Crop : Gram**

(i) 699 lb./ac. (ii) 145.2 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P ₀	P ₁	P ₂
Av. yield	697	775	625

S.E./mean = 64.9 lb./ac.

Crop : Teora

(i) 889 lb./ac. (ii) 163.1 lb./ac. (iii) Treatment differences are significant. (iv) Av. yield of grain in lb./ac.

Treatment	P ₀	P ₁	P ₂
Av. yield	1054	883	730

S.E./mean = 72.9 lb./ac.

Crop : Masoor

(i) 331 lb./ac. (ii) 119.3 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P ₀	P ₁	P ₂
Av. yield	305	334	355

S.E./mean = 53.3 lb./ac.

Crop : Peas

(i) 346 lb./ac. (ii) 165.9 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P ₀	P ₁	P ₂
Av. yield	301	409	329

S.E./mean = 74.2 lb./ac.

Crop :- Pulses (Rabi).

Ref :- M.P. 56(86).

Site :- Govt. Exptl. Stn., Chhindwara.

Type :- 'M'.

Object :—To study the effect of P on different pulse crops and to see its residual effect on Wheat.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) *Morand*. (b) Refer soil analysis, Chhindwara. (iii) 16.11.1956. (iv) (a) *Bakhering* and ploughing. (b) N.A. (c) Gram, *masoor* and *lakh* : 60 lb./ac; *peas* : 80 lb./ac. (d) 10' between rows. (e) N.A. (v) Nil. (vi) Local. (vii) and (viii) N.A. (ix) 2.50°. (x) 8.3.1957.

2. TREATMENTS :

3 levels of P₂O₅ as Super : P₀=0, P₁=20 and P₂=40 lb./ac. applied to each of the following crops :
(a) Gram, (b) *Masoor*, (c) *Peas* and (d) *Lakh*.

3. DESIGN :

(i) R.B.D. (ii) (a) 12 (3 for each crop). (b) N.A. (iii) 4. (iv) (a) 21'×52'. (b) 15'×46'. (v) 3'×3'. (vi) Yes.

4. GENERAL :

(i) *Masoor*, *lakh* and *peas* dried up prematurely due to cold wave. (ii) Aphids were noticed on peas and *lakh* plots. (iii) Yield of grain. (iv) (a) 1956 only. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) *Masoor* and *lakh* crops failed completely.

5. RESULTS :

Crop : Gram

(i) 2020 lb./ac. (ii) 195.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P ₀	P ₁	P ₂
Av. yield	1844	2006	2211

S.E./mean = 97.7 lb./ac.

Crop : Peas

(i) 759 lb./ac. (ii) 109.4 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of grain in lb./ac.

Treatment	P ₀	P ₁	P ₂
Av. yield	677	873	817

S.E./mean = 54.8 lb./ac.

Crop :- Sugarcane.**Ref :- M.P. 56(32).****Site :- R.A.K. Agri. Res. Instt., Sehore.****Type :- 'M'.****Object :-**To study the effect of different doses and times of application of K on Sugarcane.**1. BASAL CONDITIONS :**

5. RESULTS :

(i) 400 lb./ac. (ii) 72.9 lb./ac. (iii) None of the effects is significant. (iv) Av. yield of *kapas* in lb./ac.

Treatment	0	c	p _{1/2}	p ₁	p ₂
Av. yield	304	403	436	379	444

S.E./mean 0, p_{1/2} = 51.5 lb./ac. S.E./mean p₁, p₂ = 36.4 lb./ac. S.E./mean for c = 21.0 lb./ac.

Crop :- Cotton.**Ref :- M.P. 57(SFT).****Centre :- Indore (c.f.).****Type :- 'M'.**

Object :—Type B—To investigate the relative efficiency of different nitrogenous fertilizers at different doses.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) Medium black soil. (iii) Nil. (iv) and (v) N.A. (vi) June—July 1957. (vii) Unirrigated. (viii) and (ix) N.A. (x) November 1957.

2. TREATMENTS :

0 = Control (no manure).
 n₁ = 20 lb./ac. of N as A/S.
 n₂ = 40 lb./ac. of N as A/S.
 n₁' = 20 lb./ac. of N as Urea.
 n₂' = 40 lb./ac. of N as Urea.
 n₁'' = 20 lb./ac. of N as A/S/N.
 n₂'' = 40 lb./ac. of N as A/S/N.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogenous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crops, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half

of type B on crops other than the legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

4. GENERAL :

(i) Normal. (ii) Nil. (iii) Cotton yield. (iv) (a) No. (b) and (c) N.A. (v) As per design. (vi) and (vii) Nil.

2. TREATMENTS :

All combinations of (1), (2) and (3)

(1) 3 spacings : $S_1 = 2\frac{1}{2}' \times 2'$, $S_2 = 2\frac{1}{2}' \times 2\frac{1}{2}'$ and $S_3 = 2\frac{1}{2}' \times 3'$.

(2) 3 dates of sowing : $D_1 = 15.5.1954$, $D_2 = 31.5.1954$ and $D_3 = 23.6.1954$.

(3) 3 levels of irrigation : I_0 = No irrigation, I_1 = 1 irrigation in the middle of October 1954 and $I_2 = I_1$ + one irrigation in the middle of November 1954

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 1. (iv) (a) 1/19.4 ac. (b) 1/96.4 ac. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Yield of cotton. (iv) (a) 1954—1956. (b) Yes. (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) The expt. was supposed to be laid out in 3^3 confd. design. But due to incorrect allotment of treatments to different blocks, it is analysed as fact. in R.B.D.

5. RESULTS :

(i) 880 lb./ac. (ii) 79.8 lb./ac. (iii) Main effect of D and $I \times S$ interaction are highly significant while main effect of S and $D \times I$ interaction are significant. (iv) Av. yield of *kapas* in lb./ac.

	D_1	D_2	D_3	Mean	I_0	I_1	I_2

Crop :- Cotton (Kharif).

Ref :- M.P. 55(61).

Site :- Govt. Res. Farm, Khandwa.

Type :- 'CMVI'.

Object :—To study the effect of varieties manurial doses sowing period and irrigation and spacing on the yield of Cotton.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Cotton. (c) N.A. (ii) (a) *Morand*. (b) Refer soil analysis, Khandwa. (iii) As per treatments. (iv) (a) 3 *bakherings* one ploughing. (b) and (c) N.A. (d) As per treatments. (e) N.A. (v) Nil. (vi) and (vii) As per treatments. (viii) 5 hoeings and 2 weedings. (ix) N.A. (x) 4 pickings on 24.10.1955, 11.11.1955, 15.12. 955 and 24.1.1956.

2. TREATMENTS :

Main-plot treatments :

All combinations of (1), (2) and (3)

- (1) 2 irrigations : I₀=No irrigation and I₁=Post monsoon irrigation.
- (2) 2 sowing dates : D₁=Pre monsoon sowing on 4, 5.6.1955 and D₂=Normal sowing on 4, 5.7.1955.
- (3) 3 levels of N as A/S : N₀=0, N₁=40 and N₂=80 lb./ac.

Sub-plot treatments :

2 varieties : V₁=H 420 (*desi*) and V₂=0394 American.

Sub-Sub-plot treatments :

3 spacings for H 420 : S₁=18"×9", S₂=18"×18", S₃=27"×18" and Spacing for 0394 : S₁=2'×1', S₂=2'×2' and S₃=2'×3'.

3. DESIGN :

(i) Split-plot. (ii) (a) 12 main-plots/replication ; 3 sub-plots/main-plot ; 2 sub-sub-plots/sub-plot. (b) N.A. (iii) 2. (iv) (a) 36'×18'. (b) N.A. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) Nil. (iii) Yield of cotton. (iv) (a) to (c) N.A. (v) to (vii) Nil.

5. RESULTS :

(i) to (iv) Av. yield of cotton in lb./ac.

 n_2' = 40 lb./ac. of N as Urea.

3. DESIGN :

(i) and (ii) The district has been divided into four agriculturally homogeneous zones and one field assistant has been posted in each zone. The field assistant conducts the trials in one revenue circle or thana in the zone and the circle/thana is changed once in two years within the same zone. Each field assistant is required to conduct 31 trials in a year, 8 on a *kharif* cereal, 8 on a *rabi* cereal, 8 on cash crops, 4 on an oilseed crop and 3 on a leguminous crop. Half the number of trials conducted are of type A and the other half of type B on crops other than legumes. The three trials on legumes are of type C. Residual effects of phosphate application are studied on type C trials in two out of the four zones in each district every year. The above experiments are laid out in randomly located fields in randomly selected villages in each of the 4 zones at the rate of one experiment per village. (iii) (a) N.A. (b) 1/80 ac. (iv) Yes.

Crop :- Groundnut (*Kharif*).

Ref :- M.P. 58(35).

Site :- Govt. Exptl. Farm, Vidisha.

Type :- 'C'.

Object :—To find out most suitable spacing and seed rate for Groundnut.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) *Jowar*. (c) N.A. (ii) (a) Heavy clay. (b) N.A. (iii) 20.7.1958. (iv) (a) 2 *bakherings*. (b) Line sowing. (c) and (d) As per treatments. (e) N.A. (v) Nil. (vi) A. K. 12—24. (vii) Unirrigated. (viii) Weeding and earthing. (ix) 49.98". (x) 2.11.1958.

2. TREATMENTS :

Main-plot treatments :

3 row spacings : S₁=18", S₂=24" and S₃=30".

Sub-plot treatments :

4 seed rates : R₁=25, R₂=30, R₃=35 and R₄=40 srs./ac.

3. DESIGN :

(i) Split-plot. (ii) (a) 3 main-plots/replication ; 4 sub-plots/main-plot. (b) N.A. (iii) 4. (iv) (a) and (b) 33'×33'. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Good. (ii) N.A. (iii) Yield of pods. (iv) (a) 1957—1958. (b) No. (c) N.A. (v) (a) Mahagarh. (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 638 lb./ac. (ii) (a) 126.4 lb./ac. (b) 134.4 lb./ac. (iii) No effect is significant. (iv) Av. yield of pods in lb./ac.

	R ₁	R ₂	R ₃	R ₄	Mean
S ₁	640	665	615	735	664
S ₂	570	490	715	710	621
S ₃	695	615	620	585	629
Mean	635	590	650	677	638

S.E. of difference of two

1. S marginal means = 44.7 lb./ac.
2. R marginal means = 54.9 lb./ac.
3. R means at the same level of S = 95.1 lb./ac.
4. S means at the same level of R = 93.7 lb./ac.

Crop :- Groundnut (*Kharif*).**Ref :- M.P. 59(6).****Site :- Govt. Seed and Demons. Farm, Mahagarh.****Type :- 'CM'.**

Object :—To find out suitable seed rate and spacing under different levels of N on the yield of Groundnut.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Jowar. (c) N.A. (ii) (a) Medium black cotton soil. (b) N.A. (iii) 6.7.1959. (iv) (a) 3 ploughings. (b) Drilling. (c) and (d) As per treatments. (e) N.A. (v) Nil. (vi) AK.—12—24. (vii) Un-irrigated. (viii) and (ix) N.A. (x) 17.11.1959.

2. TREATMENTS :

All combinations of (1), (2) and (3)

- (1) 3 row spacings : $S_1=12''$, $S_2=18''$ and $S_3=24''$.
 (2) 3 seed rates : $R_1=30$, $R_2=35$ and $R_3=40$ srs/ac.
 (3) 3 levels of N as A/S : $N_0=0$, $N_1=20$ and $N_2=40$ lb./ac.

3. DESIGN :

(i) 3³ confd. (ii) (a) 9 plots/block ; 3 blocks/replication. (b) N.A. (iii) 2. (iv) (a) $36' \times 24'$. (b) $30' \times 18'$. (v) $3' \times 3'$. (vi) Yes.

Object :—To study the effect of number of cuttings on the yield of green fodder.

1. BASAL CONDITIONS :

(i) (a) *Jowar* Berseem. (b) *Jowar*. (c) A/S at 200 lb./ac. (ii) (a) Sandy loam. (b) N.A. (iii) 25.10.1957. (iv) (a) Ploughing and planking. (b) Broadcast. (e) 6 oz./plot. (d) and (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) Nil. (ix) N.A. (x) As per treatments.

2. TREATMENTS :

4 no. of cuttings : C₁=1, C₂=2, C₃=3 and C₄=4

Dates of cutting are : 29.11.1957, 9.1.1958, 9.2.1958 and 9.3.1958 respectively.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) 68'×41'. (iii) 6 (iv) (a) 41'×17'. (b) 38'×14'. (v) 1½'×1½'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Yield of fodder and seed. (iv) (a) 1956—1957. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 13190 lb./ac. (ii) 4813 lb./ac. (iii) Treatment differences are highly significant. (iv) Av. yield of fodder in lb./ac.

Treatment	C ₁	C ₂	C ₃	C ₄
Av. yield	2054	11162	17743	21801

S.E./mean = 1965 lb./ac.

Crop :- Berseem.

Ref :- M.P. 56(8).

Site :- Agri. College Farm, Gwalior.

Type :- 'I'.

Object :—To study the effect of interval and intensity of irrigation on the yield of Berseem.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Berseem. (c) No. (ii) (a) Light loam. (b) N.A. (iii) 22.9.1956. (iv) (a) to (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) Nil. (ix) 2.54". (x) 1st cutting on 8, 9 and 10.11.1956. Another 4 cuttings at equal interval of 1 month.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 intervals of irrigation : I₁=10, I₂=15 and I₃=20 days.

(2) 2 intensities of irrigation : A₁=1 and A₂=2 ac. inches.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 6. (b) N.A. (iii) 3. (iv) (a) 20½'×34'. (b) 16½'×30'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) No. (iii) Yield of seed and fodder. (iv) (a) 1956—1957. (b) Yes. (c) Nil. (v) (a) and (b) N.A. (vi) Heavy rains on 9 and 17.1.1957. (vii) The field had a slight slope. The distribution of water was not uniform.

5. RESULTS :

(i) 61984 lb./ac. (ii) 6678 lb./ac. (iii) Main effects of A and I are highly significant. (iv) Av. yield of fodder in lb./ac.

	I ₁	I ₂	I ₃	Mean
A ₁	67254	50624	47603	55160
A ₂	86113	61300	59012	68808
Mean	76683	55962	53307	61984

S.E. of I marginal mean = 2726 lb./ac.
 S.E. of A marginal mean = 2226 lb./ac.
 S.B. of body of table = 3856 lb./ac.

Crop :- Berseem (Rabi).

Ref :- M.P. 57(21).

Site :- Agri. College Farm, Gwalior.

Type :- 'P'.

Object :- To study the effect of interval and intensity of irrigation on the yield of Berseem.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Sava. (c) Nil. (ii) (a) Sandy loam. (b) N.A. (iii) 15.10.1957. (iv) (a) Ploughing and planking. (b) Broadcast. (c) to (e) N.A. (v) Nil. (vi) N.A. (vii) Irrigated. (viii) Nil. (ix) N.A. (x) 1st cutting 22 to 24.11.1957 and subsequent cuttings at one month interval up to 24.3.1958.

2. TREATMENTS :

All combinations of (1) and (2)

(1) 3 intervals of irrigation : I₁=10, I₂=15 and I₃=20 days.

(2) 3 intensities of irrigation : A₁=1, A₂=2 and A₃=3 acre inches.

3. DESIGN :

(i) Fact. in R.B.D. (ii) (a) 9. (b) 102'×63'. (iii) 3. (iv) (a) 34'×21'. (b) 31'×18'. (v) 1½'×1½'. (vi) Yes.

4. GENERAL :

(i) Good. (ii) Nil. (iii) Yield of fodder. (iv) (a) 1956—1957. (b) Yes. (c) Nil. (v) to (vii) Nil.

5. RESULTS :

(i) 53540 lb./ac. (ii) 9061 lb./ac. (iii) A effect alone is highly significant. (iv) Av. yield of fodder in lb./ac.

	A ₁	A ₂	A ₃	Mean
I ₁	46758	57868	65206	56611
I ₂	40955	63853	64712	56507
I ₃	39602	52456	50453	47504
Mean	42438	58059	60124	53540

S.E. of any marginal mean = 3020 lb./ac.
 S.E. of body of table = 5231 lb./ac.

Crop :- Sannhemp (*Kharif*).**Ref :- M.P. 57(63).****Site :- Govt. Soil Cons. Res. Stn., Phanda.****Type :- 'C'.**

Object :—To find out optimum seed rate for Sannhemp.

1. BASAL CONDITIONS :

(i) (a) to (c) N.A. (ii) (a) Black cotton soil. (b) N.A. (iii) 29.6.1957. (iv) (a) and (b) N.A. (c) As per treatment. (d) and (e) N.A. (v) and (vi) N.A. (vii) Unirrigated. (viii) N.A. (ix) 34.6". (x) 29 and 30.11.1957.

2. TREATMENTS :

3 seed rates : $R_1=20$, $R_2=40$ and $R_3=80$ srs./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 3. (b) $82' \times 37'$. (iii) 4. (iv) (a) $37' \times 26'$. (b) $33' \times 22'$. (v) $2' \times 2'$. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Plant height and grain yield. (iv) (a) to (c) N.A. (v) to (vii) Nil.

5. RESULTS :

(i) 237 lb./ac. (ii) 44.1 lb./ac. (iii) Treatment differences are not significant. (iv) Av. yield of *sannhemp* seed in lb./ac.

Treatment	R_1	R_2	R_3
Av. yield	237	229	245

S.E./mean = 22.0 lb./ac.

Crop :- Wheat and Gram**Ref :- M.P. 54(47).****Site :- Govt. Agri. Res. Farm, Adhartal (Jabalpur).****Type :- 'X'.**

Object :—To study the effect of sowing Wheat and Gram as mixed crops.

1. BASAL CONDITIONS :

(i) (a) Nil. (a) Wheat and Gram. (c) Nil. (ii) (a) *Kabar 2*. (b) N.A. (iii) 21.10.1952. (iv) (a) *Bakhering*. (b) Drilling. (c) As per treatments. (d) and (e) N.A. (v) Nil. (vi) Wheat—A. 90. and Gram—AD. V. (vii) Unirrigated. (viii) N.A. (ix) 4.59". (x) 10, 11.4.1955.

2. TREATMENTS :

6 mixed cropping treatments : T_1 =Wheat and gram sown together in the same row at the rate of 40 lb./ac. each, T_2 =Wheat and gram sown together in the same row each at 80 lb./ac., T_3 =Wheat and gram sown separately wheat in east-west direction and gram in north-south direction each at 40 lb./ac. T_5 =Wheat and gram sown separately wheat in east-west direction and gram in north-south direction each at 80 lb./ac., T_5 =Wheat alone at 80 lb./ac. and T_6 =Gram alone at 80 lb./ac.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 6. (iv) (a) N.A. (b) $40' \times 15'$. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Fair. (ii) N.A. (iii) Yield of grain. (iv) (a) 1950—contd. (b) Yes. (c) Nil. (v) (a) N.A. (b) Nil. (vi) and (vii) Nil.

5. RESULTS :

(i) 51.8 Rs./ac. (ii) 11.1 Rs./ac. (iii) Treatment differences are significant. (iv) Av. money value of produce in Rs./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅	T ₆
Av. money value	49.3	60.4	49.1	63.2	48.0	40.8

S.E./mean = 4.5 Rs./ac.

Mean	97.7	78.6	104.5	96.4	106.7	96.8	93.0	100.6
P ₀	98.0	73.9	95.7	90.0	107.2			
P ₁	97.4	83.4	113.3	102.8	106.3			

S.E. of N or P marginal mean = 2.3 Rs./ac.

S.E. of M marginal mean = 3.7 Rs./ac.

S.E. of body of M×N or M×P table = 5.2 Rs./ac.

S.E. of body of N×P table = 3.3 Rs./ac.

Crop :- Groundnut and Cotton (*Kharif*).

Ref :- M.P. 54(120).

Site :- Instt. of Plant Industry, Indore.

Type :- 'X'.

Object :—To study the economics of interculturing of Cotton and Groundnut and to find out the combination which will give the highest return.

BASAL CONDITIONS :

(i) (a) Nil (b) Wheat. (c) *Moong* type—1 as G.M. (ii) (a) Black cotton soil. (b) Refer soil analysis, Indore. (iii) 3.7.1954. (iv) (a) 1 *bakhering*. (b) Drilling. (c) N.A. (d) $14''$ between rows. (e) N.A. (v) Nil. (vi) Groundnut : A.K. 12—24 and Cotton : *Dhar* 43. (vii) Unirrigated. (viii) 2 hand weedings. (ix) $52.23''$. (x) Groundnut : 24.10.1954 and Cotton : 20.2.1954.

2. TREATMENTS :

4 mixed cropping treatments : T₁=One row of cotton+5 rows of Groundnut, T₂=2 rows of cotton+4 rows of Groundnut, T₃=3 rows of cotton+3 rows of Groundnut and T₄=12 rows of Groundnut only.

3. DESIGN :

(i) R.B.D. (ii) (a) 4. (b) Nil. (iii) 8. (iv) (a) $50' \times 14'$. (b) $1/75$ ac., $1/93$ ac., $1/124$ ac., and $1/62$ ac. for treatments T₁, T₂, T₃ and T₄ respectively. (v) N.A. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) *kapas* and Pod yield. (iv) 1952—Contd. (b) No. (c) Nil. (v) N.A. (vi) Heavy rains in September. (vi) Nil.

5. RESULTS :

(i) 64.1 Rs./ac. (ii) 14.7 Rs./ac. (iii) Treatment differences are highly significant. (iv) Av. money value of produce in Rs./ac.

Treatment	T ₁	T ₂	T ₃	T ₄
Av. money value	54.7	59.7	88.8	53.4

S.E./mean = 5.2 Rs./ac.

Crop :- Groundnut and Cotton (Kharif).**Ref :- M.P. 55(95).****Site :- Instt. of Plant Industry, Indore.****Type :- 'X'.**

Object :—To study the economics of interculturing of Groundnut and Cotton and to find out the combination which will give highest return.

1. BASAL CONDITIONS :

(i) (a) Nil (b) *Jowar*. (c) N.A. (ii) (a) Black cotton soil. (b) Refer soil analysis, Indore. (iii) 22.6.1955. (iv) (a) *Bakhering*. (b) Drilling. (c) N.A. (d) 14" between rows. (e) N.A. (v) N.A. 6 intercropping treatments : T₁=8 rows each of *Arhar*, *Jowar* and *Moong*, T₂=6 rows each of *Arhar* and *Moong* and 12 rows of *Jowar*, T₃=6 rows each of *Jowar* and *Moong* and 12 rows of *Arhar*, T₄=6 rows each of *Jowar* and *Arhar* and 12 rows of *Moong*, T₅=24 rows of *Jowar* alone and T₆=*Jowar*, *Moong* and *Arhar* mixed in the same row.

3. DESIGN :

(i) R.B.D. (ii) (a) 6. (b) N.A. (iii) 6. (iv) (a) 40'×28'. (b) 36'×24'. (v) 2'×2'. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) Yield of grain. (iv) (a) 1958—1959. (b) No. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 266.2 Rs./ac. (ii) 23.5 Rs./ac. (iii) Treatment differences are highly significant. (iv) Av. money value of produce in Rs./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅	T ₆
Av. money value	301.2	293.3	309.4	277.6	144.4	271.1

S.E./mean = 9.6 Rs./ac.

Crop :- Wheat, Gram and Linseed (Rabi).

Ref :- M.P. 58(38).

Site :- Govt. Exptl. Farm, Vidisha.

Type :- 'X'.

Object :—To find out the most suitable mixture of Wheat, Gram and Linseed, which will give the maximum profit to the cultivator against existing local practice of mixed cropping in the same row.

1. BASAL CONDITIONS :

(i) (a) Nil. (b) Wheat. (c) N.A. (ii) (a) Heavy clay. (b) N.A. (iii) 7 and 8.11.1958. (iv) (a) 2 *bakherings*. (b) Line sowing. (c) Wheat : 80 lb./ac. and linseed : 20 lb./ac. (d) 12" between rows. (e) N.A. (v) 10 C.L./ac. of F.Y.M. (vi) Wheat : U—22, Gram : U—24 and Linseed : R.R.—204. (vii) Unirrigated. (viii) 2 weedings. (ix) 3.66". (x) Gram : 6.3.1959, Linseed : 11.3.1959 and Wheat : 14.3.1959.

2. TREATMENTS :

9 mixed cropping treatments : T₁=Wheat alone, T₂=4 rows of Wheat and 4 rows of Gram sown alternately, T₃=4 rows of Wheat and 4 rows of Linseed sown alternately, T₄=4 rows of Wheat, 4 rows of Gram and 4 rows of Linseed alternately, T₅=8 rows of Wheat and 4 rows of Gram alternately, T₆=8 rows of Wheat and 4 rows of Linseed alternately, T₇=8 rows of Wheat, 4 rows of Gram and 4 rows of Linseed alternately, T₈=Wheat and Gram mixed in the same row and T₉=Wheat and Linseed mixed in the same row.

3. DESIGN :

(i) R.B.D. (ii) (a) 9. (b) N.A. (iii) 4. (iv) (a) and (b) 48'×24'. (v) Nil. (vi) Yes.

4. GENERAL :

(i) Satisfactory. (ii) N.A. (iii) Yield of grain. (iv) (a) 1958—N.A. (b) N.A. (c) Nil. (v) (a) and (b) N.A. (vi) and (vii) Nil.

5. RESULTS :

(i) 188.4 Rs./ac. (ii) 22.7 Rs./ac. (iii) Treatment differences are highly significant. (iv) Av. money value of produce in Rs./ac.

Treatment	T ₁	T ₂	T ₃	T ₄	T ₅	T ₆	T ₇	T ₈	T ₉
Av. money value	227.4	201.9	201.2	195.8	213.4	201.7	183.6	153.5	116.8

S.E./mean = 11.4 Rs./ac.

Crop :- Groundnut, Cotton, Wheat and Jowar.

Ref :- M.P. 54(110).

Site :- Instt. of Plant Industry, Indore.

Type :- 'R'.

Object :- To find out the effect of rotation of crops and trace-elements on the yield of Cotton.

1. BASAL CONDITIONS :

(i) (a) Groundnut—Cotton—Wheat—Jowar. (b) As per treatments. (c) Nil. (ii) (a) Black cotton soil. (b) Refer soil analysis, Indore. (iii) N.A. (iv) and (v) N.A. (vi) American Cotton. (vii) Unirrigated. (viii) to (x) N.A.

2. TREATMENTS :

- Control.
 - 18 lb /ac. of Cu as C/S.
 - 15 lb./ac. of Zn. as Zinc Sul.
 - 10 lb./ac. of B as Borax.
- Treatments applied in 1951.

3. DESIGN :

(i) R.B.D. (ii) (a) 4 (in each crop). (b) N.A. (iii) 2. (iv) (a) N.A. (b) 18'×37' for Cotton, 16½'×36' for Groundnut, Wheat and Jowar. (v) N.A. (vi) Yes.

4. GENERAL :

(i) and (ii) N.A. (iii) Pod, *kapas* and grain yield. (iv) (a) 1951—1954. (b) Manurial treatments applied only in the first year. (c) Nil. (v) (a) and (b) N.A. (vi) Nil. (vii) Experiment conducted under Cotton Physiological Scheme.

RESULTS :

(i) to (iv) All figures in lb./ac.

	Groundnut	Cotton (<i>kapas</i>)	Wheat	Jowar
(i)	510	180	816	394

4.	652	195	600	705
S.E./mean	29.8	17.7	44.3	69.3

Crop :- As per treatments.

Ref :- 54 to 59(1).

Site :- Instt. of Plant Industry Indore.

Type :- 'R'.

Object :- To study the effect of organic and inorganic nitrogenous fertilizers on rotation crops and the influence of (a) rotation and (b) frequency of manuring on changes in soil productivity as measured principally by crop yields.

1. BASAL CONDITIONS :

(i) (a) Three course rotation of *Jowar*—*Cotton*—*Wheat*. Four course rotation of *Jowar*—*Groundnut*—*Cotton*—*Wheat*. (b) As per rotation every year. (c) As per scheme. (ii) (a) Black cotton soil of medium fertility. (b) Soil samples are taken after completion of each rotation but analysis not completed as yet.

(iii)	Year	Kharif	Rabi
	1954	29.6.54 to 1.7.54	22.10.54
	1955	24, 25.6.55	22 and 24.10.55
	1956	29, 30.6.56	19 and 20.10.56
	1957	1, 2.7.57	10 and 11.10.57
	1958	26, 27.6.58	29.10.58
	1959	2 to 4.7.59	7.11.59
	1960	25.6.60	17.10.60
	1961	20, 21.6.61	17 and 18.11.61
	1962	9, 10.7.62	20.10.62
	1963	11, 12.7.63	10.10.63
	1964	5 to 10.7.64	26 and 27.10.64.

(iv) (a) *Bakherings* every year before sowing. (b) Sowing with two coultered *desi* drill, drawn by bullocks with a distance of 14 inches between two adjoining rows, every year for *rabi* and *kharif* crops.

(c)	Crop	Seed Rate	
	<i>Jowar</i>	10 lbs. per acre	} Every year
	<i>Groundnut</i>	50 lbs. per acre	
	<i>Cotton</i>	20 lbs. per acre	
	<i>Wheat</i>	60 lbs. per acre	

(d) 14 inches between rows and 6 to 9 inches between plants within rows for *kharif* crops. (e) All crops are bulk sown. (v) No. (vi) Bhoj (*Dhar-43*) for cotton, I.P.I.-3 for *jowar*, C-591 for wheat and AK-12-24 for groundnut. (vii) Unirrigated. (viii) Two or three weeding and inter-culturings with *khurpi*, *daura* and Indore ridger for *kharif* crops.

(ix)	Rainfall for <i>kharif</i> crops i.e. total rainfall for five months viz. June July, August, Sept. and October.			Total rainfall for the whole year	
	1954	...	51.05 inches	...	51.84 inches
	1955	...	41.15 "	...	43.41 "
	1956	...	24.73 "	...	26.81 "
	1957	...	25.86 "	...	26.34 "
	1958	...	42.43 "	...	43.73 "
	1959	...	56.13 "	...	57.41 "
	1960	...	33.44 "	...	36.88 "
	1961	...	57.71 "	...	60.12 "
	1962	...	42.40 "	...	45.37 "

18.	G	O	O	G	X	O	O
19.	O	G	O	O	X	G	O
20.	O	O	G	O	X	O	G
21.	G	G	O	G	X	G	O
22.	G	O	G	G	X	O	G
23.	O	G	G	O	X	G	G
24.	G	G	G	G	X	G	G

Above are 24 main-plot treatments where F=Manuring with F.Y.M., S=Manuring with A/S, G=Manuring with G.N.C. and O=No manure. Frequency of manuring used as per scheme given above. The sequence of manurial treatments, in two way tables of results start from 1947, as for example, the treatment combination OOF indicates that O is applied in 1947, O in 1948 F in 1949 and again O in 1950 and so on.

Each plot is divided in 3 sub-plots and following treatments given : $M_1=20$ lb./ac. of N, $M_2=20$ lb./ac. of P_2O_5 and $M_3=20$ lb./ac. of N+20 lb./ac. of P_2O_5 .

Groundnut crop in the four course rotation is left unmanured and the symbol is X.

3. DESIGN :

(i) (a) Split-plot. (ii) (a) 24 main-plots/replication ; 3 sub-plots/main-plot. (b) $116'8'' \times 162'$ for each crop. (iii) 2. (iv) (a) $9'4'' \times 27'$. (b) $4'8'' \times 22'$. (v) Two guard rows on either side of each crop plot. (vi) Randomisation at the starting time of the experiment and are continued as per scheme.

4. GENERAL :

(i) No lodging. (ii) No incidence of pests. (iii) Height of random plants in *jowar* and wheat crops for statistical study and average yield. (iv) (a) Long term duration. Started in *kharif* season of 1947 and is in progress still. (b) The crop plots are same every year as per crop rotation and manuring as per scheme. (c) Nil. (iv) (a) and (b) No. (vi) Nil. (vii) In expressing S. E.s., main-plots have been denoted by M while sub-plots by S.

5. RESULTS :

JOWAR Rotation I Year 1954

(i) 482 lb./ac. (ii) (a) 391.4 lb./ac. (b) 322.3 lb./ac. (iii) None of the effect is significant. (iv) Av. yield of grain in lb./ac.

Control = 340 lb./ac.

JOWAR Rotation II Year 1954

(i) 494 lb./ac. (ii) (a) 196.2 lb./ac. (b) 335.2 lb./ac. (iii) Manures and 2 np vs. (n+p) are significant. (iv) Av. yield of grain in lb./ac.

Control = 327 lb./ac.
